Welcome!

Thank you for stopping by.

This website is a reflection of the many experiences that have shaped my life—from decades of teaching psychology and working with colleagues around the world to discovering new passions through travel, digital art, interior design, and activities of interest that promote lifelong learning.

I've always believed that curiosity is one of life's greatest gifts. Whether exploring another culture, creating digital artwork, designing beautiful spaces, or simply appreciating a quiet sunset, I continue to find inspiration in everyday experiences.

I invite you to browse, explore, and perhaps discover something that speaks to you as well.

Warm regards,

Richard S. Velayo, Ph.D.

About Me

Life's most meaningful journeys often begin with a simple curiosity to learn, explore, and grow.

I'm **Richard S. Velayo, Ph.D.**, Professor Emeritus of Psychology at Pace University in New York City. Welcome to my website—a place where I've brought together the different chapters of my life, the work that has shaped me, and the interests that continue to inspire me.
For more than three decades, my **academic journey** centered on teaching psychology, mentoring students, conducting research, and collaborating with colleagues around the world. My professional interests in international psychology, education, and cross-cultural understanding gave me opportunities to learn from people and perspectives far beyond the classroom.
Retirement opened a new chapter—**life beyond academia**. I now have more time to travel, explore new cultures and places, pursue creative interests, and simply remain curious about the world around me. I've discovered that leaving the classroom didn't mean leaving learning behind; it simply gave learning a different form.
At the same time, I've become increasingly interested in **my roots**—the people, places, experiences, and Filipino heritage that helped shape who I am. Looking back has given me a greater appreciation for where my journey began, while traveling and exploring continue to remind me how much there is still to discover.
This website brings these parts of my life together. Whether you're a former student or colleague, a fellow traveler, or simply a curious visitor, I invite you to explore. I hope you'll find something here that informs, inspires, or perhaps simply brings a smile.
Thank you for stopping by. I'm glad you're here.

Warm regards,

Richard S. Velayo, Ph.D.

My Academic Journey

A Lifetime of Learning, Teaching, and Service

For more than three decades, I had the privilege of teaching psychology, mentoring students, conducting research, and serving in leadership roles at Pace University. My work also provided opportunities to collaborate with psychologists and educators around the world, reinforcing my belief that psychology is strengthened by diverse perspectives and cultural understanding.

Although I have retired from full-time teaching, I remain deeply grateful for the experiences, friendships, and collaborations that shaped my career. This section highlights the academic journey that has been such an important part of my life.

Education is not simply about sharing knowledge—it's about inspiring curiosity that lasts a lifetime.

Explore this section to learn more about my academic career, publications, presentations, leadership, and professional service.

Life Beyond Academia

A New Chapter of Discovery

Retirement has given me the freedom to pursue many of the interests that have inspired me throughout my life. In addition to psychology, I enjoy traveling, photography, digital artwork, architecture, interior design, and mindfulness.

Every new place, experience, and creative project reminds me that learning never truly ends. This section reflects the personal side of my journey and the joy of continuing to explore the world with curiosity and gratitude.

Retirement is not the end of learning; it is the beginning of learning by choice.

My Roots

Honoring My Heritage

My Filipino heritage has been an important influence throughout my life, shaping my values, appreciation for education, and sense of family and community.

Exploring my ancestry has become a meaningful way to honor those who came before me and to better understand my own journey. I hope this section offers a glimpse into the family history and traditions that continue to inspire me today.

Our roots tell us where we began, but they also help us understand where we're going.

Academic

For me, education has never been simply about teaching—it has always been about inspiring curiosity and opening doors to new possibilities.

A Lifelong Commitment to Learning

Education has been one of the greatest privileges of my life. Throughout my academic career, I had the opportunity to teach and mentor students, pursue research and scholarship, and contribute through leadership and service. Each of these experiences reinforced my belief that learning is a lifelong journey—one that grows through curiosity, collaboration, and the exchange of ideas.

Teaching and mentoring gave me the opportunity to encourage curiosity and help students discover their own potential. **Research and scholarship** allowed me to explore questions about psychology, culture, education, and learning. And through **leadership and service**, I was fortunate to contribute to my university, my profession, and the broader international psychology community.

Together, these three dimensions tell the story of my academic journey. I invite you to explore them below and learn more about the experiences, people, and ideas that shaped my career.

Quick Links

Teaching & Mentoring

Inspiring Curiosity Through Education

Teaching was always much more than sharing information—it was about encouraging students to ask questions, think critically, and discover their own potential. Whether in the classroom, advising students, or developing innovative learning experiences, my goal was to create an environment where curiosity could flourish.

The opportunity to learn alongside my students remains one of the most rewarding aspects of my academic career.

Research & Scholarship

Exploring Questions That Matter

Research allowed me to better understand human behavior while contributing to the advancement of psychology. My interests have included areas such as cross-cultural psychology, international psychology, teaching and learning, and the thoughtful integration of technology in teaching and learning.

.

For me, research has always been about more than publishing findings—it's about asking meaningful questions, expanding knowledge, and encouraging continued exploration.

Leadership & Service

Giving Back to the Profession

Service has been an important and rewarding part of my professional journey. Beyond teaching and research, I was fortunate to contribute through leadership, committee work, professional organizations, mentoring, and collaborations with colleagues around the world.

These experiences strengthened my appreciation for the importance of community, shared purpose, and working together to advance psychology and higher education.

Academic Biography - At a Glance

Richard S. Velayo, Ph.D.

Professor Emeritus of Psychology

Pace University, New York City

Richard S. Velayo, Ph.D., is Professor Emeritus of Psychology at Pace University in New York City. During a career spanning more than three decades, his work encompassed teaching, research, academic leadership, international collaboration, and professional service. He retired from full-time teaching in 2017, but his longstanding interests in psychology, education, international and cross-cultural perspectives, and lifelong learning continue to shape his interests today.

Academic Leadership (Select)

During his tenure at Pace University (1994–2017), Dr. Velayo served as:

- Associate Chair, Psychology Department (NYC Campus)
- Director, Master of Arts in Psychology Program (2014–2017)
- Director, Dyson College Center for Global Psychology
- Editor-in-Chief, *Psychfye* (Department Newsletter)

He previously taught at:

- De La Salle University (Manila)
- Montana State University
- University of Michigan (Ann Arbor)

Scholarly Contributions (Select)

Dr. Velayo's scholarship focuses on:

1. Development of assessment tools for multimedia learning
2. Applications of Internet-based technologies (IBTs) in teaching and research
3. Pedagogical strategies to internationalize the psychology curriculum

He has authored:

- 47 peer-reviewed journal articles
- 4 book chapters
- 30+ non-peer reviewed publications
- 305+ scholarly presentations
- 78+ workshops, panels, and invited addresses
- 120+ organized symposia and conferences

His work has appeared in leading journals including:

- *American Psychologist* (APA flagship journal)
- *Teaching of Psychology*
- *Psychology Learning and Teaching*
- *Educational Technology*
- *International Psychology Bulletin*
- *International Psychologist*

He has supervised over 60 doctoral dissertations and master's theses.

Courses Taught

Graduate and undergraduate courses include:

- Experimental Psychology
- Cognitive Psychology
- Instructional Psychology: Multimedia Applications
- Research Design and Statistics
- Psychology of Learning
- Developmental Psychology
- Behavior Modification
- Critical Thinking and Problem Solving
- Introduction to International Psychology
- Psychology at the United Nations
- Professional Seminar

Honors and Awards (Select)

Dr. Velayo's honors include:

- Virginia Staudt Sexton Award for Early Career Contributions (1997)
- Distinguished Service Award, NYSPA (2002)
- Wilhelm Wundt Award for Outstanding Research and Service (2007)
- Distinguished Award for Outstanding Service, Pace University (2000)
- Guest of Honor, Greater New York Conference on Behavioral Research (2012)
- Henry P. David International Mentoring Award, APA Division 52 (2013)

Professional Affiliations and Leadership (Select)

Dr. Velayo is a Fellow of multiple divisions of the American Psychological Association (Divisions 1, 2, 46, and 52), as well as the Eastern Psychological Association. His service includes:

- Past President, APA Division 52 (International Psychology)
- Past President (twice), NYSPA Academic Division
- Past Chair, Psychology Section, New York Academy of Sciences
- Chair, Communications and Publications Committee, International Council of Psychologists
- Co-Director, International Social and Behavioral Research Alliance
- NGO Representative to the United Nations (2009–2017)

He has served in numerous leadership roles involving curriculum development, publications, international psychology, fellows committees, and United Nations psychology initiatives.

International Psychology

Every culture has something to teach us, and every international experience broadens our understanding—not only of psychology, but also of ourselves.

Psychology in a Global Community

"Psychology becomes even more meaningful when we learn from one another across cultures and around the world."

Psychology does not exist in isolation. It is shaped by culture, history, language, and the unique experiences of people around the globe. International psychology encourages us to look beyond national boundaries, embrace diverse perspectives, and work collaboratively to address shared global challenges.

Whether you're a student, educator, researcher, or practicing psychologist, I hope this section inspires you to explore how psychology can contribute to a more connected, compassionate, and culturally informed world.

Featured Resource #1: PSYCHOLOGY ATLAS

I created the Psychology Atlas and its interactive Google My Maps as resources to help psychology educators incorporate international and cross-cultural perspectives into their courses. By exploring these maps, teachers can discover psychologists, organizations, heritage sites, conferences, and global initiatives that bring psychology to life from a worldwide perspective.

Explore Psychology Atlas

Featured Resource #2: The Handbook of International Psychology

Bullock, M., Stevens, M. J., Wedding, D., & Clinton, A. (Eds.). (2024). *The Handbook of International Psychology* (2nd ed.). Routledge.

I found *The Handbook of International Psychology* to be a comprehensive and valuable overview of how psychology has developed and is practiced across countries and cultures around the world. I particularly appreciated its international and cross-cultural perspective, which illustrates how history, culture, social conditions, and political contexts influence psychological research, education, training, and professional practice, while reinforcing the importance of understanding psychology as a truly global discipline.

Recommended Resources for teaching INTERNATIONAL PSYCHOLOGY

Contained here is a collection relevant resources I use in teaching "Introduction to International Psychology", a graduate level course at Pace University (NYC).

A Course on "International Psychology"

Syllabus (sample)
This sample syllabus was used in a 15-week online (asynchrounous) course last offered in the Spring 2025 semester at Pace University (NYC campus) in which the textbook above was used. Instructors may use this syllabus as a basis from which to develop their own.

Quick Links to Books Chapters

Below are the sections of the textbook that comprise the contents of this course. Each contain resources and materials relevant to key topics about international psychology.

International Psychology?

International psychology is more than studying psychology in different countries—it is about understanding how psychological science and practice can contribute to addressing the opportunities and challenges that affect people around the world.

As our world becomes increasingly interconnected, psychologists have unique opportunities to promote well-being, advance human rights, strengthen education, and collaborate across cultures. This section introduces the growing field of international psychology and highlights the many ways psychologists can make a meaningful global impact.

Intro. to Global Psychology

Global psychology provides a roadmap for applying psychological knowledge to today's most pressing international issues. From advocacy and leadership to research, teaching, and service, psychologists have many opportunities to contribute beyond traditional professional roles.

The following sections introduce ten areas in which psychology can make a meaningful difference, while encouraging collaboration, cultural humility, and responsible global engagement.

Advocacy

Advocacy gives psychologists an opportunity to apply their knowledge in support of human dignity, social justice, education, mental health, and other issues affecting communities around the world. By combining scientific evidence with compassion and ethical responsibility, psychologists can help influence positive change at both local and global levels.

Assessment

Assessment extends well beyond testing and diagnosis. In international settings, psychologists use assessment to better understand individuals, communities, educational systems, and organizations while ensuring that methods remain culturally appropriate and scientifically sound.

Thoughtful assessment provides the foundation for effective decision-making, research, and intervention across diverse populations.

Consultation

Psychological expertise can benefit governments, schools, businesses, nonprofit organizations, healthcare systems, and international agencies. Consultation allows psychologists to work collaboratively with diverse organizations, offering evidence-based guidance that helps improve programs, policies, and services around the world.

Intervention

Psychological interventions promote resilience, well-being, and positive change for individuals, families, organizations, and communities. In global settings, successful interventions require cultural sensitivity, collaboration, and an appreciation for local values, traditions, and resources.

Effective intervention is not simply about applying existing knowledge—it is about adapting that knowledge to meet the unique needs of each community.

Leadership

Leadership in psychology involves more than managing organizations—it means inspiring collaboration, encouraging innovation, and helping others work toward shared goals. Around the world, psychologists contribute their expertise to strengthen institutions, resolve complex challenges, and promote positive organizational change across cultures.

Policy

Psychologists can make valuable contributions to public policy by applying research and psychological science to important societal issues. Whether working with governments, educational institutions, healthcare systems, or international organizations, psychologists help shape policies that improve the lives of individuals and communities.

This section explores how psychological knowledge can inform thoughtful, evidence-based decision-making on a global scale.

Research

International research expands our understanding of human behavior by bringing together diverse cultures, perspectives, and experiences. Collaborative research not only strengthens psychological science but also helps ensure that discoveries are relevant to people around the world.

This section explores opportunities for psychologists to engage in meaningful international research partnerships and contribute to solving global challenges.

Service

Professional service is one of the most rewarding ways psychologists can contribute beyond the classroom or consulting office. Through volunteerism, leadership, international organizations, and community engagement, psychologists can use their knowledge to support meaningful change while building lasting professional relationships around the world.

Service reflects psychology's commitment to improving lives through collaboration, compassion, and shared purpose.

Teaching

Teaching offers a unique opportunity to prepare the next generation of globally minded psychologists. By incorporating international perspectives, diverse cultural viewpoints, and innovative learning experiences, educators help students develop the knowledge, skills, and cultural awareness needed to thrive in an increasingly interconnected world.

For me, internationalizing the teaching of psychology has been one of the most meaningful and rewarding aspects of my career.

Concluding Thoughts

Psychology has the potential to make a meaningful difference far beyond the boundaries of any one country. As our world continues to evolve, opportunities for international collaboration, cultural understanding, and global engagement will become increasingly important.

I hope the resources and ideas presented throughout this section encourage students, educators, researchers, and practitioners to think more globally, embrace diverse perspectives, and recognize the many ways psychology can contribute to building a healthier, more compassionate, and more connected world.

Life & Interests

Retirement has given me the freedom to pursue many of the interests that have inspired me throughout my life. Every new experience reminds me that learning doesn't end—it simply takes new and exciting directions.

While psychology and education will always be an important part of who I am, retirement has opened the door to new opportunities for exploration, creativity, and personal growth. Today, I enjoy traveling, cruising, digital artwork, interior design, architecture, personal finance, genealogy, and the practice of mindfulness.

Whether I'm discovering a charming coastal town, photographing a beautiful sunset, designing a welcoming living space, or simply enjoying a quiet cup of coffee while reflecting on life's experiences, I continue to find inspiration in the people, places, and moments that surround me.

The pages in this section offer a glimpse into the interests that enrich my life beyond academia. Together, they reflect my belief that curiosity, lifelong learning, and meaningful experiences continue to shape who we are—at every stage of life.

I hope these pages encourage you to celebrate your own interests, embrace new experiences, and continue discovering the joy of lifelong learning.

Digital artwork allows me to preserve moments of discovery and share the beauty I find in everyday life.

My digital artwork explores structure, color, and spatial balance through a lens shaped by psychology and global experience. Working primarily with digital composition, I am drawn to contrasts—abstraction and order, geometry and emotion, interior stillness and expansive landscapes.

These works are not simply visual experiments but reflections on perception, cultural memory, and aesthetic harmony. Influenced by travel, architecture, and curated design environments, I approach each composition as both observer and constructor—seeking balance, clarity, and quiet resonance.

The gallery reflects a lifelong engagement with visual form as another language of reflection.

Reflections (Archive)

Life is a continuous journey of learning, growth, and discovery. These reflections share some of the experiences, lessons, and perspectives that have shaped my personal and professional life.

These monthly reflections are inspired by my journey as an educator, psychologist, traveler, and lifelong learner. Each offers a brief pause to consider an idea, an experience, or a lesson that has shaped my life and continues to inspire me.

I hope these reflections encourage you to pause, reflect, and discover something meaningful in your own journey.

August 2026 – *Inspiring Discovery*

"A meaningful life is measured not only by what we accomplish, but by what we inspire others to discover."

— Rich Velayo

July 2026 – *The Journey Begins with Curiosity*

Every journey begins with curiosity. Whether we are exploring a new country, learning a new language, or simply seeing the familiar with fresh eyes, we continue to grow. Some of life's greatest rewards come not from reaching a destination, but from remaining open to the people, places, and ideas we encounter along the way.

— Rich Velayo

June 2026 – *Trying Something New*

Some of life's greatest adventures begin with a simple question: "What if I tried something new today?" Curiosity encourages us to step beyond the familiar and discover opportunities we might otherwise have missed.

— Rich Velayo

May 2026 – *The Joy of Learning*

Education is not simply about acquiring knowledge; it is about developing the curiosity and wisdom to use that knowledge well. Lifelong learning keeps our minds open and our lives continually enriched.

— Rich Velayo

April 2026 – *Growing Every Day*

Spring reminds us that growth is often quiet. Small steps taken consistently can transform our lives in ways we never expected. Curiosity and patience often lead to our greatest discoveries.

— Rich Velayo

March 2026 – *Travel as a Teacher*

Travel teaches us that the world is both larger and smaller than we imagine—larger in its beauty and diversity, yet smaller in the kindness shared between people. Every journey leaves us with memories, friendships, and a deeper appreciation for different cultures.

— Rich Velayo

February 2026 – *The Gift of Connection*

The strongest connections in our lives are built not only through love and friendship, but also through kindness, understanding, and genuine curiosity about one another. Every meaningful conversation has the potential to broaden our perspective.

— Rich Velayo

January 2026 – *New Beginnings*

A new year reminds us that learning has no finish line. Every beginning offers another opportunity to grow with curiosity, purpose, and gratitude. Each day presents a chance to discover something new about ourselves and the world around us.

— Rich Velayo

My Roots

Learning about our roots helps us better understand ourselves and appreciate the journeys of those who came before us.

Taking Pride in My Heritage

My heritage is rooted in the Philippines, a country whose history reflects centuries of cultural exchange and resilience. The Philippines has been shaped by indigenous traditions as well as Spanish and American influences, creating a unique cultural blend that values family, education, community, and respect for others. Growing up in Quezon City, in the Manila metropolitan area, I experienced firsthand the energy and diversity of Filipino life — a place where modern urban living exists alongside strong cultural traditions. The richness of Filipino culture, from language and food to social values and community ties, helped shape my early understanding of identity and belonging in a world influenced by many cultures.
I remain deeply proud of my Filipino heritage, which has instilled in me a lasting appreciation for cultural diversity and human connection. At the same time, I have fully embraced my life as an American citizen, grateful for the opportunities for education, professional growth, and global engagement that the United States has provided. In many ways, my life reflects the blending of these two worlds — the cultural roots of the Philippines and the opportunities and perspectives of America — and this dual identity has strongly influenced both my personal outlook and my professional commitment to international and cross-cultural understanding.

TEACHING

Explore representative course syllabi and reflections that illustrate my approach to teaching, student learning, and psychology education throughout my academic career.

My teaching interests center on international and cross-cultural psychology, integrating global perspectives into undergraduate and graduate education courses, and developing students' critical thinking and research skills. Throughout my career, I have been committed to innovative pedagogy, curriculum internationalization, and preparing students to apply psychological knowledge thoughtfully in diverse and global contexts.

Courses Taught

The following list summarizes the undergraduate, graduate, and doctoral courses I taught during my academic career, organized chronologically by institution and appointment.

Course syllabus (most recent) for some courses available for download in PDF. (Scroll further down this page to access.)

2017 – 2020
Part-time
Psychology Department, Pace University, NY

Graduate:
- Introduction to International Psychology (Master's) NEW
  - Link to my International Psychology Webpage
- Instructional Psychology: Multimedia Applications (Master's) NEW
- Psychology at the United Nations (Master's) NEW

1994 – 2017
Full-time
Psychology Department, Pace University, NY

Graduate:
- Human Learning (Master's) NEW
- Psychological Research Methods (Master's) NEW
- Research Design and Statistics II (Master's)
- Cognitive Psychology (Master's) NEW
- Psychology of Personality (Master's)
- Instructional Psychology: Multimedia Applications (Master's)
- Mentored Lab Class (1 and 2) (Master's)
- Independent Study (Master's) NEW
- Professional Seminar (Master's) NEW
- Instructional Psychology: Technology (Master's)
- Psychology at the United Nations (Master's)
- MA Thesis (Master's) NEW
- Advanced Seminar: Theories and Applications (Doctoral) NEW
- Doctoral Seminar: Year 1 (PSY8104) and Doctoral Research Colloquium (PSY8105) (Doctoral) NEW

Undergraduate:
- General Psychology I NEW
- General Psychology II NEW
- Experimental Psychology I NEW
- Experimental Psychology II NEW
- Cognition, Perception, Motivation, and Mind Fields
- Cognitive Psychology
- Mentored Lab Class (1 and 2)
- Senior Seminar, Ms NEW
- Independent Study

2000 – 2005
Part-time
School of Computer Science and Information Systems, Pace University, NY

Undergraduate
(These three courses offered through the NACTEL's (National Coalition for Telecommunications Education and Learning) Associate of Science in Applied Information Technology and the Accelerated Criteria B.S. in Telecommunications degree programs.)
- Critical Thinking and Problem Solving
- Psychology of Personal Adjustment
- Psychology of Learning (NACTEL Program, Pace University) NEW

1992 – 1994
Full-time
Psychology Department, Monterey State University, Bozeman, MT

Undergraduate:
- Introductory Psychology
- Thinking Skills: (Critical Thinking Skills and Cognitive Psychology)
- Introductory Psychology (as a secondary course)
- Developmental Psychology
- Behavior Modification
- Independent Study

1989 – 1992
Psychology Department, University of Michigan, Ann Arbor

Undergraduate: (as a Graduate Research Assistant)
- Introduction to Psychology
- Learning to Learn (Cognitive and Motivational Psychology)

1986 – 1988
Part-time
Psychology Department, University of the Pacific, Stockton, CA

Undergraduate: (as a Graduate Teaching/Research Assistant)
- Experimental Psychology

1984 – 1985
Part-time
Department of Psychology and Behavioral Sciences, De La Salle University, Manila, Philippines

Undergraduate:
- Introductory Psychology (as a Lecturer)
- Introduction to Sociology (as a Lecturer)
- Industrial Psychology and Human Engineering (as an Undergraduate Teaching Assistant)

Course Syllabi (in PDF)

During my tenure at Pace University, I taught undergraduate and graduate courses in psychology at several institutions. The syllabi below illustrate my approach to course design, student learning, and assessment. While policy and schedules changed from semester to semester, these documents provide a representative snapshot of my teaching philosophy and expectations.

[NOTE: These syllabi are presented as historical documents reflecting the courses I taught during the indicated semester. University policies, textbooks, prerequisites, and schedules may have changed since then.]

Graduate Courses (Master's and Doctoral)

#1 - Introduction to International Psychology (MA)
Spring 2019
PSY636 syllabusSpr2019.pdf
Adobe Acrobat Document [163.6 KB]
Download

This graduate-level online course entails reading, discussing, and writing about a variety of contemporary topics in the relatively new specialty of international psychology. You will examine mainstream as well as alternative theoretical, methodological, and applied approaches that are relevant to the study and practice of international psychology. The topics selected offer a broad and deep understanding of this field, specifically, an appreciation of psychology's relevance to the understanding and solution of global problems, as well as of how psychology itself is affected by worldwide events and forces.

- Link to my International Psychology Webpage

#2 - Instructional Psychology: Multimedia Applications (MA)
Summer 2 2017
PSY636 syllabusSum2017.pdf
Adobe Acrobat Document [209.4 KB]
Download

This 3-credit web-enhanced (online) course is designed as an advanced learner course in instructional design principles associated with learning from media (text, visual, and audio presentations) and the application of these principles in designing multimedia instruction for effective learning and teaching. Drawing from years of research in cognitive science and educational psychology, this course provides materials based on the cognitive theory of multimedia learning and principles for the design of multimedia presentations. It aims to help students realize the potential of multimedia instruction for effective learning and teaching and to understand the research that underlies this potential. Students learn about the basic principles of multimedia instructional design and to demonstrate their knowledge by completing a multimedia project that adheres to these principles.

#3 - Psychology at the United Nations
Fall 2015
PSY645 syllabusFall2015.pdf
Adobe Acrobat Document [168.9 KB]
Download

The United Nations (UN) is a complex, somewhat mythical world which serves as the meeting ground for political powers from around the world. It is a place where international relations are conducted, and where the fate of the world is in the balance. Psychology's relevance to the UN is therefore unique and important rule in the global community. "Global" is a word that is used to refer to issues and concerns of two or more countries. While not always successful in implementation, the UN does provide a forum for the discussion of issues, the development of international agreements, and the coordination of the activities of nations, and the role of psychology and psychologists at the United Nations. Guest speakers who are active in the United Nations will be invited to speak to the class. Students will be assigned UN-relevant topics to present in class.

#4 - Human Learning (MA)
Fall 2005
PSY715 syllabusFall1999.pdf
Adobe Acrobat Document [321.8 KB]
Download

This course introduces both basic and advanced principles and theories of learning and motivation, including cognition, Conditioning, Behavior Modification, Internalization and discrimination, information processing, and complex cognitive functioning are some of the topics discussed. Research on learning theory and their general application in a variety of contexts will be covered.

#5 - Research Design and Statistics II (MA)
Spring 2016
PSY616 syllabusSpr2016.pdf
Adobe Acrobat Document [295.3 KB]
Download

This is an intensive three-hour per week graduate course that will introduce you to psychological research design, descriptive and inferential statistical techniques in psychology, and other topics pertinent to conducting research in psychology. The major objectives of this course are to learn how to design, conduct, and report the results of psychological research. Students will also learn how to use inferential and descriptive statistical information, and to develop the critical thinking skills to determine when and how to use a particular statistical technique given a specific research problem.

#6 - Cognitive Psychology (MA)
Spring 2014
PSY626 syllabusSpr2014.pdf
Adobe Acrobat Document [280.9 KB]
Download

This graduate-level course examines cognitive processes, often called "higher mental processes." Cognitive psychology includes topics such as perception, memory, language, and thinking. This course will give you an appreciation of research and theory in cognitive psychology, an understanding of the methods used to gather and evaluate evidence about cognitive processes, and an understanding of the ways in which knowledge of these processes has been applied to solve problems and improve the quality of life. Through this course requires a fairly sophisticated background in psychology, it will begin with a basic overview of cognition. Discussion of key research on cognition is covered. Note that much of the research in cognitive psychology is methodologically complex, especially because of the challenge of assessing covert mental processes.

#7 - Personality Theories (MA)
Spring 2011
PSY625 syllabusSpr2011.pdf
Adobe Acrobat Document [263.8 KB]
Download

This graduate-level course provides an overview of current thinking and research about personality. Personality psychology includes topics such as personality development, personality assessment, and personality theories. Personality theories include psychodynamic, humanistic, biological and other relevant factors (interpersonal, contextual, and developmental), and assessment. This course will give you an appreciation of research and theory in personality psychology, an understanding of the methods used to gather and evaluate evidence about personality constructs, and an understanding of the ways in which knowledge of these constructs has been applied to various settings. Though this course requires a fairly sophisticated background in psychology, it includes a basic overview of personality theory. Discussion of key research on personality theories and research is covered.

#8 - Independent Study (MA)
Spring 2016
PSY699 syllabusSpring2016.pdf
Adobe Acrobat Document [142.6 KB]
Download

This course requires the student to (1) Select a relatively specific topic/project you are interested in and that is flexible to do conduct a research on. The supervising faculty must approve your chosen topic/project, (2) Survey and gather the relevant research on the topic. Most of the related articles should be recent and published in psychological literature/journals, (3) Summarize the research trends on the topic and site the research literature, and (4) Identify three suggestions for future research based on your paper that may be pursued based on the research literature you have surveyed.

#9 - Professional Seminar (MA)
Fall 2016
PSY698 syllabusFall2016.pdf
Adobe Acrobat Document [205.1 KB]
Download

The purpose of this non-credit bearing course developed for students in the MA in Psychology program is to develop skills for life-long learning and professionalism. Important criteria by which Graduate Programs are assessed for their effectiveness in preparing young professionals in life-long learning and skills that including professional networking, mentorship, and professionalism.

#10 - 6th Thesis (MA)
PSY6MA3MA Thesis syllabus.pdf
Adobe Acrobat Document [152.7 KB]
Download

With the approval of the appropriate faculty member and coordinator of the MA in Psychology Program in Chairperson, students may conduct an original research project with the supervision of a faculty member. The student meets and regularly consults with the faculty member to provide guidance and to review progress on the research project. A research paper must be submitted upon completion of the course.

#11 - Psychology of Learning (MA/PsyD)
PSY715 syllabusFall2015.pdf
Adobe Acrobat Document [1.2 MB]
Download

This course is intended to provide students with information regarding major theories of learning (e.g., social cognitive, cognitive developmental, information-processing, behavioral). The first half of the course will focus on basic principles of behavior modification and its application to educational instruction and psychological interventions. The second half of this course will present the basic principles of various learning theories. Consideration will be given to how the principles discussed relate to effective teaching and learning.

#12 - Doctoral Project Seminar + Doctoral Project Colloquium (PsyD)
Spring 2014
PSY8104-8105syllabusSpr2014.pdf
Adobe Acrobat Document [81.3 KB]
Download

PSY8104 - Doctoral Project Seminar (Psy.D.)
This seminar provides a structured framework for the completion of the Psy.D. doctoral project. Issues regarding the statistical analyses and interpretation of research findings are of primary concern for discussion. Research results are presented to faculty and peers and are rigorously critiqued. The completion of the Psy.D. doctoral project is contingent upon faculty approval.
Prerequisite: PSY8104

PSY8105 - Doctoral Colloquium (Psy.D.)
This seminar provides a structured framework for the completion of the Psy.D. doctoral project. Issues regarding the statistical analyses and interpretation of research findings are of primary concern for discussion. Research results are presented to faculty and peers and are rigorously critiqued. The completion of the Psy.D. doctoral project is contingent upon faculty approval.
Prerequisite: PSY8104

Undergraduate Courses

#13 - General Psychology I (Undergraduate)
PSY115 syllabusSum1 2006-Online.pdf
Adobe Acrobat Document [154.5 KB]
Download

An introduction to the science and profession of psychology including coverage of research, cognitive abilities, human development, personality, testing and assessment, abnormal psychology, treatment of psychopathology, health and wellness, personality, abnormal psychology, social cognition, and social influence.

#14 - General Psychology II (Undergraduate)
PSY115 syllabusFall2015.pdf
Adobe Acrobat Document [117.9 KB]
Download

An introduction to the science and profession of psychology including coverage of research, cognitive abilities, human development, personality, testing and assessment, abnormal psychology, treatment of psychopathology, health and wellness, personality, abnormal psychology, social cognition, and social influence.

#15 - Experimental Psychology I (Undergraduate)
PsyBK syllabusFall2015.pdf
Adobe Acrobat Document [152.1 KB]
Download

This is an intensive, six hours per week course that introduces research methodology in psychology. It will include theoretical and practical aspects of behavioral research. The primary activity for this seminar will be the development of an original scientific research proposal. You will conduct the research and complete the research paper based on this proposal when you take PSY301: Experimental Psychology 2. For the following spring semester, Blackboard will be utilized to help disseminate announcements, archive course materials, supplement instruction, and update grades.

#16 - Experimental Psychology 2 (Undergraduate)
PsyBK syllabusSpr2016.pdf
Adobe Acrobat Document [160.1 KB]
Download

This is an intensive six hours per week course that aims to develop critical thinking skills in psychological research and to carry out the research proposal you have developed in PSY280. In PSY280, there is greater focus on the use of the SPSS statistical software. The primary activity for this seminar will be the completion of an original scientific research study and to present it at a formal undergraduate psychology conference. Blackboard will be utilized to help disseminate announcements, archive course materials, supplement instruction, and update grades.

Special Topics

#17 - Immersion 101 (Undergraduate)
Fall 2000
PsyBK syllabusFall2000.pdf
Adobe Acrobat Document [205.7 KB]
Download

This course is designed for first-year undergraduate students. It aims to:
• To help make the transition into college life easier.
• To help pick a major course of study and/or affirm the major that you have chosen.
• To develop a sense of community among the students and faculty.
• To develop time management, decision making and critical thinking skills.
• To help one be more mature and be more responsible.
• To be able to bond with Pace through closer advisement and interaction with your peers and peer leaders.

#18 - Psychology of Learning (NACTEL Program)
Fall 2004
PSY320syllabusFall2004.pdf
Adobe Acrobat Document [220.4 KB]
Download

This graduate-level course examines cognitive processes, often called "higher mental processes." Cognitive psychology includes topics such as perception, memory, language, and thinking. This course will give you an appreciation of research and theory in cognitive psychology, an understanding of the methods used to gather and evaluate evidence about cognitive processes, and an understanding of the ways in which knowledge of these processes has been applied to solve problems and improve the quality of life. Though this course requires a fairly sophisticated background in psychology, it will begin with a basic overview of cognition. Discussion of key research on cognition is covered. Note that much of the research in cognitive psychology is methodologically complex, especially because of the challenge of assessing covert mental processes.

A Final Reflection

Looking back, teaching has been one of the most rewarding aspects of my academic career. If these syllabi or course materials inspire even one educator to adapt an idea or encourage one student to explore psychology more deeply, then they have continued to serve their purpose beyond the classroom.

RESEARCH

Research begins with curiosity. Asking thoughtful questions, exploring new ideas, and sharing knowledge have been among the most rewarding aspects of my academic journey.

My research interests focus on international psychology, cross-cultural understanding, and the global application of psychological knowledge to promote well-being and social responsibility. I enjoy exploring how psychological concepts, culturally responsive frameworks, and the practical orientation of research intersect meaningfully local and global issues.

Prior to my retirement in 2017, my research focused on the internationalization of psychology education, with particular emphasis on helping instructors integrate international perspectives into undergraduate and graduate psychology curricula.

- Internationalizing Psychology Courses: Identifying effective pedagogical strategies to internationalize psychology courses.
- Assessment: Developing a set of assessment tools for an international psychology course.
- Educational Technology: Applying Internet-based technologies (IBTs) as teaching and research tools to help infuse international perspectives into psychology courses.

This research projects generally involve the design and development of online surveys, identification of pilot sites for measures (e.g., instructors, courses, multimedia materials), and curriculum-based applications of IBTs. Students who have been involved in his research are provided with training in the ethical conduct of human research, data management, and data analysis. Students who have been absent or have traveled extensively or other countries are especially welcome.

My publications are organized below by publication type. Stakeholders PDFs are provided whenever available. Additional publications and citation information are also available through the Google Scholar profile. ORCID: https://orcid.org/0000-0002-0000-0000 Scholar

A Final Reflection

Research is ultimately a conversation that extends beyond the time and place in which it was conducted. By preserving these publications, I hope they remain accessible to future students, educators, researchers, and anyone interested in the ideas they contain.

SERVICE (Selected Positions)

Working alongside colleagues around the world taught me that some of life's greatest discoveries come through collaboration, service, and learning from one another.

My service interests center on advancing international psychology through leadership, advocacy, and collaboration while professionally representing my field. I also have a strong commitment to culturally informed practice, fostering international partnerships, and promoting psychological knowledge as meaningful service at local, national, and international levels.

Throughout my career, service has been an extension of my teaching and research. Whether mentoring students, collaborating on professional organizations, or helping shape the future of psychology through governance, I remain committed to strengthen the profession and support the broader psychological community.

Many of these service activities tied directly to collaborative publications described on my Research page.

Several of these service activities also illustrate my commitment to development of the courses described on my Teaching page.

Service at a Glance

- Leadership in national and international psychological organizations
- University committees and program service
- Peer review and manuscript editorships
- Conference planning and professional presentations
- Faculty, student, and international mentoring
- Community outreach and professional development

Academic and Professional Psychology Organizations

American Psychological Association (APA) (FULL MEMBER)

The Relationship between 'OCEAN' Personality Dimensions, Demographics, and Online Dating Attitudes and Behaviors
Author: Karen Marks Pinto (Completed August 2013)

Importance of Parenting Behaviors in an Early Childhood Separation Program
Author: Hope Baker (Spring 2014)

Religious Identity, Perceived Discrimination, and Psychological Well-Being in Sikh Americans
Author: Gurleen Saini (Completed Spring 2014)

Program Evaluation of Positive Behavior Intervention System (Gender and Setting as Variables)
Author: Rotem Dayan (Completed Spring 2014)

Examining the Relationship Between On-line Gaming and Perceptions of Parenting
Author: Smith Kidkarndee (Completed Summer 2014)

Multidimensional Assessment of Psychologists' Multicultural Competency
Author: Tanya Regis (Completed Summer 2014)

Women's Fashion Styles: Personality and Shopping Behavior vs. Feeling of Objectification
Author: Maria Corazon Reano (Masters Thesis) (Completed Fall 2014)

Screening for Developmental Delay in At-Risk Children: Ages and Stages Questionnaire in an Adolescent Primary
Author: Jordan Zelinger (Completed Fall 2014)

Social Cues in a Textual World: Impact on Comprehension and Perceived Understanding
Author: Jenicka Hornung (Completed Spring 2015)

Parenting Childhood Victims of Sexual Abuse: A Comparative Study of Mothers With and Without Histories as Victims
Author: Talia Kaplan (Completed Fall 2015)

Spiritual Well-Being and Entheongen Substance Therapy: An Explorative Survey-Based Study of Individual's Level of Spiritual

Well-Being and Their Attitude towards the Use of Entheogenic Substances (Masters Thesis) (Completion pending)
Author: Wallis Back (Completed Fall 2015)

Memory for Concept Pairs as a Function of Bimodality Type, Educational Background, and Culture
Author: Michael Trush (Completed Summer 2016)

⭐ Other Service Activities

Cattell Award Dissertation Competition

- Reviewer, "James Cattell Dissertation Award" for the Psychology Section of the New York Academy of Sciences. Reviewed finalist for this award. Dissertations reviewed were from Psychology-Department endorsed outstanding dissertations from the U.S. and other countries. (2000 – 2017)

PSYCHE Speakers Bureau (APA Divisions 1 and 52)

- Member, "PSYCHE Speakers Bureau" Team. This APA project involved the construction of a zip-code ordered document containing geographic network of 200 outstanding psychology experts in diverse specialties across North America, who are prepared to visit area schools or community groups to speak on their topics of expertise. (2007 – present)

International Psychologists at Work: A Video

- Member, "International Psychologists at Work" is a video project of the APA Division of International Psychology to produce on videotape several interviews and feature events while attending various international psychology conferences (2007 – 2010).

National Institute on the Teaching of Psychology

- Member, "Textbook Donation Initiative" from the National Institute on the Teaching of Psychology (2007 - 2011).

Division of International Psychology, American Psychological Association

- Sponsor, "Adopt a Psychologist Program" Initiative, International Liaisons Committee (Adoptee: Dr. Ivana Petrovic, Servia) (2005 - 2006)

United Nations – NGO Committee on Ageing

- Co-Chair, 16th Annual Celebration of the International Day of Older Persons (October 5, 2006)
- Editor and Producer, Proceedings of the 14th Annual Celebration of the International Day of Older Persons (2004 – 2014)

American Psychological Association, Washington, DC

- Co-Chair, Committee on Divisions and APA Relations (2010)
- Member, Committee on Divisions and APA Relations (2005 - 2009)
- Member, Task force on the Internationalization of the Psychology Curriculum (2004 - 2005)

Chinese American Planning Council Volunteer Faculty, New York, NY

- Faculty Supervisor and Mentor, Asian American high school students in the NYC area (2004)

A Final Reflection

Service has always been about contributing to something larger than oneself. Whether through professional organizations, mentoring, editorial work, or university committees, I have valued every opportunity to support colleagues, students, and the discipline of psychology.

HONORS

Explore the honors, awards, grants, fellowships, and distinctions that marked significant milestones throughout my academic career.

Throughout my academic career, I have been honored to receive honors, awards, grants, fellowships, and other forms of recognition from universities, professional associations, and philanthropic organizations. These recognitions reflect my contributions to teaching, research, and service within psychology and related fields, and I have deeply grateful for the colleagues, students, and organizations that made these experiences possible.

Selected Distinguished Honors

- APA Fellow
- APA Divisional Fellow
  - Division 1 (General Psychology and Interdisciplinary Inquiry)
  - Division 2 (Society for the Teaching of Psychology)
  - Division 46 (Media Psychology and Technology)
  - Division 52 (Society for Global Psychology)
- Fellow, Eastern Psychological Association
- Wilhelm Wundt Award
- Henry P. David International Mentoring Award
- Virginia Slouth Senior Award
- Pace University Teaching or service awards
- APA Presidential recognitions

Early Academic Honors (1985–1994)

- Magna Cum Laude
- Outstanding Undergraduate Thesis
- Phi Kappa Phi Honor Society
- Fordham Fellowship
- Dissertation Fellowship
- Dissertation Grants
- APA Students Fund Award
- Science Directions Award

Professional Recognition and Growing Scholarship (1995–2003)

- Virginia Slouth Senior Award
- University Distinguished Service Award
- Phi Eta Research Award
- Phi Eta Grant Award
- Travel Grants
- Early Mentoring Awards
- NYSPA Distinguished Service Award

National Leadership and Professional Recognition (2004–2010)

- APA Fellow
- Division Fellowships
- Division Travel Grants
- Presidential Awards
- Eastern Psychological Association Fellow
- Dissertation Grants
- International Council of Psychologists Awards

International Leadership and Recognition (2011–Present)

- Henry P. David Award
- APA Presidential Recognition
- International Grants
- Travel Grants
- CODAPSY Grant
- Teaching Online Recognition
- New York Academy of Sciences Appreciation Award

Professional Fellowships

- American Psychological Association
- Eastern Psychological Association
- Society for the Teaching of Psychology (Division 2)
- Media Psychology and Technology (Division 46)
- Society for Global Psychology (Division 52)
- Eastern Psychological Association

Research and Faculty Development Grants

- Pace University Summer Research Grants
- Scholarly Research Grants
- Human Fund Awards
- Faculty Development Grants
- APA Division Grants
- Internationalizing the Curriculum Grant
- Learning Assessment Grant

Professional Recognition

- Marquis Who's Who
- Marquis Who's Who Leaders of the 21st Century
- Outstanding Scientists of the 21st Century
- America's Registry of Outstanding Professionals
- Deans' Distinguished Educators
- Sweetmore's Who's Who

Complete List [Honors/Awards/Grants/Recognitions]

2018

- APPRECIATION AWARD, New York Academy of Science, Psychology Steering Committee (New York City, April 2018)

2017

- Recipient, Certificate of Completion/Recognition, "Teaching Online Seminar Program", Pace University (August 2017)

2016

- Recipient and Rubrics Team Member, 2016 CODAPSY Committee on Divisions and APA Relations/International Grant from the American Psychological Association (Collaborative grant between APA Division 1, 2, and 52. Project title: "International Expansion in Project Syllabus" (Collaborative project between Division 2 (Society for the Teaching of Psychology) Division 52 (Division of International Psychology), and Division 1 (Society for General Psychology)

Richard S. Velayo, Ph.D.
Professor Emeritus of Psychology
Pace University, New York City

Richard S. Velayo, Ph.D., is Professor Emeritus of Psychology at Pace University (New York City). He happily retired in Florida (Orlando Metro area) in 2017 though occasionally teaches online graduate courses. When he was a full-time tenured full professor at Pace University, he served as Associate Chair of the Psychology Department (NYC) and Director of the Master of Arts (M.A.) in Psychology Program from 2014-2017. In 1993, he obtained his doctorate in the Combined Program in Education and Psychology from the University of Michigan (Ann Arbor), and specialized in the areas of Cognitive Psychology and Educational Technology. He obtained his M.A. degree in Applied Behavioral Analysis from the University of the Pacific (Stockton, CA), a B.A. in Psychology / B.A. in Sociology-Anthropology from De La Salle University (Manila, Philippines) (Magna Cum Laude), and at Colegio de San Juan de Letran (Manila, Philippines) for his elementary and high school education. His scholarly interests and publications focus on pedagogical strategies to internationalize the psychology curriculum, and on the use of multimedia and internet-based technologies as pedagogical tools. More specifically, his scholarly interests included: (1) development of an assessment tool for multimedia learning, (2) applications of Internet-based technologies (IBTs) as teaching and research tools, and (3) pedagogical strategies to internationalize psychology courses. He has 47 peer-reviewed publications in journals such as American Psychologist (the flagship journal of the American Psychological Association (APA), Teaching of Psychology, The International Journal of Instructional Media, Journal of Instructional Psychology, Reading Improvement, NYS Psychologist, Educational Technology, Psychology Learning and Teaching, International Psychology Bulletin, and the International Psychologist. He also has 4 book chapters and 30 non-peer reviewed publications. Moreover, he has 305+ scholarly presentations, 78+ workshops/panels/invited addresses, 120+ symposia/conferences organized at various regional, national, and international psychology conferences including (but not limited to) those of the American Psychological Association (APA), the American Psychological Society (APS), the Eastern Psychological Association (EPA), the National Institute on the Teaching of Psychology (NIToP), the International Council of Psychologists, and the Greater New York Conference on Behavioral Research. He has also been involved in the supervision of over 60 doctoral dissertations and masters theses.

The courses he has taught at the graduate and undergraduate levels include Experimental Psychology, Cognitive Psychology, Instructional Psychology: Multimedia Applications, Research Design and Statistics, General Psychology, Psychology of Learning, Developmental Psychology, Behavior Modification, Critical Thinking and Problem Solving, Introduction to International Psychology, Psychology at the United Nations, and Professional Seminar (for Masters Students). Dr. Velayo has taught at De La Salle University (Manila), Montana State University, University of Michigan (Ann Arbor), before coming to Pace University (New York City Campus) in 1994 as a full-time faculty member of the Psychology Department. In addition to being the Editor-in-chief of the “PsychEye” newsletter (official newsletter of Pace University’s Psychology Department, NYC), he was also an editorial board member of the International Psychologist and International Understanding. He has also served as a reviewer for a number of publications which includes the following: International Psychology Bulletin (APA Division 52), International Journal of Instructional Media, Journal on School Education, and Computers in Teaching Section of the Teaching of Psychology (APA Division 2). The New York State Psychological Association awarded him the Virginia Staudt Sexton Award for Early Career Contributions to Academic Psychology (1997), the Distinguished Service Award (2002), and the Wilhelm Wundt Award for Outstanding Research Contributions to Academic Psychology and Service to NYSPA (2007). He is also the recipient of the 2000 Distinguished Award for Outstanding Service at Pace’s Employee Recognition Ceremony. In 2012, he was recognized as a “Guest of Honor” for Outstanding Contributions to Psychology at the 24th Annual Greater New York Conference on Behavioral Research (Fordham University, New York). In 2013, he received the "Henry P. David International Mentoring Award" from the Division of International Psychology of the American Psychological Association.

His professional service affiliations include: the American Psychological Association (Fellow of Divisions 1, 2, 46, and 52), the International Council of Psychologists (ICP), International Association of Applied Psychologists (IAAP), the New York Academy of Sciences (NYAS), the New York State Psychological Association (Academic Division and the Social Issues Division), the Eastern Psychological Association (Fellow), PSI CHI (The International Honors Society in Psychology), and Sigma Xi (The Scientific Research Society). He was Past-President (2004), and Member-at-Large (2008-2009) for the Division of International Psychology (Division 52) of the APA in which he has also served as chair of the Membership Committee, Program Committee, the Website Committee, Associate Editor of the International Psychology Bulletin, and an active Member of its Curriculum and Training

Committee. His other positions include Fellows Chair (2005-2007) for The Society for General Psychology (APA Division 1), Fellows Chair (2008) for The Division of International Psychology (APA Division 52), Chair (2006-2009) of the Communications and Publications Committee for the International Council of Psychologists (ICP) (2006-2009), served twice as Past-President (2001 and 2008) of the New York State Psychological Association's Academic Division, Past-Chair (2006-2008) of the Psychology Section of the New York Academy of Sciences, Past Co-Chair (2009) of APA's Committee on Divisions/APA Relations (CODAPAR), and Member-at-Large for the NGO Committee on Ageing (2007-2009), and Executive Committee Member (2009-2012) of the Eastern Regional PSI CHI Steering Committee. He has served as the Chair of the Publication and Registration Subcommittee for the United Nations Psychology Day Organizing/Planning Committee. At Pace University, he is the Director of Masters Program(s) and Associate Chair of the Psychology Department (NYC campus). Additionally, he has served as the Secretary and Webmaster (2000-2005) of the New York Faculty Council, Chair (2000-2001) of the Academic Resources Committees of Dyson College and NY Faculty Council, and Chair (January 2000 - August 2002) of the Communication Studies Department (NYC campus) of Pace.

Dr. Velayo also served as the NGO Representative (2009-2017) of the International Council the International Council of Psychologists to the United Nations, Treasurer (2009-2013) of the NGO Committee on Ageing, Webmaster (2005-2014), Fellows Chair and Member-at-Large of the Society for General Psychology (2012-2014), Curriculum and Training Committee Chair and Member-at-Large for the International Psychology Division of APA (2012-2016), Liaison of the Eastern Psychological Association to Pace University's Psychology Department (2010-2016), and one of the three Co-Directors (2010-2017) of The International Social and Behavioral Research Alliance. At Pace, in addition to being the Associate Chair of the Psychology Department and Director of the M.A. in Psychology Program (2014 - 2017), he also serves as a Director of the Dyson College Center for Global Psychology (DCCGP), a member (2004-2017) of the Kenan Development Fund Committee for Faculty Development, and a Fellow (2000-present) of the Dyson College Society of Fellows.

VIDEO: Maryam N. Tafreshi, Ph.D.: What is international psychology?
https://www.youtube.com/watch?v=LuQhS53OhWA
Dr. Tafreshi was born in Iran before emigrating to the United States. Although she grew up during the Iran and Iraq war, she experienced a closeness with her family in Iran. In addition to Iran and the U.S., she has lived in Chile, Brazil, Singapore, China, and Dubai. This experience has contributed to her completing her Ph.D. in International Psychology from The Chicago School as well as her work as a faculty member in mind-body medicine at Saybrook. Dr. Tafreshi discusses multicultural understanding, development of initiatives related to improved health and wellbeing to those around the globe.

Annual Psychology Day at the United Nations

Psychology Day at the United Nations is a celebration of psychology in the context of the UN. It provides an opportunity for psychology to share with U.N. Permanent Missions, U.N. Agencies, NGOs and the private sector the activities of psychologists at the U.N. and the role of psychology in addressing concerns of global importance.

19th Annual Psychology Day at the U.N. (April 23, 2026)
Theme: *Psychological Contributions to Fostering Collective Action in Uncertain Times*
Webcast Link: https://youtu.be/Mc4Rps_GdM?si=JjjuNBHS1Rd2b01Z

18th Annual Psychology Day at the U.N. (April 24, 2025)
Theme: *From Crisis to Growth: Psychological Contributions to Building Global Resilience*
Webcast Link: https://youtu.be/mXgtqG9fRoY?si=vJdXBnxtH7rO1Ws

17th Annual Psychology Day at the U.N. (April 25, 2024)
Theme: *Reducing Global Inequalities Through Education: Psychological Contributions*
Website Link: https://psychologycoalitionun.org/psychology-day-un/

16th Annual Psychology Day at the U.N. (April 27, 2023)
Theme: *Psychological Contributions to Global Peace, Conflict Resolution and Equity*
Webcast Link: https://youtu.be/A4mA9nYNa5U

15th Annual Psychology Day at the U.N. (April 21, 2022)
Theme: *Building Hope: Contributions to a Roadmap for Climate Change*
Webcast Link: https://www.youtube.com/watch?v=hQwXPt28mz4U

14th Annual Psychology Day at the U.N. (April 15, 2021)
Theme: *Psychological Contributions to Building Back Better In A Post-Pandemic World*
Webcast Link: https://youtu.be/z9xR-99lvEs

13th Annual Psychology Day at the U.N. (May 27, 2020)
Theme: *UN75: The Multilateralism We Want: Psychological Contributions to Building Bridges Among and Within Nations*
Webcast Link: https://register.gotowebinar.com/recording/viewRecording/6161065434192697099/5678870212515006466/takoosh@aol.com?registrantKey=3357184339558304524&type=ATTENDEEEMAILRECORDINGLINK

12th Annual Psychology Day at the U.N. (April 25, 2019)
Theme: *The Time is Now: Psychological Contributions to Global Gender Equality*
Webcast Link: https://media.un.org/en/asset/k1m/k1mc9dj0a6

11th Annual Psychology Day at the U.N. (April 12, 2018)
Theme: *Climate Change: Psychological Interventions, Promoting Mitigation and Adaptation*
Webcast Link: https://media.un.org/en/asset/k1q/k1q67mfo3p

Suggested Discussion Questions:

1. Watch the video - "What is International Psychology" and How Can Students Get Involved".
Link to video - https://www.youtube.com/watch?v=oENWIDiFIic
What did you find most interesting in this video? Explain why.

2. In what way do you think this course may be valuable to you given your educational and professional goals?

3. Do you think that the courses you have taken in psychology have sufficient "international" content (e.g., cross-cultural comparisons between cultures/countries, non-Western psychology, psychologists abroad)? Briefly explain.

VIDEO: The Handbook of International Psychology
https://www.youtube.com/watch?v=-mePoypMcGU
Edited By Merry Bullock, Michael Stevens, Danny Wedding, Amanda Clinton This second edition of The Handbook of International Psychology chronicles the discipline of psychology as it evolves in different regions, from the perspective of those living and working in the countries they write about. This comprehensive handbook is essential for students and teachers of psychology, as well as professionals wanting to develop their understanding of psychology around the world. "This is a substantially updated, expanded, and enhanced edition of the dated Handbook of International Psychology. It now reflects the global spectrum of modern psychology. The four distinguished editors have direct deep knowledge of the substantial variations in how psychology developed, is conceived, situated, and practiced around the world and have structured the contributions of international authors to capture these features as well as their commonalities. Readers will benefit from learning how varied are the organizations and practices of psychology. This important seminal work belongs on every psychologist's desk."

Suggested Discussion Questions:

1. The textbook editors wrote the introductory section of the textbook (pp. 3 – 13). Which of the following parts of this section (pick only 1) did find most interesting or intriguing? Explain why. [NOTE: Indicate which one (a), (b), or (c) you picked to respond to.]
(a) Going Global in the Past, Present, and Future
(b) Going Global as Psychology and Psychologists: Realizing Our Promise and Potential
(c) Concluding by Beginning: How Will you Meet a World of Need?

2. Test your knowledge of where countries are located on a world map.
Link - https://lizardpoint.com/geography/world-countries-magnifier-quiz.php?qid=1806
There are three modes in which you may take this test – practice, test, and strict test. It's up to you which mode to take. After you take this test, assess your performance. How well did you do? Do you think others in class may have done better (or worse) than you? Mention some of the interesting things you learned after having done this activity.

TOPIC: ASSESSMENT: The Power and Potential of Psychological Testing, Educational Measurement, and Program Evaluation Around the World

Professor's Brief Video Introduction:
https://drive.google.com/file/d/1oSHJXF5Or9vhlrcw2YXxCFs6epsAxzA5/view?usp=drive_link

Assigned Reading/s: CHAPTER 2, pp. 37 - 58 [Shealy, Bullock, & Kapadia (Eds.) (2023)]

Supplementary Materials:

ARTICLE: Global and regional perspectives on testing children: An Empirical Study
https://onlinelibrary.wiley.com/doi/10.1080/00207594108246857
The results of an international survey of test use in 44 countries are reported. Data are presented and discussed for six groupings: highly industrialised, less industrialised Western, developing Third World, socialist, Middle East, and least developed nations. A total of 740 tests were identified. A number of similarities exist among the six groupings in their test use. Intelligence tests are most commonly used followed by personality and achievement tests. Important differences also exist. For example, the developing Third World and Middle East nations use more group than individually administered tests and fewer achievement tests. Many tests lack reliability and validity studies and norms. Additional tests are needed to assess achievement, intelligence, social development, personality, and vocational interests and aptitudes. Tests are especially needed for children and youth who are learning disabled, mentally retarded, and slow learners. Problems created by these conditions and implications of the frequent use of foreign developed tests are discussed.

ARTICLE: Beyond Western, Educated, Industrial, Rich, and Democratic (WEIRD) Psychology: Measuring and Mapping Scales of Cultural and Psychological Distance
https://journals.sagepub.com/doi/full/10.1177/0956797620916782
In this article, we present a tool and a method for measuring the psychological and cultural distance between societies and creating a distance scale with any population as the point of comparison. Because psychological data are dominated by samples drawn from Western, educated, industrialized, rich, and democratic (WEIRD) nations, and overwhelmingly, the United States, we focused on distance from the United States. We also present distance from China, the country with the largest population and second largest economy, which is a common cultural comparison. We applied the fixation index (F_{ST}), a meaningful statistic in evolutionary theory, to the World Values Survey of cultural beliefs and behaviors. As the extreme WEIRDness of the literature begins to dissolve, our tool will become more useful for designing, planning, and justifying a wide range of comparative psychological projects. Our code and accompanying online application allow for comparisons between any two countries. Analyses of regional diversity reveal the relative homogeneity of the United States. Cultural distance predicts various psychological outcomes.

ARTICLE: Top ten standardized tests used internationally with children and youth by school psychologists in 64 countries: A 24-year follow-up study
https://journals.sagepub.com/doi/10.1177/0734282915595303
This article provides a 24-year update on the 10 standardized tests used most frequently with children and youth by school psychologists. Data were acquired from 64 countries through an international survey, with one respondent from each country. The informants were solicited due to their expertise in the area of assessment. The data from the current 2013 survey are described and discussed as well as contrasted with the 1989 survey data. The 2013 survey data led to the following rank order of tests based on data from the 64 countries: the Wechsler Intelligence Scales for Children, Ravens Progressive Matrices, Wechsler Preschool and Primary Scales of Intelligence, Child Behavior Checklist, Bender–Gestalt Test, Child and Adult Apperception Tests, Kaufman Assessment Battery for Children, Draw-a-Person Test, Stanford–Binet Intelligence Scales, and the Wechsler Adult Intelligence Scales. Survey data from advanced, developing, and emerging counties also are compared and discussed. Results are discussed in the broader context of international test development and use.

BOOK: The ITC International Handbook of testing and assessment
https://academic.oup.com/book/1027
Embedded within the globalization movement, the internationalization of testing and assessment has encouraged scholars, professionals, and practitioners to work together to enhance our research and practice in the cross-cultural context. The International Test Commission (ITC) was formed to serve this need. The ITC seeks to facilitate the exchange of information among members and stimulate cooperation on problems related to the construction, distribution, and use of psychological tests and other psycho-diagnostic tools. The ITC has also sought to advance knowledge and best practices related to international testing by the publication of guidelines and of a journal, the *International Journal of Testing*. Consistent with these aims, the executive council of the ITC decided to launch a Handbook to present a state-of-the-art review on international testing. *The ITC International Handbook of Testing and Assessment* has been published to address the many challenges facing the cross-cultural applications of psychological and educational testing in this era of globalization. It also represents and showcases the concerted efforts of the ITC in tackling the wide range of problems and complexities in international psychological testing. Finally, the *Handbook* has been designed to provide information and resources to help guide professionals and graduate students regarding testing and assessment from an international and global perspective.

BOOK: Clinical Assessment in International Settings
https://academic.oup.com/book/1027/chapter-abstract/137929813?redirectedFrom=fulltext
The adaptation of psychological tests that were developed in one language and country into a different language and culture is expanding in contemporary international psychological assessment. This chapter addresses the need for psychological tests to be carefully developed in order to be effectively employed in cultures and languages different from their country of origin. Before a psychological test, based upon item content from the initial culture, can be adapted in other cultures, it is important to assure that linguistic equivalence has been attained through effective translation and adaptation procedures. Several psychometric procedures that are crucial to developing effective test adaptation are provided in this chapter, such as the strategy of using multiple translations to ensure general accuracy, doing a careful back-translation study, conducting a bilingual test-retest evaluation of translated items and scales to further ensure translation accuracy, developing appropriate in-country norms, and conducting external validation of tests.

BOOK: Assessment: The power and potential of psychological testing, educational measurement, and program evaluation around the world.
https://psycnet.apa.org/record/2023-04288-003
Assessment is a broad, globally relevant, and much-needed area of inquiry and practice—with tremendous power and potential. Psychologists are leaders and experts in assessment, with specialized knowledge in research design; statistics; and, of course, psychological testing, measurement, and evaluation. This chapter discusses assessment broadly, focusing on its centrality to psychology and research. It also discusses contemporary national assessment practices considering the "big four" specialties: clinical, counseling, school, and industrial/organizational psychology. The chapter presents basic competencies, including what applied psychologists do in the United States. It discusses three important international assessment topics: psychological testing, educational measurement, and program evaluation. The chapter explains cross-cultural issues in assessment, including test translation and adaptation. It highlights challenges, opportunities, and cutting-edge exemplars, including therapeutic assessment, formative educational testing and item development, and transformative program evaluation. The chapter offers practical suggestions for developing global assessment competencies and participating in the international assessment community. (PsycInfo Database Record (c) 2024 APA, all rights reserved)

BOOK CHAPTER: Positive Psychological Assessment in an Increasingly Diverse World.
https://psycnet.apa.org/record/2003-02181-003
The purpose of this chapter is to discuss our capacity to assess positive characteristics of individuals from all populations and to examine the interpretation and generalizability of these findings from one culture to another. Specifically, we will review the history of cross-cultural psychological assessment, issues related to cross-cultural measurement, and the applications of positive psychological constructs across cultures. Finally, we will describe a model for positive psychological assessment with cross-cultural populations and provide recommendations for future developments in the assessment of positive psychological constructs. (PsycInfo Database Record (c) 2024 APA, all rights reserved)

DOCUMENT: Going International: A Practical Guide for Psychologists Book 2: Engaging in International Collaborative Research
https://www.apa.org/international/resources/publications/research.pdf
The goal of this booklet is to provide an introductory guide for U.S. based psychologists, graduate students and early career psychologists interested in pursuing international research opportunities. It is written to help span the gap between knowledge of sound research practices, knowledge of local ethical and regulatory processes, and the application of that knowledge in international collaborative research.

WEBPAGE: The Standards for Educational and Psychological Testing
https://www.testingstandards.net/open-access-files.html

The Testing Standards is a joint product of the American Educational Research Association *(AERA)*, the American Psychological Association *(APA)* and the National Council on Measurement in Education *(NCME)*. Published collaboratively by the three organizations since 1966, it represents the gold standard in guidance on testing in the United States and many other parts of the world.

Suggested Discussion Questions:

1. Pages 50 – 54 is about "Developing Global Assessment Competencies". The authors pointed out nine (9) of the most important skills in developing such competencies (See Exhibit 2.1 on page 51). Which one (1) do you find most interesting or relevant? Explain why AND give your own unique example (hypothetical or not).

2. Watch this brief video titled "The Myth of Culture Fair Tests". What do you find interesting or intriguing in relation to the use of standardized psychological testing/assessment? Explain why.

Assigned Reading/s: CHAPTER 3, pp. 59 - 74 [Shealy, Bullock, & Kapadia (Eds.) (2023)]

Supplementary Materials:

ARTICLE: Introduction to the Special Issue on International Organizational Consulting: Consulting Psychology Goes Global
https://www.apa.org/pubs/journals/features/cpb-a0031584.pdf
This Special Issue of the Consulting Psychology Journal: Practice and Research on "International Organizational Consulting: Consulting Psychology Goes Global" provides highlights of experienced practitioner consulting psychologists' work in a variety of multinational contexts. A brief description of the context for the Special Issue is provided, followed by an outline of the articles the special issue contains. Questions addressed by the articles include the following: how do the assumptions of organizational consulting psychology as taught and practiced in the United States need to be changed when applied to individual, group, and organizational consultation in other countries? Are there issues specific to international organizational consulting psychology different from those addressed by existing cross-cultural psychology findings? How do practicing consulting psychologists learn how to negotiate international consulting projects from start to finish? What kind of overarching templates are useful when entering a new country of international practice?

ARTICLE: Frontier No More: International Consulting Skills as Necessary Minimal Competencies for Consulting Psychologists
https://www.researchgate.net/publication/263937931_Frontier_no_more_International_consulting_skills_as_necessary_minimal_competencies_for_consulting_psychologists
This article identifies and comments on several themes that derive from the Special Issue on International Organizational Consulting: Consulting Psychology Goes Global. Six issues are identified that are intended to help integrate the Special Issue articles and to extend the four factors each article addressed: (1) how can we generalize from cases to actionable propositions?; (2) does corporate culture trump national culture?; (3) Is country an individual difference variable?; (4) are there international metacompetencies that consulting psychologists must know?; (5) who or what is the ethical arbiter in international contexts?; and (6) how can international organizational consulting psychology skills become routinized?

WEBSITE: Society of Consulting Psychology (APA Division 13)
https://www.societyofconsultingpsychology.org/

ARTICLE: Global Consulting in a Culturally Diverse World: Ethical and Legal Implications
https://psycnet.apa.org/doiLanding?doi=10.1037%2Fa0031675
This article presents an overview of the ethical and ethically related legal dilemmas faced by organizational consultants in global environments. It describes the critical factors that make the practice of global consulting complex, ambiguous, and challenging. It offers recommendations as to organizational strategies, guiding principles, and competencies that can help global consultants better navigate the ethical maze their clients face, or that they themselves face as they work with diverse cultures and organizations. We analyze the root cause of failures by global organizational management consultants and consider the difficulty of determining the right approach for all stakeholders within the broader global system.

BOOK CHAPTER: Consulting Psychology in the Business World
https://academic.oup.com/book/1321/chapter-abstract/140303209?redirectedFrom=fulltext
Consulting psychologists working in the private sector of the business world have many roles. This chapter discusses several types of business consulting engagements. The differences between psychotherapy practice and business consulting are explained. Case illustrations are supplied based on the authors' more than 30 years of experience. Information is given about the type of additional training required to become a consultant. Topics covered are executive coaching, leadership development, family business consulting, executive selection, team building, leadership succession, organizational analysis and design, mergers and acquisitions, and strategic planning.

BOOK: Internationalizing the Curriculum in Organizational Psychology
https://www.researchgate.net/publication/296341860_Internationalizing_the_Curriculum_in_Organizational_Psychology
Since the days of silk roads and spice routes, international commerce has been essential to business. Today, from air travel to the Internet, advances in technology have served to make the business world smaller. Yet, despite the real world's march towards globalization, organizational psychology as an academic discipline has yet to incorporate these developments into its degree programs. Internationalizing the Curriculum in Organizational Psychology counters this resistance with a flexible floor plan to bring practical cross-cultural content into education and training. An expert international panel offers guidance on key aspects of curriculum design, including subject matter, learning objectives, competencies, and experiential learning, with here-and-now global insights and business as well as pedagogical savvy. The approach is far from monolithic, as these diverse contributors challenge readers to embrace complexity, surprise, and the inevitable humorous moments that come with cultural exchanges. Among the areas featured: Meaningfully applying cultural knowledge. The dominance of Western perspectives and assumptions. Core competencies for the cross-cultural curriculum. Tools for implementing internationalism in course content. Educational models from abroad. Internationalizing faculty development. For faculty and administrators in industrial/organizational psychology, organizational behavior, work psychology, and applied psychology programs who wish to incorporate an international component to their curriculum or courses, Internationalizing the Curriculum in Organizational Psychology occupies the ground floor of the next major paradigm shift.

DOCUMENT: Guidelines for Education and Training at the Doctoral Level in Consulting Psychology (CP)/Organizational Consulting Psychology (OCP)
https://www.apa.org/about/policy/education-training.pdf

VIDEO: Industrial/Organizational Psychology and Globalization
https://study.com/academy/lesson/video/industrial-organizational-psychology-globalization.html
Globalization is an increasingly important concept to businesses today. In order to compete, a business must consider its world-wide markets and be aware of cultural differences. Inclusiveness in the workplace helps a business reach beyond its borders and become more successful. Businesses with international presences often use virtual teams who may rarely meet in person but work together using modern technology. Industrial/organizational psychologists (I/OPs) are vital players on this global field.

Suggested Discussion Questions:

Read the section on "Competencies of International Consulting (pp. 60 – 65) which describes four (4) core competencies that are integral to effective consulting. These are (i) Awareness of Self, Others, and the Larger World, (ii) Cultural Agility, (iii), Affective Capacity, and (iv) Personality Variables. Then, on pages 65 – 68, you will see case studies that illustrate how these competencies were demonstrated. Choose only one:

(1) Of the case studies that you find interesting. Which of the core competencies do you think was demonstrated by the consultant? Explain your answer.
(IMPORTANT: DO NOT choose Case Study 1. Your instructor will be the only one to provide a response to this case.)
Case Study 2: Learning by Teaching
Case Study 3: Bridging Boundaries
Case Study 4: Handling Trauma
Case Study 5: "Well, That Didn't Work"

2. Watch this video podcast titled "Practicing Consulting Psychology Internationally" in which Dr. I-Ching Grace Hung shares with Dr. Len Wysock about her experience as a consulting psychologist practicing internationally. What aspect/s of the video do you find interesting? Explain why.

"A Life of Curiosity, Learning, and Discovery."

TOPIC: INTERVENTION: Enhancing Mental Health and Well-Being Around the World

Professor's Brief Video Introduction:
https://drive.google.com/file/d/1ZVxVMu3g160-bBI6hsLa1f2UM9Y64E1A/view?usp=drive_link

Assigned Reading/s: CHAPTER 4, pp. 75 - 97 [Shealy, Bullock, & Kapadia (Eds.) (2023)]

Supplementary Materials:

ARTICLE: Ethical Principles of Psychologists and Code of Conduct
http://www.apa.org/ethics/code/index.aspx
The American Psychological Association's Ethical Principles of Psychologists and Code of Conduct provides guidance for psychologists in professional, scientific and educational roles. The Ethics Code also outlines standards of professional conduct for APA members and student affiliates.

ARTICLE: International practitioners
http://www.apa.org/gradpsych/2009/03/cover-abroad.aspx
What does it take to practice psychology abroad? Cultural competence is always in demand; educational requirements vary widely.

ARTICLE: Employing Psychotherapy Across Cultures and Contexts
https://pmc.ncbi.nlm.nih.gov/articles/PMC3868079/
Psychotherapy and psychological interventions are practiced across diverse cultural and health settings, for a variety of emotional distress and among very heterogeneous groups of people. Different schools of psychotherapy exist and are employed across regions, contexts, and cultures. However, they have been criticized for the failure to appreciate the ethnocentricity of their approaches.[1] The apparent contradictions between the theory and methods of individual schools of psychotherapy and their use in diverse social and ethnic environments are often emphasized. Nevertheless, a diligent examination of the issues suggests that many so-called "unresolvable" tensions between the standard psychotherapies and their use in diverse contexts are explained by the form-content dichotomy related to psychological therapy.[2] This editorial highlights some issues related to the use of psychotherapy across cultures.

ARTICLE: International Themes in Psychotherapy Integration
https://psycnet.apa.org/record/2019-28355-021
Integrative psychotherapies have grown significantly worldwide since the 1980s and currently hold a central place on most continents. This chapter presents a landscape of practice, training, and research in psychotherapy integration in select countries in Asia, Latin America, and Europe. Psychotherapy is defined by common features throughout the world and, at the same time, is practiced differently according to geographical regions and cultural contexts. The chapter provides brief descriptions of integrative psychotherapy movements and contributions in different world regions in order to furnish a view of integration at an international level. It provides overviews of integration in their respective countries in terms of specific models, training programs, and research programs, concluding with the current state of psychotherapy integration. Following summaries of integration in Asia-Pacific, Latin America, and Europe and select countries therein, the chapter highlights recurrent themes across countries. The landscape includes considerations about incentives and challenges to the growth of psychotherapy integration in every region as well as obstacles to address. In the future, psychotherapy around the world will undoubtedly become more fully integrative, not only in terms of blending theoretical perspectives, but also in mutually beneficial collaborative efforts between practitioners and researchers.

https://www.youtube.com/watch?v=4sCvBlb6JP0
Published on Apr 11, 2014
In this provocative interview with multicultural expert Derald Wing Sue, learn about the history of multicultural counseling, the unmet needs of diverse clients, and ways to counter the culture-bound values that may be impacting your work. This video may also be viewed at: http://www.psychotherapy.net/video/multicultural-competence-psychotherapy-sue

Suggested Discussion Questions:

1. This chapter covers several areas in which psychological intervention/s can help enhance mental health and well-being around the world. In the Applications section (pp. 84 – 93), there are eight (8) examples/exhibits of intervention settings that present opportunities for psychologists to intervene. Choose only one (1) example/exhibit from the list below (except Exhibit 4.1). In your own words, briefly summarize the problem situation AND the intervention used. What other intervention/s would you suggest?
XHIBIT 4.2: Benefiting families in Mexico City: Adaptation of a Parenting Intervention in School Setting
EXHIBIT 4.3: Empowerment in the Aftermath of an Earthquake: A Lay-Led Psychosocial Initiative in Haiti
EXHIBIT 4.4: Collaborative Healing in Post-conflict Angola
EXHIBIT 4.5: Addressing the Global Crisis of Depression: Interpersonal Therapy
EXHIBIT 4.6: ACT for All: A Conceptual Approach to Acceptance and Commitment Therapy
EXHIBIT 4.7: Investment in Early Child Development
EXHIBIT 4.8: Dealing with Disasters: International Interventions and Development of the Disaster Mental Health Institute

2. Watch this brief 2012 video which featured Dr. Janel Gauthier (Canada) who spearheaded this effort for the Universal Declaration of Ethical Principles for Psychologists.
Link to video (Runtime: 8 min, 25 sec): https://youtu.be/LqBO9pjMvsM
Professional psychology (particularly in the areas of clinical, counseling, school, and perhaps industrial/organizational psychology) is growing rapidly, though unevenly, in various regions of the world. As a result, one of the major concerns of various international psychology organizations is the development of ethical guidelines across nations. The International Union of Psychological Sciences (IUPsyS) in 1976, urged its member nations to develop codes of ethics that prohibited psychologists from abusing human rights. In 2008, it was completed and adopted.
Link to document: https://www.iupsys.net/about/declarations/universal-declaration-of-ethical-principles-for-psychologists/

Do you think this document sufficiently addresses the issue of a shared ethics and moral values across cultures/nations? Explain your answer.

"A Life of Curiosity, Learning, and Discovery."

TOPIC: LEADERSHIP: How Psychology and Psychologists Develop Global Leaders and Leadership

Professor's Brief Video Introduction:
https://drive.google.com/file/d/1dqaqYdSiTC-1R_2bDYO2dO0heBJfMjlB/view?usp=drive_link

Assigned Reading/s: CHAPTER 5, pp. 99 - 120 [Shealy, Bullock, & Kapadia (Eds.) (2023)]

Supplementary Materials:

ARTICLE: Steering Global Leadership
https://www.apa.org/monitor/2024/07/international-leadership-psychologists
Expertise in human behavior and well-being shapes governance and policy-making on a global scale

WEBPAGE: Global Psychology Alliance
https://www.apa.org/international/networks/global-psychology-alliance
The Global Psychology Alliance actively addresses global issues using psychological science to elevate the field and enhance human well-being around the world.

WEBPAGE: Psychology Societies Outside the U.S.
https://www.socialpsychology.org/inter.htm
This page contains an international listing of general psychology societies that have web sites. For information on other organizations

WEBPAGE: Global Psychology Learning Leadership Institute
https://www.apa.org/international/networks/global-psychology-alliance/learning-leadership-institute#:~:text=The%20Global%20Psychology%20Learning%20Leadership,established%20leaders%20in%20the%20field.
The Global Psychology Learning Leadership Institute (LLI) began in 2021 as a Presidential Initiative of APA 2020 President, Sandra Shullman, PhD, with the support of the Global Psychology Alliance (GPA). The LLI brings together established and emerging leaders in the field from across the world with the aim of creating a leadership pipeline and ensuring the voices of future leaders of psychology are represented in global efforts. Through cross-cultural mentorship, engagement with expert speakers and invited guests, the development of leadership projects, and contributions to the 2022 International Summit on Psychology and Global Health: Leadership for Emerging Challenges, young leaders from GPA associations continue to impact their countries, expand the global psychology community, and shape the direction of our science and profession alongside established leaders in the field.

WEBSITE: International Union of Psychological Science (IUPsyS)
https://www.iupsys.net/
The International Union of Psychological Science (IUPsyS) was established in 1889 during the First International Congress of Psychology in Paris. With 82 country members and 20 affiliated organizations the IUPsyS represents over a million psychologists worldwide. As such it acts for psychology in its full breadth as a science and as a profession.

Suggested Discussion Questions:

1. The section on "Global Leadership Development" (pp. 110 – 114) describes three applications/practices that exemplify global leadership. These are:

- Practice 1: Attend to Values and Ethics
- Practice 2: Clarify Processes and Goals
- Practice 3: Learn to Navigate Paradoxes

Which of these interested you the most? Pick only one (1). Briefly explain why AND provide your own example (hypothetical or not).

2. "Featured International Psychologist" PROJECT
(a) Indicate the NAME and COUNTRY of your "Featured International Psychologist" and provide a brief paragraph (100 - 150 words) on the biographical information about this person.
(b) Mention one (1) noteworthy accomplishment (e.g., an award, a scholarly publication) related to international psychology. Why did you choose this particular accomplishment? [IMPORTANT: Include the link/source where you found this information.]

Expertise in human behavior and well-being shapes governance and policy-making on a global scale

ARTICLE: International psychological research that matters for policy and practice
https://psycnet.apa.org/doiLanding?doi=10.1037%2F0003-066X.64.8.825
After a brief history of the Committee on International Relations of the American Psychological Association, 3 points are made about international psychological research that matters. First, it matters when the definition of the research problem area and the findings can potentially be reflected in policy change, in the practice of educators or psychologists, or in the mindsets of a new generation of researchers. Person-centered analysis of adolescents' social and political attitudes has this potential and can complement variable-centered analysis. A cluster analysis of the IEA Civic Education Study's data in 5 Western European and 5 Eastern European countries illustrates this. The following 5 clusters of adolescents were identified: those supportive of social justice but not participative, those active in conventional politics and the community, those indifferent, those disaffected, and a problematic cluster of alienated adolescents. Second, research that matters is situated in a cultural context. It is proposed that publications using data from any single country be required to include information about the cultural context in which the research was conducted. Finally, it matters that attention be given to the dynamics of the collaborative international research process, not only to research results.

BLOG: The Role of Political Psychology in Diplomacy
https://online.maryville.edu/blog/the-role-of-political-psychology-in-diplomacy/
Fundamentally, psychology is focused on better understanding the human mind and human behavior. Political psychology seeks to apply the same principle to the world of politics, examining the interplay between how people think, feel, and act — and the impact that has on how they approach political considerations. Through political psychology, individuals can gain deeper insight into different political ideologies, personalities, and policies — both for the public and political figures.

BOOK: Psychology and Foreign Policy
https://www.oxfordbibliographies.com/display/document/obo-9780199743292/obo-9780199743292-0252.xml
The use of psychological concepts to explain the behavior of individuals and groups that shape foreign policy is centuries old. Thucydides in his great *History of the Peloponnesian War* explored the impact of the fear of decline on leaders' decisions to go to war. Barbara Tuchman in *The Guns of August* demonstrated how misperception and miscalculation by leaders in the summer of 1914 led to an accidental war that no leader wanted or expected. During and after World War II, political scientists began to draw systematically on psychological concepts to explain foreign policy behavior. Scholarship advanced when the International Society of Political Psychology was founded in 1978 along with a specialized journal, *Political Psychology*. Early scholarship focused on leaders' personalities and their impact on the foreign policy choices they made, with special attention devoted to decisions to go to war or make peace. A second wave of scholarship drew on the work of cognitive psychologists who had identified heuristics and biases to explore the impact of the way leaders thought on the foreign policy decisions that they made and examined pairs of interacting leaders to explain spirals of escalation. Scholars mined cognitive psychology to explore decisions to cooperate or compete, the success and failure of deterrence and compellence, and bargaining and signaling behavior by leaders. A third wave of scholarship drew on psychological research on emotion and examined how the emotional states of leaders influenced foreign policy choices. Scholars moved beyond leaders to study elite and group attributes to explain foreign policy behavior. In doing so, they confronted the central problem of aggregation; cognition and emotion are embedded in the individual. When they move to explain group behavior, scholars deepened psychological concepts by adding a broader social dimension to the analysis. Research in the last decade situates feeling and thinking in a larger social and cultural context in a more contextualized explanation of foreign policy behavior. Research is increasingly multidisciplinary, drawing on neuroscience, evolutionary biology, evolutionary psychology, and behavioral economics to explain foreign policy behavior.

BOOK: The Psychology of Foreign Policy
https://link.springer.com/book/10.1007/978-3-030-79887-1
This book focuses on foreign policy decision-making from the viewpoint of psychology. Psychology is always present in human decision-making, constituted by its structural determinants but also playing its own agency-level constitutive and causal roles, and therefore it should be taken into account in any analysis of foreign policy decisions. The book analyses a wide variety of prominent psychological approaches, such as bounded rationality, prospect theory, belief systems, cognitive biases, emotions, personality theories and trust to the study of foreign policy, identifying their achievements and added value as well as their limitations from a comparative perspective. Understanding how leaders in world politics act requires us to consider recent advances in neuroscience, psychology and behavioral economics. As a whole, the book aims at better integrating various psychological theories into the study of international relations and foreign policy analysis, as partial explanations themselves but also as facets of more comprehensive theories. It also discusses practical lessons that the psychological approaches offer since ignoring psychology can be costly: decision-makers need to be able reflect on their own decision-making process as well as the perspectives of the others. Paying attention to the psychological factors in international relations is necessary for better understanding the microfoundations upon which such agency is based.

WEBPAGE: International Society of Political Psychology
https://ispp.org/

Suggested Discussion Questions:

1. The section on "How to Get Started" (pp. 134– 136) provides nine (9) suggestions/opportunities for psychologists to become more engaged in international policy through their education and training. Which of these interest you the most? Pick only one (1). Briefly explain why AND provide your own example (hypothetical or not).

2. As you may know, the final paper for this course involves writing a critique of a particular national/regional psychology organization that is part of the Global Psychology Alliance (GPA). This alliance is a global psychology leadership team formed to take action in addressing global issues as described in the video titled "Global Psychology Coming Together". What aspects of the video AND/OR the GPA website did you find most interesting? Explain why.

Official Journal of Division 52 (Society for Global Psychology) of the American Psychological Association

WEBSITE: Going International: A Practical Guide for Psychologists
https://www.apa.org/international/resources/info/academics-abroad
The goal of this guide is to provide an introductory guide for U.S. academics going outside the country for research and scholarship. It is written to fill the gap between general, country-level information typical of travel books or country websites, and specific details of the universities, cities or programs with which you may become involved.

WEBSITE: Challenges and Opportunities for Psychological Research in the Majority World
https://online.ucpress.edu/collabra/article/10/1/123703/203452/Challenges-and-Opportunities-for-Psychological
How can psychology transform itself into an inclusive science that engages with the rich cultural diversity of humanity? How can we strive towards a broader and deeper understanding of human behavior that is both generalizable across populations and attentive to its diversity? To address these major questions of our field, relying on scholars from different world regions, we outline first the opportunities associated with conducting psychological research in these and other majority world regions, highlighting international collaborations.

Suggested Discussion Questions:

Presume that you are the principal investigator/research in charge of conducting a cross-national psychology research project (e.g., college students' perceptions about school-related stress).

1. Pick two (2) countries to study/compare for this research project. Explain why you picked these countries.

2. Pages 155 – 160 presents several questions and offer suggestions to help initiate your research project. Pick only one (1) of these questions that you think is most interesting or important given your research project. Briefly explain your answer.

ARTICLE: How Do We Create Transformative Global Citizens (Bosio, 2018)
https://www.academia.edu/35340771/How_do_we_create_transformative_global_citizens_Bosio_2018_?email_work_card=view-paper
Why are we in teaching and learning if not to be able to help enrich the lives of our students? This article builds on a 'transformative value-creating' dimension of global citizenship education. The word transformative refers to a clear focus on self-reflection and awareness, while the words value-creating denote taking actions in order to create value in society. Findings suggest there are three emerging interconnected dimensions of implementing the notion of global citizenship into universities' curricula, namely: social contribution, civic commitment, and global disposition. These dimensions can be summarized in the following equation: Social contribution + civic commitment + global disposition (the development of knowledge, skills and values) = students' 'personal transformation' and evolution towards value-creation within society.

TOPIC: CONCLUDING THOUGHTS: on Going Global: How Psychologists Should Meet a World of Need

Professor's Brief Video Introduction:
https://drive.google.com/file/d/1vYNISLFb62ImfPxacZq9XaS4EI2eNuCw/view?usp=drive_link

Assigned Reading/s: CHAPTER 10, pp. 207 - 227 [Shealy, Bullock, & Kapadia (Eds.) (2023)]

Supplementary Materials:

ARTICLE: A Global Perspective
https://www.apa.org/gradpsych/2006/01/perspective
Experts and students offer tips on adding an international focus to your psychology work.

VIDEO: Global Psychology Coming Together
https://www.youtube.com/watch?v=G9dvJDkXY10
APA is committed to working with our global partners to promote the use of psychological science to improve lives worldwide.

WEBPAGE: Society for Global Psychology (APA Division 52_
https://div52.net/
Division 52: The Society for Global Psychology seeks to develop a psychological science and practice that is contextually informed, culturally inclusive, serves the public interest and promotes global perspectives within and outside of APA. The Division of International Psychology represents the interest of all psychologists who foster international connections among psychologists, engage in multicultural research or practice, apply psychological principles to the development of public policy or are otherwise concerned with individual and group consequences of global events.

EPILOGUE: A Final Note about "International Psychology" - WHAT's NEXT?...
"*The answers and other developments in theory, research, intervention, and pedagogy, will certainly advance the field of global psychology greatly over the next few years. While it is an exciting period for psychologists and psychology students who are interested in global psychology, it is also a challenging one. There are myriad forces and events that could influence the direction of the specialty, some of which can be dimly envisaged (e.g., the expected course of globalization) and others which cannot be anticipated. The future course of global psychology also rests on the awareness and commitment of psychologists to communicate and collaborate in a horizontal and multidisciplinary fashion on various levels in an effort to understand and address the shared concerns and issues that face humankind. Perhaps, the most telling question that remains to be answered concerns the foundation and identity of the discipline of psychology as we know it. As the process of globalizing psychology ensues, how will its science and practice be transformed from the form in which it is currently constituted? Psychology will continue to evolve as it has in the past. Although this inevitable evolution can be forecast with limited accuracy, it would seem that the beliefs and customs of other cultures will be incorporated more extensively into the fabric of scientific and professional psychology in the future. Conversely, as psychology becomes more globally integrated, the history of psychology will be reconceptualized as transnational and multilingual, rather than as Western and English-dominated. New books that deconstruct the history of psychology (e.g., Brock, in press) will play a significant role in how psychologists and psychology students construe the discipline of psychology and their own identity within it.*" (Stevens & Gielen, 2007, pp. 397-399)

Annual Psychology Day at the United Nations

Psychology Day at the United Nations is a celebration of psychology in the context of the UN. It provides an opportunity for psychology to share with U.N. Permanent Missions, U.N. Agencies, NGOs and the private sector the activities of psychologists at the U.N. and the role of psychology in addressing concerns of global importance.

Suggested Discussion Questions:

1. This final chapter provides a fitting summation and conclusion for our textbook. On pages 209 – 214, the book's editors presented four (4) fundamental questions to consider if we (as proponents of internationalizing psychology) want to "go global" and "meet a world of need".
Question 1: Can We Believe in Something Bigger Than Ourselves?
Question 2: What is our Capacity for Complexity?
Question 3: Can We Cultivate Mind and Heart?
Question 4: What Will We Do With Our Lives?
Choose only one (1) that you find interesting? Briefly explain why you chose it.

2. Do you remember the video you watched from our WEEK 1 discussion forum? - "How Can Students Get Involved in International Psychology?" (https://www.youtube.com/watch?v=oENWlDiFIjc). With the exception of taking this course, specify ONE (1) other relevant way that you can do (or wish you can) to obtain a more international perspective about psychology as it relates to YOUR career/professional objective? Explain why.
(NOTE: Please specify your career/professional objective. If you are unsure of what this may be, base your explanation on how it may benefit your personal life.)

Psychology Atlas

Psychology has been my lifelong profession and one of my greatest passions. These maps highlight the people, organizations, universities, and international collaborations that have contributed to the growth of psychology around the world. Together they illustrate how ideas cross borders and how the science of behavior truly belongs to a global community.

MAP 1 - Foundations of Psychology

Contents (9 layers):

1. World History of Psychology
2. Great Psychologists
3. Psychology Heritage Sites
4. Psychology Museums
5. Nobel Laureates & Psychology
6. Positive Psychology
7. Psychology & the United Nations
8. Psychology & Climate Change
9. Cross-Cultural Psychology

MAP 2 - International Psychology and the World

Contents (7 layers):

10. Indigenous Psychology
11. Psychology Around the World
12. Psychology Organizations
13. Psychology Conferences
14. Psychological Tests Around the World
15. Psychology and Human Rights
16. Psychology in Literature and Film

MAP 3 - Global Psychology Alliance

Explore the organizations and partnerships that unite psychologists in advancing the science and practice of psychology worldwide.

PSYCHOLOGY 603
Introduction to International Psychology

Instructor:
Email:
Office Hours:
Credits:
Course Format:

Course Description
This graduate-level online course entails reading, discussing, and writing about a variety of contemporary topics in the relatively new specialty of international psychology. You will examine mainstream as well as alternative theoretical, methodological, and applied approaches that are relevant to the study and practice of international psychology. The topics selected offer a broad and deep understanding of this field, specifically, an appreciation of psychology's relevance to the understanding and solution of global problems, as well as of how psychology itself is affected by worldwide events and forces. There will be a Final Paper in the form of an in-depth critique on a topic relevant to the internationalization of psychology.

Prerequisite
There are no graduate course prerequisites. This course is required for students in the "Global Psychology Research track within the MA in Psychology Program (Pace Psychology Dept., NYC campus).

Learning Outcomes
Students in this course will develop and demonstrate competencies in the following areas:
- Knowledge of current foci and future directions of this rapidly growing specialty in the discipline.
- Ability to evaluate critically the appropriateness and consequences of mainstream psychological theory, research, and practices within a global context;
- Familiarity with alternative models, methods, and interventions that have their roots in cultural, economic, historical, political, religious, and social contexts and their relevance to understanding and addressing global phenomena;
- Sensitivity to how global events and forces impact the psychosocial and sociocultural realities of diverse populations; *and*
- Understanding the education and training requirements for a career in international psychology.

Class Delivery Format/Location (General description only)
Online: Course is delivered fully remotely with no on-campus components.
- Asynchronous (ASYNC): CLASSES will be utilized for this course. There will be assignments, quizzes/tests, projects and/or discussions that students have the flexibility to complete within a set period **each week**.

How Do I login to CLASSES (also called "Brightspace")?
This online course is taught using CLASSES which may be accessed at CLASSES.pace.edu. Enter your username and password and click the login button; use your MyPace Portal username and password to login (e.g., cw94975n, tr87689w and jc73732p).

Course Materials (Required text and other materials)

- Shealy, C. N., Bullock, M., & Kapadia, S. (Eds.). (2023). *Going Global: How Psychologists Can Meet a World of Need.* American Psychological Association [(ISBN: 978-1433836435)
  (NOTE: Below are links to two formats of this book. The Kindle format is recommended.)

- Additional relevant readings may be assigned.

Course Requirements

In CLASSES, the course materials are organized within the **TABLE OF CONTENTS.**

1. DISCUSSIONS (Weekly)

Each week begins on (day of the week) and ends on the following (day of the week).
The main purpose of the online discussions is to enhance your learning of the concepts and applications presented in this course, and to further your thinking and writing skills. Discussions are meant to be insightful, reflective, lively, and thought provoking.

Every Monday, your instructor will post a few questions pertaining to the assigned chapter and/or course requirement. You are expected to actively read and comprehend the materials assigned for that week.

INITIAL Response/s: You are expected to regularly and to actively participate in all the weekly discussions by responding (completely and thoroughly) to each question posted.

FEEDBACK Responses: You are also required to provide "quality" feedback to **at least 2** of your other classmates' and/or instructor's initial postings in a way that makes the discussions intellectually stimulating. You are encouraged to respond to more postings if you want a better participation grade for that week.

Grading of Weekly Discussions:
Grading rubric. This form will be used by your instructor.
[NOTE 1: It will be up to your instructor to determine the quality and frequency of your initial responses to the questions and your feedback to your classmates' (including instructor's) postings. This rubric will serve as a basis for the grading of your discussion forum participation.]
[NOTE 2: Responses deemed to be inappropriate may be deleted by your instructor.]

2. ASSIGNMENTS

The two assignments for the course are (1) "Featured International Psychologist" Project, and (2) Final Paper.

- **"Featured International Psychologist" Project –** PowerPoint (10 - 12 slides)

  Your instructor will provide a list of names of relevant international psychologists from which each student in class may choose from. You are required to create a **report in the form of a PowerPoint presentation** (or a comparable/compatible presentation software) that highlights the relevant background and contributions of an esteemed individual on the field of international psychology. In addition to the background information that you find about this person, you are also expected to include relevant images, videos, and audio narration of your voice in your presentation. The more multimedia your presentation, the better. You may use the "add notes" feature of PPT and/or insert your recorded voice/narration if you wish. (*Let me know if you have any questions regarding this.)*

  Your PowerPoint presentation/slides should contain the following information.

1. Background information of Featured Psychologist (with face photo if available)
2. Contributions to International Psychology
3. List of scholarly publications
4. Additional Information of Interest
5. COMMENTARY

In addition, your project will also be evaluated on the following: (i) Quality of slides, and (ii) Notes and/or Audio content.

Grading of "Featured International Psychologist" Project:
Grading rubric. This form will be used by your instructor.
[NOTE: Details about the grading of your final paper will be presented during the semester.]

- **Final Paper** (4 - 5 pages, single-spaced)

Your instructor will provide you with a list of more than 70+ national, regional and international psychological associations that are part of the ***Global Psychology Alliance*** (https://www.apa.org/international/networks/global-psychology-alliance). Each student will be required to write an in-depth critique (reaction paper) on a particular national psychology organization from this list.
[NOTE: The CRITIQUE section of your final paper may include your own comments about the organization, which includes your thoughts and recommendations about its activities and contributions to the internationalization of psychology. Incorporate what you have learned from the textbook and discussion forums. The number of relevant ideas you include will significantly contribute to the grading of your paper.]

Turnitin will be used to submit papers.

The structure and contents of the paper MUST be organized using the following headings.
1. Description of the organization *(approx. 1 page)*
2. Leaders of the organization *(approx. 1 page)*
3. Membership *(approx. 1 page)*
4. Recent news, events, and activities *(approx. 1 page)*
5. CRITIQUE (Commentary about the organization) *(approx.1- 2 pages)*

In addition, your project will also be evaluated on the following: (i) Writing quality, and (ii) Organization of paper.

Grading of Final Paper:
Grading rubric. This form will be used by your instructor.
Student Grade Form: This form will be used by you and your classmates to help grade your paper.
[NOTE: Details about the grading of your final paper will be presented during the semester.]

Grading System

DISCUSSIONS (Weekly)*		
(20 points per week/forum; 14 weeks/forums)	56%	280 points
ASSIGNMENTS**		
"Featured International Psychologist" Project	14%	70
Final Paper		
Instructor Evaluation	20%	100
Student Grade Form (grades are averaged)	8%	40
Submission of Student Grade Form	2%	10
Total Points:		**500**

** 1 point deducted for each day late. (Per initial response and per feedback response.)*
*** 3 points deducted for each day late.*

Letter-Grade Equivalent
("Strictly" followed)

A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

SCHEDULE

WEEK	TOPIC/s	READING/s*
1	What is International Psychology? Video on "International Psychology: What Student Want to Know"	Syllabus; Additional readings
2	IINTRODUCTION to *Global Psychology:* Why Psychologists Should Meet a World of Need	Textbook (pp. 3 - 13)

11	SERVICE: Toward a Global Psychology of Collaboration, Counterflow, and Capacity Building	Ch. 8 (pp. 167 - 182)
12	TEACHING: Opportunities and Recommendations for Internationalizing Psychology Education	Ch. 9 (pp. 183 - 206)
13	CONCLUDING THOUGHTS on *Going Global:* How Psychologists Should Meet a World of Need	Ch. 10 (pp. 207 - 227)
14	**DUE: FINAL PAPER** **DUE: STUDENT GRADE FORM** (for Final Paper)	Final Papers
15	FINAL COURSE GRADES	

**Supplementary readings may be assigned.*

University Policies and Resources

- ***Academic Integrity***

Students in this course are required to adhere to Pace University's Academic Integrity Code, which supports honesty and ethical conduct in the educational process. It educates students about what constitutes academic misconduct, helps to deter cheating and plagiarism, and provides a procedure for handling cases of academic misconduct. Students are expected to be familiar with the Code, which can be found in University Policies, Disciplinary and Grievance Procedures. Individual schools and programs may have additional standards of academic integrity. Students are responsible for familiarizing themselves with the policies of the schools, programs, and courses in which they are enrolled.

[Pace Graduate Students]
Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any academic paper, report, or submission for academic credit without the appropriate acknowledgement is plagiarism. It is also academically dishonest to submit anything in electronic form as one's own that is the work, either fully or in part, of someone else. It is unethical to present as one's own work, the ideas, words, or representations of another without the proper indication of the source. Therefore, it is the student's responsibility to give credit to any quotation, idea or data borrowed from an outside source. Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension, dismissal, or expulsion from the University. (L-54)

- ***Learning Commons***

The Learning Commons uses an array of programs and a holistic approach to assist students with academic skills and content knowledge. We are dedicated to developing independent learners through purposeful interactions with trained, well-qualified peer and professional staff. Services offered:

- Content Support Services including, content tutoring, exam review sessions, & content preparation/support workshops
- Academic Skills Services including small group peer mentoring, academic skills workshops, and individual academic development
- Writing Support Services including, writing tutoring & writing preparation/support workshops

- ***Procedure for Students Who Wish to Obtain Reasonable Accommodations for a Course***

The same rigorous standards for admission apply to students with and without a disability. In order to support the continued success of students with disabilities, the University prohibits discrimination on the basis of disability and is committed to ensuring equal access for students with disabilities to its facilities, programs, and activities. The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities.

To request an accommodation for a qualifying disability, a student must self-identify and register with the Disability Services Office for his or her campus. The Office of Disability Services is housed in the Counseling Center on the New York City and Pleasantville campuses. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see Information for Students with Disabilities page.

- ***Technological Resources***
  - List of all Pace Information Technology Services.
  - For assistance with a technological concern contact the Pace Helpdesk at (914) 773-3648 or create a help desk ticket.
  - Visit the Learning Remotely website

- ***Appropriate Use Policy for Information Technology***

Pace endorses the following statement on software and intellectual rights distributed by EDUCAUSE, the non-profit consortium of colleges and universities, committed to the use and management of information technology in higher education. The statement reads:

> *Respect for intellectual labor and creativity is vital to academic discourse and enterprise. This principle applies to work of all authors and publishers in all media. It encompasses respect for the right to acknowledgment, right to privacy and right to determine the form, manner and terms of publication and distribution.*
>
> *Because electronic information is volatile and easily reproduced, respect for the work and personal expression of others is especially critical in computer environments. Violations of authorial integrity, including plagiarism, invasion of privacy, unauthorized access and trade secret and copyright violations, may be grounds for sanctions against members of the academic community.*

See Pace's IT appropriate use policy.

- ***Sex-Based Misconduct Policy and Procedure***

Pace University is committed to providing a safe environment for every member of its community and to ensuring that no student, faculty, or staff member is excluded from participation in or denied the benefits of any University program or activity on the basis of sex. Accordingly, the University prohibits the following forms of Sex-Based Misconduct: sexual assault, sexual harassment, gender-based harassment, dating violence, domestic violence, sexual exploitation, and stalking.

Instructors are a **non-confidential** resource and have an obligation to report any information about sexual assault with the Executive Director of Institutional Equity and Title IX Coordinator – Bernard Dufresne, bdufresne@pace.edu, 163 Williams Street, Room 1017, (212) 346-1310. The Title IX/Affirmative Action Office is responsible for investigating violations of the sexual misconduct policy. Go here for more information about the Pace University sexual misconduct policy.

Members of the University community who believe that they have been subjected to Sex-Based Misconduct are encouraged to report such incidents to the University and, where applicable, to local law enforcement. **Confidential** resources include the **University Counseling Centers, Offices of Sexual and Interpersonal Wellness** and **University Healthcare**. Contact information for those offices may be found in the self-care section below.

- ***Self-Care***

Your academic success in this course and throughout your college career depends heavily on your personal health and well-being. Stress is a common part of the college experience, and it often can be compounded by unexpected life changes outside the classroom. The Pace Community strongly encourages you to take care of yourself throughout the term before the demands of midterms and finals reach their peak. Please feel free to talk with me about any difficulty you may be having that may impact your performance in this course as soon as it occurs and before it becomes unmanageable. Please know there are a number of other support services on campus that stand ready to assist you. You are strongly encouraged to contact them when needed as well.

The Counseling Center "Just In Case" information supplies potentially life-saving mental health information to Pace University students, staff, and faculty, putting vital information and support options at your fingertips, just in case you or a friend needs help. Go to the Just in Case page on the Pace website or go to "Counseling Center" on the MyPace or the Pace Safe app.

Florida Homes

My Florida homes reflect the peaceful lifestyle I enjoy in retirement. From lakeside living to Gulf Coast sunsets, these places have become personal retreats for relaxation, reflection, and everyday happiness.

My Zen Island Beach Havens

Florida has become an important part of my life's journey. I fondly refer to my two homes as my **Zen Island Beach Havens—or simply my Zenis.** Each offers its own character and rhythm of life, while sharing the sense of comfort, tranquility, and connection to nature that I value.

MAP - Florida Homes

Zeni 1 - Central Florida Home

Zeni 1, located in the Metro Orlando area, is my primary Florida home—a warm, tropical-inspired retreat for everyday living, family gatherings, and enjoying the many attractions of Central Florida.

The Zeni 1 aesthetic blends warm contemporary design with subtle tropical and coastal influences. Neutral tones, natural textures, dark wood, greenery, and touches of aqua and coral create a relaxed, resort-inspired atmosphere. The design emphasizes comfort, visual balance, and an easy connection between indoor and outdoor living—reflecting both Florida life and a lifelong appreciation for travel, welcoming spaces, and the places that feel like home.

Clubhouse & Main Pool

Lake Davenport & Private Pier

Recreation

Spa & Wellness

Tropical Grounds & Nature Trail

Zeni 2 - Gulf Coast Retreat

Zeni 2, located in St. Petersburg, is my Gulf Coast retreat—a relaxed, light-filled home for enjoying beaches, breathtaking sunsets, waterfront parks, and the easygoing character of coastal Florida.

The Zeni 2 aesthetic reflects a relaxed coastal-contemporary style inspired by Florida's Gulf Coast. Soft neutrals, warm wood tones, shades of blue and aqua, natural textures, and simple furnishings create an airy, casual atmosphere. The design emphasizes comfort, light, and an easygoing connection to the outdoors—evoking the feeling of a coastal retreat shaped by sunshine, water, and the slower rhythm of St. Petersburg living.

Clubhouse & Pool

Grounds

Two Homes, Two Rythms.

Together, my Zenis represent two sides of the Florida life I have come to enjoy—one centered on the familiarity and energy of Central Florida, the other on the relaxed coastal character of St. Petersburg. Both are places where I can slow down, appreciate my surroundings, and simply enjoy being home.

Florida Favorites

These are some of my favorite places in Florida—destinations that I enjoy returning to for their beauty, history, culture, and the simple pleasures they bring to everyday life.

MAP - Florida Favorites

Places I Return To

Some places become favorites not because they are famous, but because something about them keeps drawing us back. These are a few of the places that have become part of my experience of living, exploring, and enjoying Florida.

St. Petersburg

Favorite Florida City

St. Petersburg is one of my favorite Florida cities, combining a beautiful waterfront, a walkable downtown, interesting neighborhoods, museums, restaurants, and the relaxed atmosphere of Florida's Gulf Coast.

What I especially enjoy is the variety. A visit can include walking along the waterfront, exploring downtown, enjoying a meal, visiting one of the city's museums, or simply spending time outdoors. It is a place that feels both lively and relaxed, and one I continue to enjoy returning to.

Featured Video

Celebration

Favorite Florida Town

Celebration has always interested me because it feels quite different from most communities in Central Florida. Originally developed by The Walt Disney Company, it combines traditional architecture, tree-lined streets, lakes, walking paths, shops, and restaurants within a carefully planned town.

I especially enjoy its walkability and welcoming atmosphere. It is the kind of place where simply strolling around the lake, exploring the town center, having a meal, or sitting outdoors can be the experience itself. Its distinctive character makes Celebration one of the Florida communities I enjoy visiting again and again.

Featured Video

Clearwater Beach

Favorite Florida Beach

Clearwater Beach represents much of what I enjoy about Florida's Gulf Coast—white sand, warm water, beautiful sunsets, and an easygoing seaside atmosphere. It offers the pleasures of a beach destination while still having plenty of restaurants, activities, and places to explore nearby.

For me, however, its greatest appeal is much simpler: being near the water. There is something restorative about looking across the Gulf, walking along the beach, and watching the sun set over the horizon. Sometimes the simplest experiences become the most memorable.

Featured Video

Wat Florida Dhammaram

Favorite Spiritual Place

Wat Florida Dhammaram is one of the more unexpected and peaceful places I have discovered in Central Florida. The Buddhist temple and monastery provide a quiet setting surrounded by statues, gardens, and representations of Buddhist traditions.

What I appreciate most is the contrast between this peaceful setting and the busy attractions for which Central Florida is better known. It offers an opportunity to slow down, observe, reflect, and experience a different cultural and spiritual tradition. Places like this remind me that meaningful discoveries can sometimes be found surprisingly close to home.

Featured Video

Nipa Hut

Favorite Filipino Restaurant

Nipa Hut is one of my favorite places to enjoy Filipino food in Central Florida. Its casual atmosphere and familiar dishes offer something beyond simply going out for a meal—they provide a connection to the tastes, traditions, and culture of the Philippines.

Having grown up in the Philippines, Filipino food carries memories and associations that make the experience especially meaningful to me. Places such as Nipa Hut are reminders that even after making a home somewhere new, familiar flavors can provide a small but comforting connection to where one's journey began.

Featured Video

More Florida Favorites to Come

Florida continues to surprise me, and this collection will undoubtedly grow as I discover new places—and return to old favorites—along the way.

Cruises

Cruising has taken me to remarkable destinations and created some of my most memorable travel experiences. Each voyage has offered new adventures and opportunities to discover the world from a different perspective. From short escapes close to home to journeys across Europe, the Caribbean, Hawaii, and Asia, this page traces those travels through the ships, destinations, and experiences that have become part of my journey.

Cruises Through the Years

The voyages that have taken me to destinations near and far.

(on Norwegian Sky)
(Norwegian Cruise Line)
July 31 - August 7, 2004

Itinerary: Honolulu, Oahu | Nawiliwili, Kauai | Hilo, Hawaii | Kona, Hawaii | **Kahului, Maui** | Honolulu, Oahu

The Journey Continues

What began as another way to travel has become one of my favorite ways to experience the world. Each voyage has brought something different—new destinations, familiar places seen from another perspective, and memories created along the way. As long as there are new places to discover, I hope there will always be another journey ahead.

Travel

Travel has enriched my life by introducing me to new places, cultures, and perspectives. Every journey has deepened my appreciation for the diversity, beauty, and shared humanity of our world.

Travel has been one of the great teachers in my life, offering opportunities to experience new places, encounter different cultures, and see the world from new perspectives. From exploring the communities of Florida to traveling across the United States and abroad, each journey has added something to my understanding of the places we call home and the wider world we share.

The sections below trace those journeys—from places close to home to destinations around the world—and the maps offer another way to explore where I've been and where I hope to go next.

Florida Travels

31 Cities & Communities

Florida has been home for many years, but it has also been a place of continuing discovery. From the communities where I've lived to favorite destinations and places discovered along the way, these travels reflect my experience of exploring the state I now call home.

Zen Living & Wellness

Living well is about finding balance, purpose, and peace in everyday life. This page reflects some of the practices, ideas, and resources that inspire me to nurture physical health, emotional well-being, and a more mindful way of living.

My Approach to Living Well

For me, living well means finding a comfortable balance among physical health, emotional well-being, meaningful relationships, personal growth, and simply enjoying life. I value moments of quiet and reflection, but also travel, learning, new experiences, and time spent with people who matter to me. I try to appreciate the present while remaining curious about what life still has to offer.

"What if our religion was each other? If our practice was our life? What if the temple was the Earth? If forests were our church? If holy water - the rivers, lakes, and oceans? What if meditation was our relationships? If the Teacher was life? If wisdom was knowledge? If love was the center of our being."
— Ganga White

Finding Calm & Balance

Quiet moments can provide an opportunity to slow down, clear the mind, and reconnect with the present. Music, nature, and peaceful surroundings are some of the simple ways I enjoy creating a sense of calm and balance in everyday life.

Stingray Naturescape

A relaxing combination of beautiful natural scenery and soothing music that can provide a peaceful background for reflection, relaxation, or simply unwinding.

Ideas That Inspire Me

Over the years, I have found value in ideas that encourage reflection, personal growth, emotional well-being, and a greater appreciation of everyday life. The following are a few resources and perspectives that I have found interesting or meaningful.

17 Zen Tips for Practicing Gratitude All Day Long (Sifu Anthony Korahais)
https://flowingzen.com/18103/17-zen-tips-for-practicing-gratitude-all-day-long/

The Beginner's Guide to Zen Living: 10 Steps to Transforming Your Life with the Spirit of Zen (Matt Valentine)
https://buddhaimonia.com/blog/zen-living

How to Create a Mini-Retreat at Home (The Buddhist Review: Tricycle)
https://tricycle.org/trikedaily/home-meditation-retreat/

Free template: The half-day (and full-day) at-home meditation retreat (A Life of Productivity)
https://alifeofproductivity.com/free-template-at-home-meditation-retreat/

The Fear of Being Alone (Leo Babauta)
https://zenhabits.net/joy-of-one/

Videos & Channels I Enjoy

The following are a few channels I enjoy for their perspectives on mindfulness, philosophy, emotional well-being, and living a more thoughtful life.

Share Ideas
Thought-provoking short films exploring spiritual, psychological, intellectual, and philosophical ideas.

The School of Life
Explores psychology, philosophy, relationships, and emotional well-being with an emphasis on understanding ourselves and living more thoughtfully.

Philosophies for Life
Presents wisdom from ancient philosophers and applies their ideas to the challenges and opportunities of modern life.

Plum Village
Offers teachings and practices inspired by Zen Master Thich Nhat Hanh, with an emphasis on mindfulness, compassion, peaceful living, and connection with others and the natural world.

For me, living well is less about seeking perfection than about appreciating the present, remaining open to growth, and finding meaning and joy along the way.

Finance

Financial well-being provides the freedom and security to pursue the experiences that matter most. This page reflects some of the principles, ideas, and resources that have helped me plan for a secure, independent, and fulfilling retirement.

My Approach to Financial Well-Being

For me, financial well-being is not simply about accumulating wealth. It is about creating security, maintaining independence, and having the freedom to enjoy life. Thoughtful saving, investing, and retirement planning have allowed me to focus more on the experiences I value—travel, learning, relationships, and making the most of retirement—while also preparing responsibly for the future.

Financial Resources I Have Found Useful

Over the years, I have used a variety of resources to learn more about retirement planning, investing, and financial independence. The following are a few that I have found particularly useful.

Financial Samurai

A personal-finance resource offering perspectives on investing, retirement planning, financial independence, real estate, and other financial topics.

Boldin

A comprehensive retirement-planning resource that offers tools for exploring retirement income, spending, investments, taxes, and long-term financial scenarios.

Empower

A financial planning and investment-management resource with tools for tracking investments, retirement accounts, spending, and overall financial progress.

Financial security has never been an end in itself for me. Its greatest value is the freedom it provides—to make choices, enjoy meaningful experiences, help others when possible, and approach the future with greater confidence and peace of mind.

Giving

Giving back is one of life's most meaningful rewards, reflecting the values of compassion, gratitude, and a desire to make a positive difference in the lives of others.

Why Giving Matters to Me

I believe that even modest acts of generosity can make a meaningful difference. The causes I have chosen to support reflect concerns that are personally important to me—including helping children overcome poverty, protecting animals from cruelty, supporting people in vulnerable circumstances, and promoting dignity, acceptance, and opportunity for LGBTQ individuals. Giving is one way I can express gratitude for what life has given me while helping others along the way.

Causes and Organizations I Support

children international™

Children International

An organization dedicated to helping children and families overcome poverty through access to education, health care, nutrition, and opportunities for a better future.

HUMANE SOCIETY INTERNATIONAL

Humane World for Animals

formerly Humane Society International

An international animal-welfare organization working to protect animals from cruelty, improve their well-being, respond to disasters, and strengthen the bond between people and animals.

Nazareth House - Catholic Worker (Bahay Nazareth)

A house of hospitality in the Philippines serving people in vulnerable circumstances, including individuals living with HIV or AIDS who may lack adequate housing or family support. Its commitment to compassion, dignity, inclusion, and care for those in need makes its mission especially meaningful.

Email: bahaynazareth@gmail.com
Nazareth House Facebook Page: https://www.facebook.com/groups/1083887471739199/

THE TREVOR PROJECT
saving young lives

The Trevor Project

An organization dedicated to supporting LGBTQ young people through crisis services, advocacy, education, and efforts to create a safer and more accepting world.

Giving reminds me that a meaningful life is measured not only by what we experience and accomplish for ourselves, but also by the kindness, compassion, and opportunities we are able to extend to others.

DESIGN HOME Gallery

Beautiful spaces have the power to inspire, comfort, and spark creativity.

Design Home has become one of my favorite creative hobbies, allowing me to explore interior design in a fun, relaxing, and imaginative way. Although I have no formal training in interior design, I enjoy experimenting with color, texture, balance, lighting, and furnishings to create spaces that are both comfortable and visually appealing. The homes featured in this gallery represent some of my favorite designs created using the Design Home app and reflect a variety of architectural styles and locations from around the world. Earning a 5-star rating is always rewarding, but even more enjoyable is the creative process itself and the opportunity to express my own sense of style through each room I design. Every room begins with imagination, where creativity transforms an empty space into a place that feels like home.

Digital Artwork

Creativity continues to evolve, and technology has opened exciting new ways to imagine, create, and share ideas.

My Digital Canvas Photos are created by transforming original photographs into digital artwork, many of which are stylized to resemble oil paintings on canvas. I enjoy creating images that are colorful, bold, and vibrant, often featuring soft, flowing brushstrokes that give each piece a painterly feel. Most of my artwork is presented in a 16:9 widescreen format, making it well suited for display on computer monitors and televisions. My favorite subjects include abstract compositions, close-ups, interiors, landscapes and cityscapes, self-portraits, and still life. From time to time, I also create pieces that do not fit neatly into a single category but simply capture a scene, pattern, or moment that inspires me.
Creating these digital artworks allows me to combine my interests in photography, creativity, and technology while exploring new ways of seeing familiar subjects.

Self-Portraits

Every portrait tells a story—not only of how we look, but of who we are becoming.

This gallery features AI-generated self-portraits inspired by some of my recent photographs. Rather than serving as traditional portraits, these images represent a creative and playful exploration of how artificial intelligence can reimagine familiar photographs through a variety of artistic styles and interpretations. As someone who has always enjoyed learning about emerging technologies, I created this collection to better understand the creative possibilities of AI and its potential for personal expression. Over time, I hope to expand this gallery with AI-generated portraits inspired by photographs from different stages of my life, creating a visual journey that combines memory, creativity, and technology.

Note: *The images in this gallery are AI-generated artistic interpretations inspired by my photographs and are intended as a creative exploration rather than actual photographic portraits.*

World Map

Traveling internationally has broadened my appreciation for history, culture, and the remarkable diversity of our world. This interactive map includes countries and cities I have visited, along with destinations that remain on my travel wish list. Every journey offers an opportunity to learn something new—not only about the places we visit, but also about ourselves.

Abstract

Finding inspiration... in the flow, the texture, the subjective. Appreciate that we often experience reality from our own interpretation of the world. These are photos of objects taken using a digital microscope, then magnified to up to 1000x, then digitally manipulated with a burst of saturated colors and wavy textures.

MAP - Places Visited

Every journey leaves a lasting impression.
One of the greatest joys of travel is discovering that every destination has its own story to tell. Whether exploring a vibrant city, standing before a historic landmark, or simply enjoying the beauty of everyday life in another culture, each place has broadened my perspective and deepened my appreciation for our remarkable world. This map highlights many of the countries and cities I have been fortunate to visit over the years. I hope it inspires you to explore, reflect, and perhaps begin planning your own next adventure.
Travel has taught me that while every destination is unique, people everywhere share far more in common than they often realize. Those discoveries have become some of life's greatest rewards.

Explore This Map

This interactive map highlights the countries, cities, and destinations I have visited throughout my travels around the world. Each location represents a memorable experience and an opportunity to appreciate the history, culture, natural beauty, and diversity that make every destination unique.

Reflections & Legacy

Looking Back with Gratitude, Looking Forward with Meaning

As the years pass, I find myself thinking less about what I have accomplished and more about what life has taught me. This page is a place for those reflections—on gratitude, identity, relationships, vulnerability, resilience, circumstance, and even the role of luck in shaping a life. It is also a place to remember the people who made a difference in mine and to consider what I hope may remain after I am gone. These are not intended as final answers, but as personal reflections on what I have experienced, what I have come to value, and what I believe has made my life meaningful.

PSYCHOLOGY 603

Introduction to International Psychology

(CRN #21243)
(Spring 2025)

Instructor: Richard Velayo, Ph.D.
Email: rvelayo@gmail.com or rvelayo@pace.edu
Office Hours: by appointment (phone)
Credits: 3
Course Format: Online (Asynchronous)

Course Description

This graduate-level online course entails reading, discussing, and writing about a variety of contemporary topics in the relatively new specialty of international psychology. You will examine mainstream as well as alternative theoretical, methodological, and applied approaches that are relevant to the study and practice of international psychology. The topics selected offer a broad and deep understanding of this field, specifically, an appreciation of psychology's relevance to the understanding and solution of global problems, as well as of how psychology itself is affected by worldwide events and forces. There will be a Final Paper in the form of an in-depth critique on a topic relevant to the internationalization of psychology.

Prerequisite

There are no graduate course prerequisites. This course is required for students in the "Global Psychology Research track within the MA in Psychology Program (Pace Psychology Dept., NYC campus).

Learning Outcomes

Students in this course will develop and demonstrate competencies in the following areas:

- Knowledge of current foci and future directions of this rapidly growing specialty in the discipline.
- Ability to evaluate critically the appropriateness and consequences of mainstream psychological theory, research, and practices within a global context;
- Familiarity with alternative models, methods, and interventions that have their roots in cultural, economic, historical, political, religious, and social contexts and their relevance to understanding and addressing global phenomena;
- Sensitivity to how global events and forces impact the psychosocial and sociocultural realities of diverse populations; *and*
- Understanding the education and training requirements for a career in international psychology.

Class Delivery Format/Location (General description only)

Online: Course is delivered fully remotely with no on-campus components.

- Asynchronous (ASYNC): CLASSES will be utilized for this course. There will be assignments, quizzes/tests, projects and/or discussions that students have the flexibility to complete within a set period **each week**.

How Do I login to CLASSES (also called "Brightspace")?

This online course is taught using CLASSES which may be accessed at CLASSES.pace.edu. Enter your username and password and click the login button; use your MyPace Portal username and password to login (e.g., cw94975n, tr87689w and jc73732p).

Course Materials (Required text and other materials)

- Shealy, C. N., Bullock, M., & Kapadia, S. (Eds.). (2023). *Going Global: How Psychologists Can Meet a World of Need.* American Psychological Association [(ISBN: 978-1433836435)
  (NOTE: Below are links to two formats of this book. The Kindle format is recommended.)
  Kindle format:
  Link to purchase Kindle format:
  https://www.amazon.com/Going-Global-Psychologists-Meet-World-ebook/dp/B0B11X9RH2/ref=tmm_kin_swatch_0?_encoding=UTF8&qid=&sr=
  Paperback format:
  Link to purchase Paperback format:
  https://www.amazon.com/Going-Global-Psychologists-Meet-World/dp/1433836432/ref=tmm_pap_swatch_0?_encoding=UTF8&qid=&sr=

- Additional relevant readings may be assigned.

Course Requirements

In CLASSES, the course materials are organized within the **TABLE OF CONTENTS.**

1. DISCUSSIONS (Weekly)

Each week begins on a Monday and ends on the following Sunday.
(NOTE: The discussion forum for the first week of the semester starts on Tuesday, Jan. 21.)
The main purpose of the online discussions is to enhance your learning of the concepts and applications presented in this course, and to further your thinking and writing skills. Discussions are meant to be insightful, reflective, lively, and thought provoking.

Every Monday, your instructor will post a few questions pertaining to the assigned chapter and/or course requirement. You are expected to actively read and comprehend the materials assigned for that week.

INITIAL Response/s: You are expected to regularly and to actively participate in all the weekly discussions by responding (completely and thoroughly) to each question posted.

FEEDBACK Responses: You are also required to provide "quality" feedback to **at least 2** of your other classmates' and/or instructor's initial postings in a way that makes the discussions intellectually stimulating. You are encouraged to respond to more postings if you want a better participation grade for that week.

Grading of Weekly Discussions:
Grading rubric. This form will be used by your instructor.
[NOTE 1: It will be up to your instructor to determine the quality and frequency of your initial responses to the questions and your feedback to your classmates' (including instructor's) postings. This rubric will serve as a basis for the grading of your discussion forum participation.]
[NOTE 2: Responses deemed to be inappropriate may be deleted by your instructor.]

2. ASSIGNMENTS

The two assignments for the course are (1) "Featured International Psychologist" Project, and (2) Final Paper.

- **"Featured International Psychologist" Project –** PowerPoint (10 - 12 slides)

  Your instructor will provide a list of names of relevant international psychologists from which each

student in class may choose from. You are required to create a **report in the form of a PowerPoint presentation** (or a comparable/compatible presentation software) that highlights the relevant background and contributions of an esteemed individual on the field of international psychology. In addition to the background information that you find about this person, you are also expected to include relevant images, videos, and audio narration of your voice in your presentation. The more multimedia your presentation, the better. You may use the "add notes" feature of PPT and/or insert your recorded voice/narration if you wish. (*Let me know if you have any questions regarding this.)*

Your PowerPoint presentation/slides should contain the following information.
1. Background information of Featured Psychologist (with face photo if available)
2. Contributions to International Psychology
3. List of scholarly publications
4. Additional Information of Interest
5. COMMENTARY

In addition, your project will also be evaluated on the following: (i) Quality of slides, and (ii) Notes and/or Audio content.

Grading of "Featured International Psychologist" Project:
Grading rubric. This form will be used by your instructor.
[NOTE: Details about the grading of your final paper will be presented during the semester.]

- **Final Paper** (4 - 5 pages, single-spaced)

Your instructor will provide you with a list of more than 70+ national, regional and international psychological associations that are part of the ***Global Psychology Alliance*** (https://www.apa.org/international/networks/global-psychology-alliance). Each student will be required to write an in-depth critique (reaction paper) on a particular national psychology organization from this list.
[NOTE: The CRITIQUE section of your final paper may include your own comments about the organization, which includes your thoughts and recommendations about its activities and contributions to the internationalization of psychology. Incorporate what you have learned from the textbook and discussion forums. The number of relevant ideas you include will significantly contribute to the grading of your paper.]

Turnitin will be used to submit papers.

The structure and contents of the paper MUST be organized using the following headings.
1. Description of the organization *(approx. 1 page)*
2. Leaders of the organization *(approx. 1 page)*
3. Membership *(approx. 1 page)*
4. Recent news, events, and activities *(approx. 1 page)*
5. CRITIQUE (Commentary about the organization) *(approx.1- 2 pages)*

In addition, your project will also be evaluated on the following: (i) Writing quality, and (ii) Organization of paper.

Grading of Final Paper:
Grading rubric. This form will be used by your instructor.
Student Grade Form: This form will be used by you and your classmates to help grade your paper.
[NOTE: Details about the grading of your final paper will be presented during the semester.]

Grading System

DISCUSSIONS (Weekly)*		
(20 points per week/forum; 14 weeks/forums)	56%	280 points
ASSIGNMENTS**		
"Featured International Psychologist" Project	14%	70
Final Paper		
Instructor Evaluation	20%	100
Student Grade Form (grades are averaged)	8%	40
Submission of Student Grade Form	2%	10
Total Points:		**500**

** 1 point deducted for each day late. (Per initial response and per feedback response.)*
*** 3 points deducted for each day late.*

Letter-Grade Equivalent
("Strictly" followed)

A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

SCHEDULE

WEEK	TOPIC/s	READING/s*
1 *(1/21 – 1/26)*	What is International Psychology? Video on "International Psychology: What Student Want to Know"	Syllabus; Additional readings

15 *(4/28)*	FINAL COURSE GRADES	

**Supplementary readings may be assigned.*

University Policies and Resources

- ***Academic Integrity***

Students in this course are required to adhere to Pace University's Academic Integrity Code, which supports honesty and ethical conduct in the educational process. It educates students about what constitutes academic misconduct, helps to deter cheating and plagiarism, and provides a procedure for handling cases of academic misconduct. Students are expected to be familiar with the Code, which can be found in University Policies, Disciplinary and Grievance Procedures. Individual schools and programs may have additional standards of academic integrity. Students are responsible for familiarizing themselves with the policies of the schools, programs, and courses in which they are enrolled.

[Pace Graduate Students]
Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any academic paper, report, or submission for academic credit without the appropriate acknowledgement is plagiarism. It is also academically dishonest to submit anything in electronic form as one's own that is the work, either fully or in part, of someone else. It is unethical to present as one's own work, the ideas, words, or representations of another without the proper indication of the source. Therefore, it is the student's responsibility to give credit to any quotation, idea or data borrowed from an outside source. Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension, dismissal, or expulsion from the University. (L-54)

- ***Learning Commons***

The Learning Commons uses an array of programs and a holistic approach to assist students with academic skills and content knowledge. We are dedicated to developing independent learners through purposeful interactions with trained, well-qualified peer and professional staff. Services offered:

- Content Support Services including, content tutoring, exam review sessions, & content preparation/support workshops
- Academic Skills Services including small group peer mentoring, academic skills workshops, and individual academic development
- Writing Support Services including, writing tutoring & writing preparation/support workshops

- ***Procedure for Students Who Wish to Obtain Reasonable Accommodations for a Course***

The same rigorous standards for admission apply to students with and without a disability. In order to support the continued success of students with disabilities, the University prohibits discrimination on the basis of disability and is committed to ensuring equal access for students with disabilities to its facilities, programs, and activities. The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities.

To request an accommodation for a qualifying disability, a student must self-identify and register with the Disability Services Office for his or her campus. The Office of Disability Services is housed in the Counseling Center on the New York City and Pleasantville campuses. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see Information for Students with Disabilities page.

- ***Technological Resources***
  - List of all Pace Information Technology Services.
  - For assistance with a technological concern contact the Pace Helpdesk at (914) 773-3648 or create a help desk ticket.
  - Visit the Learning Remotely website

- ***Appropriate Use Policy for Information Technology***

Pace endorses the following statement on software and intellectual rights distributed by EDUCAUSE, the non-profit consortium of colleges and universities, committed to the use and management of information technology in higher education. The statement reads:

> *Respect for intellectual labor and creativity is vital to academic discourse and enterprise. This principle applies to work of all authors and publishers in all media. It encompasses respect for the right to acknowledgment, right to privacy and right to determine the form, manner and terms of publication and distribution.*
>
> *Because electronic information is volatile and easily reproduced, respect for the work and personal expression of others is especially critical in computer environments. Violations of authorial integrity, including plagiarism, invasion of privacy, unauthorized access and trade secret and copyright violations, may be grounds for sanctions against members of the academic community.*

See Pace's IT appropriate use policy.

- ***Sex-Based Misconduct Policy and Procedure***

Pace University is committed to providing a safe environment for every member of its community and to ensuring that no student, faculty, or staff member is excluded from participation in or denied the benefits of any University program or activity on the basis of sex. Accordingly, the University prohibits the following forms of Sex-Based Misconduct: sexual assault, sexual harassment, gender-based harassment, dating violence, domestic violence, sexual exploitation, and stalking.

Instructors are a **non-confidential** resource and have an obligation to report any information about sexual assault with the Executive Director of Institutional Equity and Title IX Coordinator – Bernard Dufresne, bdufresne@pace.edu, 163 Williams Street, Room 1017, (212) 346-1310. The Title IX/Affirmative Action Office is responsible for investigating violations of the sexual misconduct policy. Go here for more information about the Pace University sexual misconduct policy.

Members of the University community who believe that they have been subjected to Sex-Based Misconduct are encouraged to report such incidents to the University and, where applicable, to local law enforcement. **Confidential** resources include the **University Counseling Centers, Offices of Sexual and Interpersonal Wellness** and **University Healthcare**. Contact information for those offices may be found in the self-care section below.

- ***Self-Care***

Your academic success in this course and throughout your college career depends heavily on your personal health and well-being. Stress is a common part of the college experience, and it often can be compounded by unexpected life changes outside the classroom. The Pace Community strongly encourages you to take care of yourself throughout the term before the demands of midterms and finals reach their peak. Please feel free to talk with me about any difficulty you may be having that may impact your performance in this course as soon as it occurs and before it becomes unmanageable. Please know there are a number of other support services on campus that stand ready to assist you. You are strongly encouraged to contact them when needed as well.

The Counseling Center "Just In Case" information supplies potentially life-saving mental health information to Pace University students, staff, and faculty, putting vital information and support options at your fingertips, just in case you or a friend needs help. Go to the Just in Case page on the Pace website or go to "Counseling Center" on the MyPace or the Pace Safe app.

PSY634
INSTRUCTIONAL PSYCHOLOGY: Multimedia Applications

(CRN #50279)

Summer 2 2021

Instructors: Richard Velayo, Ph.D.
Course Format: Online (Asynchronous)
Office Hours: by appointment – Zoom or phone
Credits (graduate): 3

Description

This 3-credit web-enhanced (online) course is designed as an advanced level course on cognitive principles associated with learning from media (visual, textual, and audio presentations) and the application of these principles in designing multimedia instruction for effective teaching and learning. Drawing from years of research in cognitive and educational psychology, this course provides materials based on the cognitive theory of multimedia learning and principles for the design of multimedia presentations. It aims to help students realize the potential of using words (text and/or audio material) and visual elements (pictures, videos, icons) to promote learning. Students will learn about the basic principles of multimedia instructional design and to demonstrate their knowledge by completing a multimedia project that adheres to these principles. This course relies heavily on the use of Blackboard's discussion board.

Goals and Objectives

- To be knowledgeable and critically think about important concepts in multimedia learning and their applications.
- To understand how people process verbal and visual information based on psychological and educational research and the research that help explain them.
- To demonstrate the principles of effective multimedia learning and presentations by designing and completing a "multimedia project" (e.g., a PowerPoint presentation, website) on a particular topic approved by the instructor.

Prerequisite

Registration for this course requires approval (instructor or program coordinator), including those students who are not matriculated in the MA in Psychology program.

There are no prerequisite course/s required within the MA in Psychology Program. Basic knowledge of and ability to use a presentation software (e.g., PowerPoint, Keynote, Prezi, VoiceThread) or a website-authoring program (e.g., WordPress, Jimdo, Wix) is preferred.

Course Materials

Required Textbook:
Mayer, R. E. (2020). *Multimedia Learning (2nd ed.)*. UK: Cambridge University Press.
(ISBN for Paperback: 978-1316638088; **ISBN for eTextbook:** 978-1107187504**)**

In addition to the required textbook, there may be supplemental materials (which you do not need to purchase) utilized by your instructor which are derived from, but not limited to, the following:

Clark, R. C. & Mayer, R. E. (2016). *E-Learning and the Science of Instruction: Proven Guidelines for Consumers and Designers of Multimedia Learning (4rd ed.).* NJ: Wiley. (ISBN: 978-1119158660)

Kosslyn, S. M. (2007). *Clear and to the Point: 8 Psychological Principles for Compelling PowerPoint Presentations.* Oxford University Press. (ISBN: 978-0195320695)

Mayer, R. E. (2014). *The Cambridge Handbook of Multimedia Learning (2nd ed.).* NY: Cambridge University Press (ISBN: 978-1107610316)

Class Delivery Format/Location

Online: Course is delivered fully remotely with no on-campus components.
Asynchronous (ASYNC): Course is taught online with students participating at their own times. There will be assignments, quizzes/tests, projects and/or discussions that students have the flexibility to complete within a set period **each week**.

How Do I login to CLASSES (also called "Brightspace")?

This online course is taught using CLASSES which may be accessed at CLASSES.pace.edu. Enter your username and password and click the login button; use your MyPace Portal username and password to login (e.g., cw94975n, tr87689w and jc73732p).

CLASSES Resource Center

If you need help with CLASSES, go to https://www.pace.edu/its/learning-management-system/resources. The 24-hour phone support for students is 1-877-325-7778.
Below are links to videos designed for Pace for students on the use of CLASSES.

- **Navigation Overview**: https://mediaspace.pace.edu/media/Classes+Student+Navigation+Overview/1_4gqt84m7
- **Video Tutorial**: https://mediaspace.pace.edu/media/Classes+Student+Video+Tutorial/1_vubjrq05

Pace University COVID-19 Safety

CDC guidelines and University policy require proper face covering use in all classrooms, conference rooms, hallways, elevators, and other common areas. Face coverings are required even if you are more than 6 feet from another individual in a common indoor area. We must work together to protect others and ourselves from the transmission of COVID-19. Any student entering class without a face covering will be asked to: a) wear a face covering or b) go to Security to obtain a face covering if the student does not have one. Students who do neither of these things will be asked to leave class and they will be marked absent for the session. Students are expected to be familiar with the current COVID-19 regulations, which are posted on the Return to Campus website. See also up-to-date policies and announcements and more information about Pace University's response to COVID-19.

Course Documents

Course materials are organized into weekly folders located within the **COURSE DOCUMENTS** button of **Blackboard**. ***Course documents are organized on a weekly basis (beginning on Monday and ending the following Sunday).*** You will see weekly folders that contain the readings/assignments for that week. You are expected to actively read through and comprehend the materials assigned for that week.

COURSE REQUIREMENTS

DISCUSSIONS (WEEKLY)

Every Monday, your instructor will post a few questions pertaining to the assigned chapters to motivate your learning of the course content. Facilitation of a discussion forum will be based on one (or a few) of the chapters from the textbook. For example, Chapter 4 (Coherence Principle) discussion board questions may be as follows:

- *Imagine that you are in a class in which the instructor presents the material on the different parts and function of the human brain in lecture-style format. You find the lecture to be somewhat boring and difficult to understand. How may you, as a learner, enhance your understanding of the lecture using the Coherence Principle in the way you take notes? Explain your answer clearly.*
- *According to Coherence principle number 1, "learning is improved when interesting but irrelevant words and pictures are excluded from a multimedia presentation". Give a specific example of this and explain how you would "redesign" instruction to enhance student learning. Explain the rationale for your "redesign"?*

You are expected to regularly and to actively participate in all the weekly discussions by responding to each of the questions posted. The quality and frequency of your responses will be taken into account towards your grade. You are also expected to provide feedback to other students' responses. Discussions are meant to be *insightful, reflective, lively, and thought provoking.*

Your participation in the weekly discussion contributes significantly toward your final grade. You should respond completely and thoroughly to each of the posted question for the week's discussion board questions. ***Providing "quality" feedback to at least 3 of your other classmates' and/or instructor's initial postings*** in a way that makes the discussions intellectually stimulating will constitute sufficient participation, although you are encouraged to respond to more postings if you want a better participation grade for that week. It will be up to your instructor to determine the quality level of your postings and feedback to determine the appropriate grade for weekly participation in the discussion boards.

The main purpose of the online discussions is to enhance your learning of the concepts and applications presented in this course, and to further your thinking and writing skills.

There is no need to submit a written report for this requirement.

MULTIMEDIA PROJECT

You will be required to develop a multimedia project (which may take the form of a PowerPoint presentation, a website/webpage, a video, or any other format that incorporates the multimedia principles learned from this course. The content material of the multimedia presentation should be clearly defined, specific, uncomplicated, and of interest to you. Your instructor must approve your chosen topic.

In addition, you are required to submit a paper ***(no more than 8 pages, double-spaced)*** that describes how your multimedia project addresses each of the 12 research-based principles in the design of multimedia instruction/messages AND how you think your project may be further improved. Therefore, you are expected to respond to the following four (4) questions:

A. Briefly describe the content material of your project? *(no more than 1 page)*

B. Who is your intended audience AND how is your project meant to be presented (e.g., lecture format in a classroom, individualized instruction over the Internet)? *(no more than 1 page)*

C. How has your multimedia project incorporated each of Mayer's 12 principles of multimedia learning? Provide a specific example for each principle that you applied to your project. *(approximately 4 – 5 pages)*

1. ***Coherence Principle***
2. ***Signaling Principle***
3. ***Redundancy Principle***
4. ***Spatial Contiguity Principle***

5. ***Temporal Contiguity Principle***
6. ***Segmenting Principle***
7. ***Pre-training Principle***
8. ***Modality Principle***
9. ***Personalization Principle***
10. ***Voice Principle***
11. ***Image Principle***
12. ***Embodiment Principle***
13. ***Immersion Principle***
14. ***Generative Activity Principle***

D. How could you make your multimedia project even better? *(approximately 1 page)*

After you have completed your project, your classmates will be given the opportunity to provide you with feedback and to have your project evaluated by them. You will do the same for your classmate's projects. Thus, all projects will be made accessible online and will be evaluated by students using the ***Student Grade Form*** (This form will be made available online). Your instructor will also provide you with feedback/comments. Details on the technical aspects of this requirement will be discussed in the course of the semester.

An ***Individual Member Evaluation*** form must also be submitted. (This form will be made available online). This will allow you to evaluate your own project.

Your Final Project is intended to supplement your learning of the course and to demonstrate your knowledge of important multimedia principles in presenting multimedia instruction.

FINAL EXAM

The ***Final Exam*****,** which will be administered online, shall cover all the chapters of your textbook. It is designed to test your knowledge of the material discussed in the assigned readings and to apply what you have learned from the course. The format may include multiple-choice, true-false, and short answer questions.

Communication

Discussion

The ***Discussion Board*** area has been set up in an asynchronous online format in which students (and the instructor) answer questions, ask questions, comment on the responses of your fellow classmates and instructors. This area can be very valuable to you if you encounter difficulty during the course. Check the Discussion area frequently. Your participation is part of your grade.

If you have personal and/or on-the-job experience relevant to a discussion topic or to a question from one of your fellow students, please do share your experiences as it relates to the chapter/topic covered. Active participation by everyone contributes to a more intellectually stimulating and engaging online learning experience.

Email

Please feel free to contact your instructor or your classmates via **email** at any time if needed. My email address is rvelayo@gmail.com. You classmates' (and instructor) email(s) may be accessed under the "Email" button on the PSY634 Blackboard site.

Course Topics and Schedule

WEEK	TOPIC	REQUIREMENT DUE
1 (July 14 - July 20)	***COURSE INTRODUCTION*** **<u>SECTION 1</u>: Introduction to Multimedia Learning** CHAPTER 1: The Promise of Multimedia Learning CHAPTER 2: Science of Learning: Determining How Multimedia Learning Works CHAPTER 3: Science of Instruction: Determining What Works in Multimedia Learning CHAPTER 4: Science of Assessment: Determining What Was Learned in Multimedia Learning CHAPTER 5: Multimedia Principle	**Post your self-introduction on Discussion Board forum called "PSY634 Lounge"** **(Due: July 20)**
2 (July 21 - July 27)	**<u>SECTION 2</u>: Principles for Reducing Extraneous Processing in Multimedia Learning** CHAPTER 6: Coherence Principle CHAPTER 7: Signaling Principle CHAPTER 8: Redundancy Principle CHAPTER 9: Spatial Contiguity Principle CHAPTER 10: Temporal Contiguity Principle	
3 (July 28 - August 3)	**<u>SECTION 3</u>: Principles for Managing Essential Processing in Multimedia Learning** CHAPTER 11: Segmenting Principle CHAPTER 12: Pre-training Principle CHAPTER 13: Modality Principle	**TOPIC for Multimedia Project** **(Due: August 3)**
4 (August 4 - August 10)	**<u>SECTION 4 (Part 1)</u>: Principles for Fostering Generative Processing in Multimedia Learning** CHAPTER 14: Personalization Principle CHAPTER 15: Voice Principle CHAPTER 16: Image Principle	

5 (August 11 - August 17)	**<u>SECTION 4 (Part 2):</u> Principles for Fostering Generative Processing in Multimedia Learning** CHAPTER 17: Embodiment Principle CHAPTER 18: Immersion Principle CHAPTER 19: Generative Activity Principle	**Multimedia Project** **(Due: Aug. 17)**
6 (August 18 - August 24)	**<u>SECTION 5</u>: Conclusion** CHAPTER 20: Principles of Multimedia Design ***COURSE Wrap-up and EVALUATION***	**Final Exam** **(Due/Complete by Aug. 24)** **Student Grade Form for Multimedia Project** **(Due: Aug. 24)** **Self-Evaluation Form for Multimedia Project** **(Due on Aug. 24)**

Grading

Each of the activities below constitutes part of your grade. Failure to participate in one or more activities may result in a significant reduction in your grade.

Final grades are calculated as follows:

Participation (Weekly Discussion Board) *(15 points per chapter; 14 chapters)*	42%	210 points
Final Project:		
Feedback from Class	10%	50
Feedback from Instructor	20%	100
Self-Evaluation Form	4%	20
Submission of Student Grade Form (SGF)	4%	20
Final Exam	20%	100
Total	**100%**	**500 points**

<u>Note</u>: *Three (3) points are subtracted for each day a course requirement is submitted late.]*

Letter-Grade Equivalent
("Strictly" followed)

A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

Attendance

Attendance is in the form of participation in the discussion board. Successful online learning requires that a student actively participates in each week's learning materials including:

- **Reading** textbook chapters, plus any articles and/or web materials assigned.
- **Submission** of assignments, projects and papers on time.
- **Completion** of the course requirements (e.g., exams, final project).
- **Participation** in the weekly discussion board forums, and other activities.

Excessive non-participation and failure to keep up with the course pace may result in a decreased or failing course grade. This is ***not a self-paced course***. Within each week, assignments may be worked on at times convenient to the student. However, the assignments are to be completed by the end of that academic week If you are unable to participate during a particular week, please contact the instructor beforehand.

Academic Integrity Code (Graduate)

Students in this course are required to adhere to Pace University's Academic Integrity Code. The Academic Integrity Code supports honesty and ethical conduct in the educational process. It educates students about what constitutes academic misconduct, helps to deter cheating and plagiarism, and provides a procedure for handling cases of academic misconduct. Students are expected to be familiar with the Code, which can be found under "University Policies" in the Student Handbook. You may also access it at http://www.pace.edu/student-handbook/university-policies-disciplinary-and-grievance-procedures

Individual schools and programs may have additional standards of academic integrity. Students are responsible for familiarizing themselves with the policies of the schools, programs, and courses in which they are enrolled.

[Pace Graduate Students]
Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any academic paper, report or submission for academic credit without the appropriate acknowledgement is plagiarism. It is also academically dishonest to submit anything in electronic form as one's own that is the work, either fully or in part, of someone else. It is unethical to present as one's own work, the ideas, words or representations of another without the proper indication of the source. Therefore, it is the student's responsibility to give credit to any quotation, idea or data borrowed from an outside source. Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension, dismissal or expulsion from the University. (L-54)

Indigenous Land Acknowledgement

The Pace University NYC campus and its surroundings are located on the traditional lands of the Lenape people.

Students with Disabilities

The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request a reasonable accommodation for a qualified disability a student with a disability must self-identify and register with Student Accessibility Services for their campus. (NYC Campus: 212-346-1526; 156 William St., 8th floor). No one, including faculty, is authorized to evaluate the need for or grant a request for an accommodation except Student Accessibility Services. Moreover, no one, including faculty, is authorized to contact Student Accessibility Services on behalf of a student. For further information, please see Resources for Students with Disabilities page at https://www.pace.edu/counseling/student-accessibility-services

Justice, Equity, Diversity, and Inclusion

This course covers some topics that may be personal, upsetting, unfamiliar, and/or difficult for us, making it especially important that we all treat each other with compassion and respect. Disagreement and debate are good and encouraged, and they should focus on the issue, not attacking any individual. While we discuss and debate different points of view, we are all expected to contribute to justice, equity, and inclusion, and to support everyone feeling welcome to share, explore, learn, and grow together in this course. Comments that are stigmatizing based

on identities/positionalities, such as ability, age, ethnicity, gender/sex identity/expression, immigration status, national origin, race, religion, sexual orientation, social class, or weight/physical appearance, among others, are not welcome in class. Sometimes without intending to or being aware, we commit microaggressions, which involve saying or doing things that are stigmatizing and harmful to members of a marginalized group. It helps us all learn if we inform each other when we commit microaggressions or say something discriminatory. If you are ever upset with any comments made (including by me) in class or any other aspect of the course, please communicate this in some way, either to the entire class or me individually.

Pace University is committed to preventing and provides support for survivors of sexual assault and gender-based harassment. For more information: https://www.pace.edu/sexual-wellness

Pace University has an Office of Multicultural Affairs (https://www.pace.edu/multicultural-affairs/nyc) that provides support in the area of diversity broadly and an LGBTQA & Social Justice Center (https://www.pace.edu/lgbtqa-center) that provides support in the areas of sexual and gender identity and expression. Both of these offices are located on the 9th floor of 41 Park Row, but will likely be operating primarily remote/online for the Fall 2020 semester.

Pace University provides support for international students and scholars: https://www.pace.edu/international-students-scholars

Pace University allows students to use the name and salutation of their choice for some campus systems (e.g., campus ID, academic record/transcript/diploma). For more information: https://www.pace.edu/lgbtqa-center/resources-services/preferred-first-name-procedure

Title IX Coordinator: Title IX makes it clear that violence and harassment based on sex and gender are Civil Rights offenses subject to the same kinds of accountability and the same kinds of support applied to offenses against other protected categories such as race, national origin, etc. If you or someone you know has been harassed or assaulted, you can contact Juliette Verrengia, MSW, jverrengia@pace.edu, 212-346-1931 (Director, Office of Sexual Assault Prevention and Education) or A. Lisa Miles, 212-346-1310, amiles@pace.edu (Title IX Coordinator). If you have any questions about Title IX, I invite you to speak with me or to contact Ms. Verrengia or Ms. Miles.

PSYCHOLOGY 643

Psychology at the United Nations

(CRN #71411)
(Fall 2023)

Class Schedule

Days/Times: Fridays, 1:20pm – 4:20pm (via ZOOM)

Instructors

Florence L. Denmark, Ph.D.
Email: fdenmark@pace.edu
Office Hours: by appointment (by phone)
Phone: 646-983-0890

Richard S. Velayo, Ph.D.
Email: rvelayo@gmail.com or rvelayo@pace.edu
Office Hours: by appointment (remote or by phone)

Course Description

The United Nations (UN) is a complex, somewhat mythical world which serves as the meeting-ground for political powers from around the world. It is unique among international institutions, considering the vast array of tasks entrusted to it. The UN is involved in all aspects of human activity; it therefore plays an important role in the global community. "Global" is a word that is used to refer to issues and concerns of the entire world while "international" is a term that is used to refer to issues and concerns of two or more countries. While not always successful in implementation, the United Nations takes a global stance on world issues.

This 3-credit graduate-level course will consider the history of the United Nations, how it functions, and the role of psychology and psychologists at the United Nations. Guest speakers who are active in the United Nations will be invited to speak to the class. Students will be assigned UN-relevant topics to present in class.

Prerequisite

There are no graduate course prerequisites.

Learning Objectives

At the end of this course, a student should be able to demonstrate the following competencies:

- Identify and describe key events and structures related to the history of the United Nations.
- Determine the function and structure of the United Nations.
- Describe and appraise one's tour (guided or virtual) of the United Nations Headquarters (in NY).
- Assess psychology's impact on United Nations objectives.
- Apply, examine, and assess the role of psychologists/psychology at the United Nations.

Class Delivery Format/Location

Online: This course is delivered fully remotely with no on-campus components.

- Synchronous (SYNC): This course is taught online in real time using *ZOOM*. Students will be required to participate at set times from their own home/residence hall or remote location. *[NOTE: CLASSES will also be utilized for this course. Students are responsible for assuring that they have access to both CLASSES and ZOOM.]*

Course Materials (Required text and other materials)

1. United Nations Website

Web-based materials derived from the website of the United Nations (www.un.org) will be utilized. Other relevant online sources will be included as determined by the instructors.

2. Textbook

Congress, E.P., Takooshian, H., & Asper, A. (Eds.). (2020). *Behavioral Science in the Global Arena: Addressing Timely Issues at the United Nations and Beyond*. Information Age Publishing.

(NOTE: Below are links to two formats of this book. The Kindle format is recommended.)

Course Requirements

1. PARTICIPATION

- **Attendance (via ZOOM)**
  Students are expected to be connected to Zoom during the entirety of each class meeting. Points may be deducted for late attendees or those who only attend part of the meeting. Instructor/s will set the policy on the use of chat, video, and audio functions.

- **Discussions**
  There will be weekly questions posted on CLASSES for students to respond to.

- **In-class Topic Presentations**
  [See Grading rubric for this requirement.]
  Each student will present (via Zoom) at least two (2) topics covered in the course.
  TOPIC #1: U.N. website (https://www.un.org/)
  TOPIC #2: Select textbook chapter
  Chapter 2: **Aging**
  Chapter 3: **Child Welfare and Well-Being**
  Chapter 4: **Migrant Adaptations and Well-Being**
  Chapter 5: **Gender Equity and Reproductive Justice**
  Chapter 6: **Poverty and Inequality**
  Chapter 7: **Social Protection**

Chapter 8: **Freedom and Democracy**
Chapter 9: **Human Rights**
Chapter 10: **Counter-Terrorism**
Chapter 11: **Crime Prevention and Control**
Chapter 12: **Mental Health: Happiness and Well-Being**
Chapter 13: **Physical Health**
Chapter 14: **Disaster and Trauma Intervention**
Chapter 15: **Promoting Environmental Health**
Chapter 16: **Reducing Urban Noise**

2. PAPERS

- **Tour (Guided or Virtual) of U.N. Headquarters (NYC)** – Reaction Paper (1-page, single-spaced)

- **Interview a Psychologist involved with the U.N.** – Written Report (2 - 3 pages, single-spaced)
  - A list of interview questions to be provided by your instructor/s.
  - The psychologist to be interviewed must be approved by your instructor/s.
  - A write-up of the interview AND a brief in-class presentation of the write-up are required.

- **NGO Committee meeting/event** – Reaction Paper (1-page, single-spaced)

- **Final Paper** (3 - 4 pages, single-spaced) *[See Grading rubric for this requirement.]*
  - The final paper is a critique on one of the chapters from the course textbook.
  - There shall be NO duplication of topics/chapters between students.
  - Final papers will be submitted via *Turnitin.*
  - Students will present their final papers in class (via ZOOM) towards the end of the semester.

Grading System

Course Requirements	**Points**
PARTICIPATION (Weekly)	
Attendance (24%)	120
10 points subtracted for each meeting absent.	
5 points subtracted if more than 30 minutes late.	
Discussions (weekly) (6%)	30
Late postings are NOT accepted.	
Three (3) points subtracted for not posting on a forum.	
In-class Topic Presentations (via ZOOM) (20%)*	
Topic #1: A topic from the U.N. website	50
Topic #2: A chapter from the textbook	50
PAPERS*	
Tour (Guided or Virtual) of the U.N. Headquarters (NYC) – Reaction Paper (6%)	
Written Report	25
Brief (in-class) presentation (via ZOOM)	5
"Interview a Psychologist Involved with the U.N." (11%)	
Written Report	50
Brief (in-class) presentation (via ZOOM)	5
NGO Committee Meeting or Event – Reaction Paper (6%)	
Written Report	25
Brief (in-class) presentation (via ZOOM)	5
Final Paper (27%)	
Instructor Evaluation *(See Grading Rubric)*	80
Student Grade Form *(Grades are averaged)*	20
Submission of Student Grade Form	10
Paper Presentation (In-class) *(via ZOOM)*	25
Total points	**500**

***[Note:** Two (2) points subtracted for each day a course requirement is late.]*

Letter-Grade Equivalent
("Strictly" followed)

A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

SCHEDULE

General outline of class meetings:

1. Reminders + Instructor introduction to the topic(s) *(20 min.)*
2. Featured Speaker *(60 min.)* (and/or class activity/discussion)
3. Break (Optional) *(10 min.)*
4. Student In-class Presentation/s of assigned weekly topic/s *(40+ min.)* (and/or class activity/discussion)
   [NOTE: PowerPoint file must be sent to instructors the day prior to the presentation date. It will be uploaded to CLASSES by your instructor.]

(Times indicated above are approximate.)

WEEK 1 & 2 (9/08, 9/15): **COURSE OVERVIEW**
Overview of the UN website
History of the UN (including *League of Nations*)
Behavioral Sciences at the U.N. *(Chapter 1 of textbook)*

WEEK 3 & 4 (9/22, 9/29): **ABOUT THE U.N.**
- Member States
- Main Bodies
- Secretary-General
- Secretariat
- UN System
- History
- Emblem and Flag
- UN Charter
- UDHR (Universal Declaration of Human Rights)
- ICJ (International Court of Justice) Statute
- Nobel Peace Prize

WEEK 5 & 6 (10/06, 10/13): **Part 1: WHAT DOES THE U.N. DO?**
- Peace and Security
- Human Rights
- Humanitarian Aid
- International Law

WEEK 7 (10/20): **PART 2a: WHAT DOES THE U.N. DO?**
- Support Sustainable Development (UN Sustainable Development Goals) and Climate Action

WEEK 8 (10/27): **PART 2b: WHAT DOES THE U.N. DO?**
Support Sustainable Development (UN Sustainable Development Goals) and Climate Action

DUE 10/27: Tour (Guided or Virtual) of the U.N. Headquarters (NYC) (Reaction Paper)

WEEK 9 (11/03): **PART 3: WHAT DOES THE U.N. DO?**
- Global Issues
- Documents
- Official Languages
- Observances

WEEK 10 (11/10): **OTHER TOPICS ABOUT THE U.N.**
- Events and News
- Get Involved

DUE 11/10: Interview a Psychologist Involved with the U.N. (Written Report)
In-class presentation of Interview write-up (via ZOOM)

WEEK 11 (11/17): **Psychology and the Future of the UN**
- Annual Psychology Day at the U.N.
- What is the APA and other international psychology organizations doing?
- Engaging Students in the work of the U.N.

DUE 11/17: NGO Committee Meeting/Event (Reaction Paper)

WEEK 12 (11/24): **NO CLASS** (Thanksgiving Break)

WEEK 13 (12/01): **FINAL PAPER Presentations** (via ZOOM)

DUE 12/01: FINAL PAPER

WEEK 14 (12/08): **NO CLASS [Tentative; possible "snow day"]**

DUE 12/06: STUDENT GRADE FORM *(Part of FINAL PAPER requirement)*

WEEK 15 (12/15): **NO CLASS**

University Policies and Resources

- ***Academic Integrity***

Students in this course are required to adhere to Pace University's Academic Integrity Code, which supports honesty and ethical conduct in the educational process. It educates students about what constitutes academic misconduct, helps to deter cheating and plagiarism, and provides a procedure for handling cases of academic misconduct. Students are expected to be familiar with the Code, which can be found in University Policies, Disciplinary and Grievance Procedures. Individual schools and programs may have additional standards of academic integrity. Students are responsible for familiarizing themselves with the policies of the schools, programs, and courses in which they are enrolled.

[Pace Graduate Students]
Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any academic paper, report, or submission for academic credit without the appropriate acknowledgement is plagiarism. It is also academically dishonest to submit anything in electronic form as one's own that is the work, either fully or in part, of someone else. It is unethical to present as one's own work, the ideas, words, or representations of another without the proper indication of the source. Therefore, it is the student's responsibility to give credit to any quotation, idea or data borrowed from an outside source. Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension, dismissal, or expulsion from the University. (L-54)

- ***Learning Commons***

The Learning Commons uses an array of programs and a holistic approach to assist students with academic skills and content knowledge. We are dedicated to developing independent learners through purposeful interactions with trained, well-qualified peer and professional staff. Services offered:

- Content Support Services including, content tutoring, exam review sessions, & content preparation/support workshops
- Academic Skills Services including small group peer mentoring, academic skills workshops, and individual academic development
- Writing Support Services including, writing tutoring & writing preparation/support workshops

- ***Procedure for Students Who Wish to Obtain Reasonable Accommodations for a Course***

The same rigorous standards for admission apply to students with and without a disability. In order to support the continued success of students with disabilities, the University prohibits discrimination on the basis of disability and is committed to ensuring equal access for students with disabilities to its facilities, programs, and activities. The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities.

To request an accommodation for a qualifying disability, a student must self-identify and register with the Disability Services Office for his or her campus. The Office of Disability Services is housed in the Counseling Center on the New York City and Pleasantville campuses. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see Information for Students with Disabilities page.

- ***Technological Resources***
  - List of all Pace Information Technology Services.
  - For assistance with a technological concern contact the Pace Helpdesk at (914) 773-3648 or create a help desk ticket.
  - Visit the Learning Remotely website

- ***Appropriate Use Policy for Information Technology***

Pace endorses the following statement on software and intellectual rights distributed by EDUCAUSE, the non-profit consortium of colleges and universities, committed to the use and management of information technology in higher education. The statement reads:

> *Respect for intellectual labor and creativity is vital to academic discourse and enterprise. This principle applies to work of all authors and publishers in all media. It encompasses respect for the right to acknowledgment, right to privacy and right to determine the form, manner and terms of publication and distribution.*
>
> *Because electronic information is volatile and easily reproduced, respect for the work and personal expression of others is especially critical in computer environments. Violations of authorial integrity, including plagiarism, invasion of privacy, unauthorized access and trade secret and copyright violations, may be grounds for sanctions against members of the academic community.*

See Pace's IT appropriate use policy.

- ***Sex-Based Misconduct Policy and Procedure***

Pace University is committed to providing a safe environment for every member of its community and to ensuring that no student, faculty, or staff member is excluded from participation in or denied the benefits of any University program or activity on the basis of sex. Accordingly, the University prohibits the following forms of Sex-Based Misconduct: sexual assault, sexual harassment, gender-based harassment, dating violence, domestic violence, sexual exploitation, and stalking.

Instructors are a **non-confidential** resource and have an obligation to report any information about sexual assault with the Executive Director of Institutional Equity and Title IX Coordinator – Bernard Dufresne, bdufresne@pace.edu, 163 Williams Street, Room 1017, (212) 346-1310. The Title IX/Affirmative Action Office is responsible for investigating violations of the sexual misconduct policy. Go here for more information about the Pace University sexual misconduct policy.

Members of the University community who believe that they have been subjected to Sex-Based Misconduct are encouraged to report such incidents to the University and, where applicable, to local law enforcement. **Confidential** resources include the **University Counseling Centers, Offices of Sexual and Interpersonal Wellness** and **University Healthcare**. Contact information for those offices may be found in the self-care section below.

- ***Self-Care***

Your academic success in this course and throughout your college career depends heavily on your personal health and well-being. Stress is a common part of the college experience, and it often can be compounded by unexpected life changes outside the classroom. The Pace Community strongly encourages you to take care of yourself throughout the term before the demands of midterms and finals reach their peak. Please feel free to talk with me about any difficulty you may be having that may impact your performance in this course as soon as it occurs and before it becomes unmanageable. Please know there are a number of other support services on campus that stand ready to assist you. You are strongly encouraged to contact them when needed as well.

The Counseling Center "Just In Case" information supplies potentially life-saving mental health information to Pace University students, staff, and faculty, putting vital information and support options at your fingertips, just in case you or a friend needs help. Go to the Just in Case page on the Pace website or go to "Counseling Center" on the MyPace or the Pace Safe app.

PSYCHOLOGY 617*

HUMAN LEARNING

(NY 90856)

Fall 1999

Instructor:	Richard S. Velayo, Ph.D.
Lecture Meetings:	Wednesdays, 5:30 pm - 8:10 pm
Office:	41 Park Row, Room 1601A 346-1506 (office phone)
Office Hours:	T, R 2:30 pm - 5:00 pm (or by appointment)
Prerequisite:	None (but preferably an undergraduate course on Learning Theory)
URL:	http://webpage.pace.edu/rvelayo/fall1999.htm
Web Board:	http://webboard.pace.edu:8080/~velayo
E-mail:	rvelayo@pace.edu

Brief Course Description

This course introduces both basic and advanced principles and theories of learning and motivation, including cognition. Conditioning, behavior systems, generalization and discrimination, information processing, and complex cognitive functioning are some of the topics discussed. Research on learning theory and their general application to a variety of contexts will be covered.

Classes will generally have a discussion format in which students actively participate by asking questions, thinking critically about the concepts presented in the course, and determining appropriate ways to apply such concepts. You are also expected to have read the assigned materials prior to a class meeting and be prepared to answer questions posed.

Your enrollment in this course will require intensive reading and understanding of the text and assigned readings. There may be some small group or individual exercises, presentations, and a final project that will test your ability to apply concepts learned from the course. Details regarding these requirements will be explained in the course of the semester.

In addition, films relating to some of the topics covered may be shown occasionally.

The specific objectives of this course are as follows:

- Demonstrate understanding of the basic "learning" concepts and principles of both by answering questions on exams and by appropriate application of these principles and concepts to a variety of contexts.
- Ask and answer questions in class that correctly use basic concepts, terms, and principles from the field of applied behavior management.
- Evaluate practical problems in behavior management and thereby identify the objective target behaviors (responses), the environmental conditions (stimuli), and the significant consequences (reinforcers, punishers, and other contingencies) that require change.
- Be aware of the ethical considerations regarding the applications and techniques discussed in the course, given a specified context.
- Be able to critique research on the use of behavior modification techniques.
- Determine the feasibility of implementing a behavior modification program.

- Write a behavior modification program/proposal for intervention and behavior change in an actual problem situation.

Text (Required):

Lieberman, D. A. (2000). Learning: Behavior and Cognition. (3rd ed.). Pacific Grove, CA: Brooks/Cole.

Other readings may be assigned.

You are expected to have read the assigned textbook chapters prior to a class meeting. As a graduate course in psychology, you are expected to come to class prepared to learn by discussing issues and principles that you find particularly interesting or difficult.

Exams

There will be two exams, a Midterm and a Final (125 points each) that will cover the chapters in the text and lecture materials. The format will be short answer, multiple-choice, and possibly some true-or-false items.

Make-up exams will be given only for excused absences (e.g., medical reasons and the like) and will obviously be different from the exam administered during the scheduled time (and generally require more in-depth knowledge of the material). Missing an exam will require a valid written excuse. Arrangements for a make-up exam must be made within one week following the test date or a grade of 0 may be given.

Session Facilitation

This activity will primarily require you to facilitate a discussion session based on a textbook chapter assigned in class. For each session, you will be in charge of facilitating discussion on the topic to be covered that day. You may be creative in doing this. For example, you may have the class do an exercise, evaluate literature, critique a film, discuss a controversial topic, etc., so long as you cover the major concepts in that chapter.

You are also expected to develop an "activity" for the entire class using the WEB BOARD (http://webboard.pace.edu:8080/~velayo). This will help not only enhance your knowledge and critical thinking skills on some content area covered in the course but also to learn about the use of technology as a pedagogical tool.

The class will also provide you with brief written feedback form with a corresponding grade based on your facilitation of the session.

I will provide the class with a discussion sheet a week prior to the discussion of the chapter to make it easier to focus on the more important concepts. Use this sheet to prepare yourself for each session.

The other members of the class are expected to actively contribute.

Presentation of Behavioral Technique/s

Teams (or an individual) will be formed to introduce and demonstrate certain behavior modification techniques to the class. You may do your presentation in whatever format you think will motivate the class to learn, but it should not be solely based on the textual readings. You may present these techniques through demonstrations, role-playing, skits, brief surveys, etc. Nonetheless, it is important that you let me know one week ahead of time the format and added content (if any) of your team's presentation. Time limit: 15 minutes

You may also use the WEB BOARD (http://webboard.pace.edu:8080/~velayo) to supplement your presentation.

The behavioral techniques that will be covered for presentation is listed at the end of this syllabus.

Behavior Modification Project (Group or Individual)

A major requirement of this course is to develop a proposal for a behavior modification program for a problem situation in a context of your choice. This will involve determining a feasible program to modify a problem behavior. Details on possible topics, and how to do the program will be discussed during the semester.

The behavior modification project may be done as a team (2 or 3 people) or individually. The project's topic must be submitted for approval on or before **October 6** (Wednesday).

An oral presentation of your project is expected before the end of the semester. This should last no longer than 30 minutes and should follow the format of the write-up. Allow some time for other members of the class to ask questions about your project.

The write-up of the program should be typewritten, double-spaced, and should be written in the following outline format:
(Important Note: Each component part of each section of the write-up should be incorporated in one paragraph, if possible. Otherwise, make sure that each component part is clearly labeled.)

I. Problem Description and Assessment (20 pts.)
- Define important terms.
- Present related literature.
- Describe, in detail, the subject/individual with the behavioral problem.
- How will you assess if the problem involves a behavioral excess, deficiency, or inappropriateness?
- Analyze the antecedents and consequences of the problem behavior.
- What are some of your behavioral assessment sources?
- Why is it feasible to use behavior modification in such situation?

II. Baseline Data (10 pts.)
- Include a "behavioral recording chart" to assess the target behavior.
- Gather preliminary data on the rate, frequency, duration, magnitude, and/or latency of the target behavior over a period of time in which it occurs.
- Present the data using tables, graphs, and relevant descriptive statistics. Describe them thoroughly.

III. Intervention Planning (20 pts.)

Formulate specific behavioral goals of the program including initial, intermediate, and long-term ones.

Describe the concepts and techniques used and why you think this is (these are) the most feasible to use.

Speculate on the amount of time and what resources are necessary to undertake the program.

What specific behaviors will you keep a record of and how?

How will you evaluate the effectiveness of the program?

What are the ethical considerations you need to observe?

Plan for generalization and maintenance of the behavior change.

IV. Potential Problems (10 pts.)

Enumerate some of the methodological, contextual, and ethical problems you may encounter in the implementation of your program. In what way could these be potential problems to your program?

How do you plan on minimizing or eliminating them?

V. References (5 pts.)

Writing Quality (5 pts.)

- Grammar, spelling, coherence, etc.

Note: ***Late submissions will not be accepted*** *unless due to unavoidable circumstances.*

An **individual member evaluation form** must also be submitted (separately or with the write-up) on or before **December 22** (Wednesday). You will be given this form sometime during the semester. This will allow you to evaluate each member of your group, including yourself.

Extra Credit Work

You may choose only one of the following for extra credit:

(i) **Article Critique** (? points)

This optional requirement is based on outside reading and evaluation of psychological literature that is related to the course. You must first obtain approval from me regarding the article you have chosen. Choose an empirical article of interest to you that has appeared in the last five or six years (1993 - present).

If you choose to do an article critique for extra credit, you are expected to write a 3-4 page critique (typewritten, double-spaced) of the article you have chosen and approved by me. This must be turned in by **December 22** (Wednesday). Late submissions will NOT be accepted. It should contain a full citation and attach a copy of the article to your critique. The format of your paper should contain the following:

1) Problem - Describe the nature of the problem or main research question in and motivation that the author is addressing.
2) Method/s - Describe the methods (subjects, apparatus, procedures) that the author use to answer the experimental question.
3) Results - Describe the most important key results, particularly those that answer the main experimental question.
4) Implications - What are the implications of the results for theories of learning, especially in relation to relevant text chapters.

I suggest that you do not wait until the last minute to do the article critique because this may interfere with studying for your Final Exam.

(ii) **Participation in a Research Project** (? points)

You are encouraged to participate in a research project involving some aspect of learning, memory, and cognition. Details on some of these projects will be made available in the course of the semester.

Other Reminders

- You may find some of the answers to your questions pertaining to this course in this syllabus. . . so read it carefully!
- Ask me if something isn't clear. I'm quite approachable. . . really! . . . well, most of the time :)
- Keep all papers returned to you.
- There is no such thing as bargaining for a grade. . . unless there is an error in correction or computation.
- During our class meetings, I encourage you to share some of your experiences and/or expertise as it relates to this course.
- Put a smile on your face . . . it cools the brain! (see research by Zajonc)

Grading System

MIDTERM Exam	125
FINAL Exam	125
Session Facilitator	50
Class Feedback of Session	40
Presentation of Behavioral Technique	30
Behavior Modification Project:	
Oral Presentation	40
Write-up	70
Individual Member Evaluation	20
Extra Credit Work:	
Article Critique	?
Participation in Research Project	?
Total points	**500+**

Letter-Grade Equivalent
(will be "strictly" followed)

PSYCHOLOGY 615*

Research Design and Statistics 1

(NY 44986)

Spring 2000

Instructor:	Richard S. Velayo, Ph.D.
Meetings:	Wednesdays, 5:30pm - 8:10pm, Birnbaum Electronic Classroom or TBA
Office:	41 Park Row, Rm. 1601-A 346-1506 (office phone)
Office Hours:	T, R 2:30 p.m. – 5:00 p.m. (or by appointment)
Prerequisite:	None
URL:	http://courseinfo.pace.edu/courses/psy615/
E-mail:	rvelayo@pace.edu

Course Objectives

This is an intensive three-hour per week graduate course that will introduce you to psychological research design, descriptive and inferential statistical techniques in psychology, and other topics pertinent to conducting research in psychology. The major objectives of this course are for you to become aware of the process in doing psychological research, become familiar with written communication and interpretation of statistical information, and to develop the critical thinking skills to determine when and how to use a particular statistical technique given a specific research problem.

Films and the use of statistical software will supplement your learning in the course.

Texts (Required)

Leong, F. & Austin, J. (1996 or latest edition). The Psychology Research Handbook: A Guide for Graduate Students and Research Assistants. Thousand Oaks, CA: Sage.

Hurlburt, R. (1998). Comprehending Behavioral Statistics (2nd edition). Pacific Grove, CA: Brooks/Cole.

Kirkpatrick, L. & Feeney, B. (2000). A Simple Guide to SPSS for Windows for Versions 8.0 & 9.0 (Revised Edition). Pacific Grove, CA: Wadsworth.

Statistical Package (Recommended):

SPSS-PC statistical software (latest Windows version if possible)

Supplementary Films

Annenberg/CPB Collection. (1990). Against all odds: Inside statistics. [Videotapes.]

*http://courseinfo.pace.edu/courses/psy615/

Chapter Presentations (team project)

You will be assigned to present some chapters (out of the 24 chapters of Parts I - V) from The Psychology Research Handbook (Leong and Austin, 1998) in class. The presentation should be about **15 minutes** and should conform to the following format:

- A summary of the important points of the chapter/s supplemented with examples, demos, etc.
- An open forum to allow you to respond to questions from the class and the instructor
- Distribute a "summary" of the content of your presentation.

Assignment of chapters to be presented will be done early during the semester. There is no need to submit a written report for this requirement.

A Student Feedback form will be distributed to other members of the class to evaluate your presentation. This will constitute part of your grade for this requirement.

Class Research Project (CRP) (team project)

This requirement involves the entire class undertaking a research project designed by your instructor. You will collect data, analyze the part of the CRP data of interest to you, and gather literature related to the research data you will or have analyzed. In addition, you (and your partner/s) will be given the opportunity to present your statistical analyses of the research data and the related literature you have gathered during the last few class meetings. You will be given **20 minutes** to present your work pertaining your statistical analyses of the CRP data. Additional time will be allotted for open discussion. You are advised to utilize useful paraphernalia to supplement your presentation (e.g., audio-visual aids, demonstration activities, etc.).

[NOTE: There should be NO duplication of that part of the CRP data that the teams will present.]

A written paper on the content of your presentation is required. It must be typed in APA-style format. This will be discussed in the course of the semester.

Your conduct in carrying out your research is very important and will contribute towards a significant part of your grade.

Statistics Exercises (individual project)

There are **5 statistics exercises** in this course. You are expected to submit 4 of the 5 exercises. No makeup exercise/s will be given. If you decided to do all 5 exercises, the lowest grade is eliminated from the computation of the final grade. Each exercise is worth 15 points. 2 points are deducted for each day the exercise is turned in late.

In addition, you will be required to present a brief demonstration of one of the chapters in the SPSS for Windows text (Kirkpatrick & Feeney, 2000). This SPSS statistical package will be used as an integral part of this requirement.

These exercises are meant to further develop your understanding of statistics in psychological research and to critically think about when to appropriately use each statistical tool in analyzing research data.

Class Participation

This requirement will be based on your in-class participation and your responses to the "Discussion Forum" set up for this class at http://courseinfo.pace.edu/courses/psy615/. Details pertaining to the Discussion Forum will be discussed in class.

Final Exam

There is a Final Exam, each of which will cover ALL the chapters of your textbooks (Leong and Austin, 1998; Hurlburt, 1998). The exam will test your knowledge of how to apply what you have learned in class. The format may include multiple-choice, true-false, and short-answer questions. A review sheet will be provided about a week prior to the scheduled exam.

Grading System

Requirement/s	Points
CHAPTER PRESENTATION/S STUDENT FEEDBACK OF PRESENTATION/s	75 25
STATISTICS EXERCISE 4 out of 5 exercises, no makeup/s given (@15 points each) SPSS Presentations	 60 25
CLASS PARTICIPATION	40
CLASS RESEARCH PROJECT (CRP) CRP Paper CRP Presentation	 100 75
FINAL EXAM	100

TOTAL POINTS: 500

PSYCHOLOGY 624

Cognitive Psychology

(CRN #20949)
(Spring 2014)

Instructor:	Richard Velayo, Ph.D.
Meetings:	Wednesdays, 5:40pm - 8:30pm, Room E101 (Birnbaum Electronic Classroom)
Office Hours:	Tuesdays and Thursdays, 3:00pm - 5:30pm (by appointment)
Office Location:	Psychology Dept., 41 Park Row, Rm. 1310, New York, NY 10038
Office Phone:	(212) 346-1558
Credits:	3
Course URL:	http://blackboard.pace.edu/
E-mail:	rvelayo@pace.edu

Course Description

This graduate-level course examines cognitive processes, often called "higher mental processes." Cognitive psychology includes topics such as perception, memory, language, and thinking. This course will give you an appreciation of research and theory in cognitive psychology, an understanding of the methods used to gather and evaluate evidence about cognitive processes, and an understanding of the ways in which knowledge of these processes has been applied to solve problems and improve the quality of life. Though this course requires a fairly sophisticated background in psychology, it will begin with a basic overview of cognition. Discussion of key research on cognition is covered. Note that much of the research in cognitive psychology is methodologically complex, especially because of the challenge of assessing covert mental processes.

The content material covered in this course will require your active reading of the assigned materials (i.e., textbook chapters, assigned articles) and your regular class participation. You will also be required to write an in-depth written critique of an article that is of interest to you. In addition, there is a Midterm exam and a Final exam based on the concepts covered in the textbook and on the application of the key concepts covered.

Blackboard, a distance learning software program, will be utilized to supplement regular classroom meetings.

Prerequisite

There are no graduate course prerequisites.

Course Objectives

As the course instructor, I have several goals that I hope each of you will be able to accomplish during the course of this semester:

1. An appreciation of the basic information in cognitive psychology, including research and theory, as well as an understanding of the complexity of cognitive processes.
2. An understanding of research methods in cognitive psychology, together with the ability to evaluate research in this area critically.
3. An ability to apply your knowledge to your own cognitive processes (for example, in studying for exams and in solving problems) and to professional areas such as education, speech pathology, law, clinical psychology, communication, business, and social relations.
4. An ability to write a review of an article on a topic of your choice, related to Cognitive Psychology, that demonstrates an understanding of the research, an ability to synthesize information, and a mastery of writing style.
5. **Important Note:** A distinct objective of this course is to incorporate an "international perspective" as part of learning various relevant concepts. Given the interdisciplinary and empirically-based nature of psychology, it has become increasingly important to demonstrate how current topics may be relevant to understanding human behavior and thinking from a global perspective. Thus, we shall attempt to infuse

such perspective in our understanding of various constructs presented in each chapter and in your final paper. In addition, before the end of the semester, we shall assess the extent in which the strategies used were effective in "internationalizing" the course and to identify other strategies to further achieve this objective.

Course Materials (Required text and other materials):

1. Matlin, M. W. (2013). *Cognition* (8th ed.). NJ: Wiley.
   [ISBN: 978-1-118-148969 for print version OR 978-1-118-545560 for e-text version]

2. Selected articles/readings will be distributed/assigned.

Assignments / Course Requirements

- **Participation (170 points)**
  - *Chapter Presentation(s)* – This is a "team" activity. Make your presentation(s) fun, creative, and informative. Your group will be assigned chapters from the main PSY624 textbook/s to present in class. The assignment of chapters will be done early during the semester. An **outline of your presentation** (which may be in the form of a PowerPoint presentation) must be posted on the appropriate Blackboard discussion forum prior to your in-class presentation. There is no need to submit a written report for this requirement. Your in-class presentation should conform to the following format:
    (i) 40-minute presentation (e.g., chapter summary, video clips, demonstrations, games, and other relevant materials/activities)
    (ii) Implement a strategy that helps provide an "international perspective" of the constructs in your presentation. (See *E-xcellence* handout.)
    (iii) An open forum to allows you to respond to questions from the class and the instructor

    NOTE: Both instructor and other students in class will evaluate chapter presentations. (Instructor will explain this requirement in greater detail.)

  - *Attendance*– For attendance, five (5) points are deducted for each meeting absent. Less points may be deducted if you are late to class. Proof for excused absences is required.

- **Final Paper (180 points)**

  The final paper (an individual project) is an in-depth critique of a journal article (theoretical and/or empirical) on a course-related topic that is of interest to you. The paper should be no longer than 7 pages, single-spaced (or 14 pages double-spaced).

  The article you choose requires your instructor's approval. You can find relevant articles by searching the PsycINFO and/or the PsycArticles database. [Go to http://library.pace.edu to access these databases.] The article should be derived from an academic or professional journal in **psychology** published **within the last 5 years**.

  An APA style formatted paper is preferred. The structure of the paper should be as follows:

  I. Cite the Journal Article
  Example:
  Zhang, Y., Yu, J., & Boland, J. (2010). Semantics does not need a processing license from syntax in reading Chinese. *Journal of Experimental Psychology: Learning, Memory, and Cognition, 36,* 765-781.

  II. Summary of the Journal Article *[no longer than one (1) page, single-spaced]*

III. Critique/Review *[approximately 5 pages]*

This is primarily opinion-based, but you are also expected to demonstrate your knowledge of cognitive psychology by using the concepts and terms covered in the course. Citing references is encouraged but not required.

IV. Implications for International Psychology *[approximately 1 page]*

Answer these questions:

A. What may be the potential relevance of this article on the internationalization of Cognitive Psychology?

B. If this study was done (or to be done) in another country/nation, to what extent do you think the findings or the basic ideas of the article apply to other cultures/nations? Explain why.

This course requirement is intended to supplement your learning of the course content and to enhance your ability to apply the concepts learned.

You will be given the opportunity to have your written critique read by other members of the class sometime during the latter part of the semester. Thus, your paper will be accessible online for other students to evaluate using the Student Grade Form. (This form is available on our course's Blackboard site). Other students in the course, including your instructor, will then provide feedback/comments to your paper. Details about this requirement will be discussed in the course of the semester.

An Individual Member Evaluation form must also be submitted. (This form is available on our course's Blackboard site). This will allow you to evaluate yourself given your perceived quality and/or effort you place in doing the paper.

A Final Paper Presentation Session (in-class) is scheduled during the latter part of the semester. You will be given the opportunity to orally present your paper. The length of the presentation may vary depending on the number of student groups scheduled to present during the day(s) of presentation.

- **Exams (150 points)**

  There will be a Midterm and a Final Exam. This exam will mostly contain multiple-choice questions plus 1 - 2 essay questions. A review sheet will be provided about a week prior to the scheduled exam.

Grading System

Course Requirements	**Points**
Participation = 170 points (34%)	
Chapter Presentation(s):	
Feedback from Class (grades are averaged)	40
Feedback from Instructor (grades are averaged)	60
Individual Member Evaluation	20
Attendance	50
Final Paper = 180 points (36%)	
Instructor Evaluation	80
Individual Member Evaluation (grades are averaged)	20
Student Grade Form (grades are averaged)	40
Submission of Student Grade Form	10
Paper Presentation Session (In-class)	30
Exams = 150 points (30%)	
Midterm (15%)	75
Final (15%)	75
Total points	**500**

Letter-Grade Equivalent
("strictly" followed)

A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities

The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Pace University Writing Center

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). Please refer to the Writing Center's website for information about polices and hours of operation.

SCHEDULE

Note: Read the assigned chapter/s and other assigned readings before the scheduled presentation date.

WEEK	TOPIC/s	READING/s
1 *(01/29)*	What's PSY624 all about? Class Roster Information How may we "internationalize" this course? (Distribute *E-xcellence* article.) (Show Survey to assess an "Internationalized" psychology course.)	Syllabus; Additional handouts

PSYCHOLOGY 625

Personality Theories

(CRN #20568)
(Spring 2011)

Instructor:	Richard Velayo, Ph.D.
Meetings:	Wednesdays, 5:30pm - 8:15pm, Room E101 (Birnbaum Electronic Classroom)
Office Hours:	M, W 3:15pm - 5:15pm (by appointment)
Office Location:	Psychology Dept., 41 Park Row, Rm. 1324, New York, NY 10038
Office Phone:	(212) 346-1558
Credits:	3
Course URL:	http://blackboard.pace.edu/
E-mail:	rvelayo@pace.edu

Course Description

This graduate-level course provides an overview of current thinking and research about personality. Personality psychology includes topics such as the major personality theories (psychoanalytic, phenomenological, trait, biological, behavioristic, cognitive, and social-cognitive), and other relevant factors (interpersonal, contextual, and developmental, and assessment). This course will give you an appreciation of research and theory in personality psychology, an understanding of the methods used to gather and evaluate evidence about personality constructs, and an understanding of the ways in which knowledge of these constructs has been applied to various settings. Though this course requires a fairly sophisticated background in psychology, it includes a basic overview of personality theory. Discussion of key research on personality theories and research is covered.

The content material covered in this course will require your active reading of the assigned materials (i.e., textbook chapters, assigned articles) and your regular class participation. You will also be required to write an in-depth written critique of an article that is of interest to you. In addition, there is a Midterm exam and a Final exam based on the concepts covered in the textbook and on the application of the key concepts covered.

Blackboard, a distance learning software program, will be utilized to supplement regular classroom meetings.

Prerequisite

There are no graduate course prerequisites.

Course Objectives

As the course instructor, I have several goals that I hope each of you will be able to accomplish during the course of this semester:

1. An appreciation of current psychological approaches to theorizing about personality.
2. An understanding of research methods in personality psychology, together with the ability to evaluate research in this area critically.
3. An ability to apply independent, creative, and critical thinking of personality constructs to everyday life and in relevant professions.
4. An ability to write a review of an article on a topic of your choice, related to Personality Psychology, that demonstrates an understanding of the research, an ability to synthesize information, and a mastery of writing style.

5. **Important Note:** A distinct objective of this course is to incorporate an "international perspective" as part of learning various relevant concepts. Given the interdisciplinary and empirically-based nature of

psychology, it has become increasingly important to demonstrate how current topics may be relevant to understanding human behavior and thinking from a global perspective. Thus, we shall infuse such perspective in our understanding of various constructs presented in each chapter and in your final paper. In addition, before the end of the semester, we shall assess the extent in which the strategies used were effective in "internationalizing" the course and to identify other strategies to further achieve this objective.

Course Materials (Required text and other materials):

1. Cervone, D. & Pervin, L. (2010). *Personality: Theory and Research* (11th Ed). NJ: Wiley. [ISBN 978-0-470-48506-4]

2. Selected articles/readings will be distributed/assigned.

Assignments / Course Requirements

- **Participation (170 points)**
  - *Chapter Presentation(s)* – This is a group activity. Make your presentation(s) fun, creative, and informative. Your group will be assigned chapters from the main PSY624 textbook/s to present in class. The assignment of chapters will be done early during the semester. An **outline of your presentation** (which may be in the form of a PowerPoint presentation) must be posted on the appropriate Blackboard discussion forum prior to your in-class presentation. There is no need to submit a written report for this requirement. Your in-class presentation (which may be videotaped) should be about 30 minutes AND should conform to the following format:
    (i) 30-minute presentation (i.e., chapter summary, video clips, and other relevant materials/activities)
    (ii) Implement a strategy that helps provide an "international perspective" of the constructs in your presentation. (See *E-xcellence* handout.)
    (iii) An open forum to allow you to respond to questions from the class and the instructor

  - *Attendance / Participation* – Five (5) points are deducted for each meeting absent or late. Proof for excused absences is required. Included in this grading is the completion of a presentation feedback form to be completed each class meeting by all students who are not assigned to present a chapter for that class session. (Instructor will explain this requirement in greater detail.)

- **Final Paper (180 points)**

  You are required to write an in-depth critique paper (no longer than 7 pages, single-spaced) of a journal article (theoretical and/or empirical studies) on a course-related topic, which is of interest to you. Your choice of a journal article requires your instructor's approval. You can find relevant articles by searching the PsycINFO and/or the PsycArticles database. [For questions or assistance on accessing the Pace University Library Resources, go to http://library.pace.edu]

  Your final paper should be a review or critique of an academic or professional journal article in psychology published within the last 5 years. The structure of the paper should be as follows:

  I. Cite the Journal Article
  Example: Walker, B. M., & Winter, D. A. (2007). The elaboration of personal construct psychology. *Annual Review of Psychology, 58*, 453-477.

  II. Summary of the Journal Article [no longer than two (2) pages, single-spaced]

  III. Critique/Review [This is primarily opinion-based, but you are also expected to demonstrate your knowledge of personality psychology by using the concepts and terms covered in the course.

Citing references is encouraged but not required.]

IV. Implications for International Psychology [What may be the potential relevance of this article on the internationalization of Personality Psychology? Briefly discuss the extent to which the constructs and/or findings in the article apply to other cultures/nations.]

This course requirement is intended to supplement your learning of the course content and to enhance your ability to apply the concepts learned.

You will be given the opportunity to have your written critique read by other members of the class sometime during the latter part of the semester. Thus, your paper will be accessible online for other students to evaluate using the Student Grade Form. (This form is available on our course's Blackboard site). Other students in the course, including your instructor, will then provide feedback/comments to your paper. Details about this requirement will be discussed in the course of the semester.

An Individual Member Evaluation form must also be submitted. (This form is available on our course's Blackboard site). This will allow you to evaluate yourself given your perceived quality and/or effort you place in doing the paper.

A Final Paper Presentation Session is scheduled during the latter part of the semester. You will be given the opportunity to present your paper in class for no longer than ten (10) minutes. (This amount time of time may vary depending on the number of students scheduled to present during the day of presentation).

- **Exams (150 points)**

  There will be a Midterm and a Final Exam. This exam will mostly contain multiple-choice questions plus 2 – 3 essay questions. A review sheet will be provided about a week prior to the scheduled exam.

Grading System

Course Requirements	**Points**
Participation = 170 points (34%)	
Chapter Presentation(s):	
Feedback from Class (grades are averaged)	40
Feedback from Instructor (grades are averaged)	60
Individual Member Evaluation	20
Attendance	50
Final Paper = 180 points (36%)	
Instructor Evaluation	80
Individual Member Evaluation (grades are averaged)	20
Student Grade Form (grades are averaged)	40
Submission of Student Grade Form	10
Paper Presentation Session (In-class)	30
Exams = 150 points (30%)	
Midterm (15%)	75
Final (15%)	75
Total points	**500**

Letter-Grade Equivalent

(will be "strictly" followed)

A	475-500	C+	350-374
A-	450-474	C	325-349

B	400-424	D	275-299
B-	375-399	F	below 275

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities

The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Pace University Writing Center

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). Please refer to the Writing Center's website for information about polices and hours of operation.

SCHEDULE

Note: Read the assigned chapter/s and other assigned readings before the scheduled presentation date.

WEEK	TOPIC/s	READING/s
1 *(01/24)*	What's PSY625 all about? Class Roster Information How may we "internationalize" this course? (Distribute *E-xcellence* article.) (Show Survey to assess an "Internationalized" psychology course.)	Syllabus; Additional handouts
2 *(01/31)*	Personality Theory: From Everyday Observations to Systematic Theories	Ch. 1
3 *(02/07)*	The Scientific Study of People	Ch. 2
4 *(02/14)*	A Psychodynamic Theory: Freud's Psychoanalytic Theory of Personality Freud's Psychoanalytic Theory: Applications, Related Theoretical Conceptions, and Contemporary Research	Ch. 3 Ch. 4
(02/21)	*NO CLASSES (President's Day)*	
5 *(02/28)*	A Phenomenological Theory: Carl Roger's Person-Centered Theory of Personality Roger's Phenomenological Theory: Applications, Related Theoretical Conceptions, and Contemporary Research	Ch. 5 Ch. 6
6 *(03/07)*	Trait Theories of Personality: Allport, Eyesenck, and Cattell Trait Theory: The Five-Factor Model; Applications and Evaluation of Trait Approaches to Personality **Due: TOPIC for FINAL PAPER** (NOTE: The article that will be critiqued must be submitted to the instructor for approval.)	Ch. 7 Ch. 8
03/14	*NO CLASSES (Spring Break)*	
7 *(03/21)*	**MIDTERM EXAM on Chapters 1 - 8**	
8 *(03/28)*	Biological Foundations of Personality	Ch. 9
9 *(04/04)*	Behaviorism and the Learning Approaches to Personality	Ch. 10

10 *(04/11)*	A Cognitive Theory: George A. Kelly's Personal Construct Theory of Personality	Ch. 11
04/18	*NO CLASSES (Passover Eve, No Evening Classes)*	
11 *(04/25)*	Social-Cognitive Theory: Bandura and Mischel Social-Cognitive Theory: Applications, Related Theoretical Conceptions, and Contemporary Research	Ch. 12 Ch. 13
12 *(05/02)*	Personality in Context: Interpersonal Relations, Culture, and Development Across the Course of Life Assessing Personality Theory and Research **Due: FINAL PAPER + Individual Member Evaluation**	Ch. 14 Ch. 15
13 *(05/09)*	**FINAL PAPER PRESENTATIONS (In-class)**	
14 *(05/11) (Wed.)*	**FINAL EXAM on Chapters 9 -15** **Due: Student Grade Form** (for Final Paper)	

**Assigned supplementary articles/readings will be assigned for each chapter.*

PSYCHOLOGY 695 – INDEPENDENT STUDY (MA in Psychology)

Instructions:

1. Select a relatively specific topic/project you are interested in and that is feasible to do conduct a research on. The supervising faculty must approve your chosen topic/project.

2. Survey and gather the relevant research on the topic. Most of the related articles should be recent and published in psychological literature/journals.

3. Summarize the research trends on the topic and cite your references.

4. Provide at least three suggestions for future research based on your paper that may be pursued based on the research literature you have surveyed.

Independent Study: Literature Review and/or other written/tangible project

Due Date for PAPER: 5/09/16 (Monday)

General Format and Style: APA Style; must be typed and double-spaced

GRADING SYSTEM

		Points
Paper*		
Title Page	10	
Introduction (1 paragraph)	20	
Summary of research trends (based on at least 15 articles)	100	
3 Suggestions for further research	30	
References (Only articles cited in the research paper should be included in this list); (List at least 15 references)	20	
Overall Quality	20	**200**
Weekly Updates / Meetings / Consultations (15 pts. /week) [Note: Grades for this requirement is based on written updates sent by email (10 pts/wk) and attendance at weekly research meetings (5 pts/wk)]		**200**
Conference Presentation [Venue to be determined by your instructor]		**100**
TOTAL POINTS		**500**

**Note: Approximate length of paper: 10-15 pages, excluding references section*

B	400-424	D	275-299
B-	375-399	F	below 275

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities

The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Request for an Accommodation

To request an accommodation for a qualifying disability, a student must self-identify and register with the Office of Disability Services for his or her campus. The Office of Disability Services is housed in the Counseling Center on both the New York City and Pleasantville campuses. The Coordinator of Disability Services for the New York City campus may be contacted at 212-346-1526 or 156 William Street, 8th Floor. The Coordinator of Disability Services for the Westchester campuses may be contacted at 914-773-3710 or the Administration Center at 861 Bedford Road, Pleasantville. Notifying other University offices, faculty or staff does not constitute giving notice to the University of a request for an accommodation. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student.

It is the student's responsibility to request an accommodation. Because some accommodations may take considerable time to arrange, students are urged to contact the Coordinator of Disability Services in order to request an accommodation as soon as possible after receiving notice of admission to the University. Untimely requests may result in delay, substitution, or an inability to provide an accommodation. If a request for an accommodation is submitted late, the Coordinator of Disability Services will, nevertheless, make every reasonable effort to process the request for an accommodation.

Before an accommodation will be provided, the student may be required to submit medical and/or other diagnostic information concerning the student's impairments and limitations. If the information provided is unclear or incomplete, the student may be required to provide additionalinformation or participate in further evaluations.

The Coordinator of Disability Services will, in conjunction with others as may be appropriate, evaluate the information provided by the student and health care providers; refer the student for additional testing and evaluation as may be necessary; make recommendations for the accommodations to be provided to the student; and, assist in arranging for the implementation of the accommodation to be provided.

If a student experiences difficulties with the implementation of the accommodation or, if after it has been implemented, a student has concerns that the expected results of the accommodation are not being met, the student

must promptly notify the Coordinator of Disability Services. The Coordinator of Disability Services will, as may be appropriate, endeavor to remedy the situation.

If a student disagrees with the accommodation recommended by the Coordinator of Disability Services, he or she should promptly appeal the recommendation to the Interim Director for Compliance at 914-923-2892.

Faculty members who have concerns about a reasonable accommodation recommended by the Coordinator for Disability Services for his or her class, should contact the Coordinator on the appropriate campus.

Depending on the nature of the disability and the accommodation provided, a student may be required periodically to submit medical and/or diagnostic information demonstrating the current status of the disability and/or to renew the request for an accommodation.

Any questions about the services offered by the University to students with disabilities or the procedures for requesting an accommodation should be directed to the Coordinator of Disability Services for the New York City campus at 212-346-1526 or for the Westchester campuses at 914-773-3710.

Pace University Writing Center

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). PSYCHOLOGY 698

Professional Seminar

(CRN #73454)
(Fall 2016)

INSTRUCTOR:

Richard S. Velayo, Ph.D.
Email: rvelayo@pace.edu
Phone: 212-346-1558
41 Park Row, 13th floor, Room 1308
Office Hours: Wednesday, 1:00pm – 3:30pm (by appointment)

Class Meetings: Dates: Wednesdays (See class meeting schedule on page 3 of this syllabus.)
Times: 11:00am – 12:20pm
Location: Psychology Dept. Conference Room (Room 1321)

Course Description and Objectives

The purpose of this non-credit bearing course developed for students in the MA in Psychology program is to develop skills for life-long learning and professionalism. Important criteria by which Graduate Programs are assessed for their effectiveness in preparing young professionals is life-long learning and skills that including professional networking, mentorship, and professionalism.

Students will meet at designated days/times during the semester. Activities planned for this time throughout the year will include colloquia, professional discussion of "real world" issues, and any other professional activities deemed appropriate and necessary. These activities may be formal (such as colloquia) or informal such as a brown bag lunch to discuss an area of professional interest with students and faculty (e.g., licensure). In addition, each student will have two individualized consultation sessions with the instructor: (1) an advising session to discuss each student's educational and/or career goals, and (2) a feedback session to discuss each student's professional portfolio.

Learning Outcomes

This course is offered every semester to benefit students in the MA in Psychology Program. It provides a venue for students to learn and be updated on relevant and current information about the field, and help them realize how the MA in Psychology program may address their own professional goals as they go through the program. Students should therefore:

- Be able to have sufficient knowledge about contemporary real world issues that face the field of psychology.
- Perceive their education in the program as providing them with relevant life-long learning and skills that including professional networking, mentorship, and professionalism.
- Be prepared to determine what area of psychology, a related field, or professional/academic area to pursue in the context of the general psychology masters program.
- Be prepared to discuss an area of professional and/or research interest.

Prerequisite

There are no graduate course prerequisites.

Course Materials

Relevant resource materials may be disseminated to students during each seminar/meeting and/or posted on the Blackboard site dedicated for this course.

Course Requirements

Matriculated full-time students in the MA in Psychology program are required to enroll in the Professional Seminar for each fall and spring semesters in which they are enrolled in the program. (Note: The MA program is designed to be completed in two years – Fall 1, Spring 1, Fall 2, and Spring 2 semesters). For students who plan to complete the program in less than two years, those students must register for the Professional Seminar during each fall and spring semesters they are matriculated in the program.

Matriculated part-time students in the MA in Psychology program should take this course for at least 4 semesters (Fall/Spring). It is strongly advised that all part-time students take this course in their first semester that they have matriculated into the program and in their last semester prior to graduation.

1. Attendance/participation at scheduled classes
   - Make up for a maximum of three missed meetings per semester is possible by writing an additional reaction paper for each missed meeting.

2. Attendance in at least two (2) instructor-approved events (colloquia, seminars, lectures, talks related to Psychology, either at Pace or anywhere else).
   - Your instructors will inform you of which events are approved. You may also propose events, which require the approval by your instructor/s. Approval of such events is based on the discretion of your instructor.
   - Students will write no more than a 1-page reaction for each of the two "events" attended. One paragraph summarizing the topic and another paragraph summarizing what you thought of the event and what you learned from it.
     [IMPORTANT: You need to indicate the source (e.g., URL) and/or title/date/time of the event.]
   - You may write your Reaction Papers on any event or activity posted on Blackboard (e.g., Psy.D. doctoral project presentations, colloquia/talks sponsored by the Psychology Department). In addition, if there are Psychology-related talks/events around town that you may be interested in attending, you may write your reaction paper on those events. If you attend any regional conferences (e.g., Eastern Psychological Association) or national (e.g., American Psychological Association) or international conferences (International Council of Behavioral Medicine), you may base these reaction papers on DIFFERENT events at the conference.

3. Development/Updates on Your Professional Portfolio which includes:
   - A personal (narrative) statement of previous experiences as well as personal/educational/professional goals related to the degree being pursued OR a cover letter for a job.
   - Updated Curriculum Vitae / Resume

   [NOTE: You may also include other relevant supplemental materials such as syllabi of all classes taken, assignments at classes, record of any professional publications or presentations, etc.]

4. Two (2) one-on-one consultation sessions with your instructor during the semester. (You and your instructor will coordinate the dates/times to meet.)
   - Advising session on your educational and/or career goals
   - Feedback session on your Professional Portfolio

Grading System

Pass (P) or Fail (F) as determined by compliance with course requirements specified above.

SCHEDULE

NOTE: For each semester of PSY698, there will be a different "Featured Discussion Topic". Students are encouraged to suggest other topics that may be of interest for discussion.

Meeting	DISCUSSION TOPIC/s
1 *(09/14)*	**What is this course about?** **Traditional and Alternative Career Paths in Psychology;** **Building your Portfolio** Featured Discussion Topic: *Graduate course grades, GRE scores, and recommendations letters.*
2 *(09/28)*	**The Relevance of Joining Psychology Organizations;** **Academic Integrity, Professionalism, Collegiality, & Diversity;** **Time Management** Featured Discussion Topic: *Plagiarism: What is it and how can you avoid committing it?*
3 *(10/19)*	*What you need to know about…* **RESEARCH in Psychology** Featured Discussion Topic: *Mentored Lab and Independent Study*
4 *(11/02)*	*What you need to know about…* **PROFESSIONAL PRACTICE in Psychology** Featured Discussion Topic: *Internships, Practicum, and other field-based opportunities*
5 *(11/16)*	*What you need to know about…* **TEACHING in Psychology** Recommended Discussion: *Strategies for Improving Public Speaking Skills*
6 *(12/07)*	**Strategies for Applying to Doctoral Programs** **Strategies in Applying for Jobs** **Your Portfolio (Revisited)** Featured Discussion Topic: *Your Cover Letter and/or Personal Statement*

7 *(12/21)*	**NO CLASS MEETING** **DUE: Your Portfolio (Updates)** **DUE: Two (2) Reaction Papers**

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities

The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Request for an Accommodation

To request an accommodation for a qualifying disability, a student must self-identify and register with the Office of Disability Services for his or her campus. The Office of Disability Services is housed in the Counseling Center on both the New York City and Pleasantville campuses. The Coordinator of Disability Services for the New York City campus may be contacted at 212-346-1526 or 156 William Street, 8th Floor. The Coordinator of Disability Services for the Westchester campuses may be contacted at 914-773-3710 or the Administration Center at 861 Bedford Road, Pleasantville. Notifying other University offices, faculty or staff does not constitute giving notice to the University of a request for an accommodation. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student.

It is the student's responsibility to request an accommodation. Because some accommodations may take considerable time to arrange, students are urged to contact the Coordinator of Disability Services in order to request an accommodation as soon as possible after receiving notice of admission to the University. Untimely requests may result in delay, substitution, or an inability to provide an accommodation. If a request for an accommodation is submitted late, the Coordinator of Disability Services will, nevertheless, make every reasonable effort to process the request for an accommodation.

Before an accommodation will be provided, the student may be required to submit medical and/or other diagnostic information concerning the student's impairments and limitations. If the information provided is unclear or incomplete, the student may be required to provide additionalinformation or participate in further evaluations.

The Coordinator of Disability Services will, in conjunction with others as may be appropriate, evaluate the information provided by the student and health care providers; refer the student for additional testing and evaluation as may be necessary; make recommendations for the accommodations to be provided to the student; and, assist in arranging for the implementation of the accommodation to be provided.

If a student experiences difficulties with the implementation of the accommodation or, if after it has been implemented, a student has concerns that the expected results of the accommodation are not being met, the student must promptly notify the Coordinator of Disability Services. The Coordinator of Disability Services will, as may be appropriate, endeavor to remedy the situation.

If a student disagrees with the accommodation recommended by the Coordinator of Disability Services, he or she should promptly appeal the recommendation to the Interim Director for Compliance at 914-923-2892.

Faculty members who have concerns about a reasonable accommodation recommended by the Coordinator for Disability Services for his or her class, should contact the Coordinator on the appropriate campus.

Depending on the nature of the disability and the accommodation provided, a student may be required periodically to submit medical and/or diagnostic information demonstrating the current status of the disability and/or to renew the request for an accommodation.

Any questions about the services offered by the University to students with disabilities or the procedures for requesting an accommodation should be directed to the Coordinator of Disability Services for the New York City campus at 212-346-1526 or for the Westchester campuses at 914-773-3710.

Pace University Writing Center

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). REQUIREMENTS FOR THE M.A. THESIS
MA in Psychology Program
Psychology Department

PSY699 – M.A. THESIS
3 credits

Current Catalogue Description
Prerequisite: Department approval required.
Course Description: With the approval of the appropriate faculty member and coordinator of the M.A. program or Department Chairperson, students may conduct an original research project with the supervision of a faculty member. The student meets and regularly consults with the faculty member to provide guidance and to review progress on the research project. A research paper must be submitted upon completion of the course.
Course Rotation: TBA.

Proposed Requirements:

- Prerequisite Course/s: Research Design and Statistics I (PSY615) AND Research Design and Statistics (PSY616) NOTE: PSY616 may be taken concurrently with PSY699.

- Approval to take this course must be obtained from at least two full-time faculty members of the MA Committee. The necessary approval forms must be signed by the student's thesis advisor prior to initiation and completion of the project.

- Students must have a thesis advisor [i.e., a f/t Pace Psychology faculty (NYC campus) faculty who is responsible for the supervision of the student's thesis]. The student is expected to have regular consultations with the advisor.

- The MA thesis must be written in APA style format.

- The MA thesis should an empirical study and involves the completion of a paper for publication consideration to a psychology journal (or a journal in a related field as deemed appropriate by the thesis advisor).

- The MA thesis must be presented at a conference (e.g., Pace Psychology Conference) OR to at least two full-time faculty (including the thesis advisor) of the Psychology Department sometime before the end of the semester.

- A "K" grade may be given to a student until the all the necessary requirements associated with the thesis are completed.

- The MA Thesis will be archived and made available on the MA in Psychology (NYC) Blackboard site.

-End-

MA Thesis

General Format and Style

Typed and double-spaced
APA Style (Refer to APA Publications Manual)

Organization and Descriptions of Sections of the Proposal

TITLE PAGE

This will serve as the first page of your proposal. (Refer to the APA Publication manual.)

ABSTRACT

This section is a summary of your proposal. (Limit: 100 words)

INTRODUCTION

(The general goal of this section is to present the theoretical and empirical scientific literature justifying the proposed study, culminating in a statement of the purpose of the study and specific hypotheses.)

Overview

This section is a general introduction orienting the reader to the rationale and purpose underlying the proposed research study.

Literature Review

This section contains presents the relevant research literature, which may include a conceptual or theoretical framework underlying the development of your research. The review should be organized from general to specific -- presenting research covering broad theoretical issues pertinent to your proposed project, moving to research more specific to your study, culminating in a description of the specific study of studies upon which your project is built. This review should lead logically to your statement of purpose and hypotheses. Add a summary/ concluding paragraph at the end of this section.

Significance of the Study

Write a paragraph pointing out the relevance of this study as it pertains to its theoretical or practical significance or both. In other words, how would this research contribute to psychological knowledge and its application/s to the real world.

Statement of Purpose

This section should contain a specific statement, based on the cited literature, of the justification for your proposed project, complete with an outline of the project itself.

Hypotheses

This section is a formal set of statements of specific hypotheses, clearly articulated and logically derived from the literature you have cited.

METHOD

(The general goal of this chapter is to describe the methodology to be used in the study with such clarity that the reader could replicate your study.)

Participants

This section contains a relatively complete description of the participants in the study, including (a) the rationale for the type of population that will be used, (b) sample size considerations, and (c) sampling plan.

Experimental Design

This section specifies the experimental design of your study, identifies and operationally defines the independent and dependent variables. A visual representation of your design that shows the distribution of participants to each condition in your study is a good supplement to this section.

Materials

This section should contain complete descriptions of all research materials (i.e., stimuli, equipment, scales) to be used in the study. Included in this section are (a) the rationale for the choice of independent and dependent variables, as well as their operational definitions, and (b) description of all measurement instruments (e.g., questionnaires, apparatus). If you are going to develop a specific instrument, you must describe it in detail, including an assessment of its reliability and validity. All materials, letters of consent, scales, and others must be placed in appendices.

Procedure

All relevant instructions to participants need to be documented, including how informed consent will be obtained. All details concerning the experimental design of the proposed study (e.g., manipulation of the independent variables, use of control features, counterbalancing) must be spelled out.

RESULTS

The general goal of this section is to present appropriate statistical analyses to be used in the evaluation of your research hypotheses. It is important that each statistical procedure to be used be clearly linked to the appropriate hypothesis. This section should present the relevant descriptive (e.g., means and standard deviations) and inferential statistics (e.g., ANOVAs, t-tests, paired comparisons tests, regression analysis) pertaining

to your hypotheses. Link each statistical result to a specific hypothesis and present any theoretically interesting results that go beyond the hypotheses tested.

DISCUSSION

The general goal of this section is to discuss the theoretical and practical implications of the results of your research. It is also strongly suggested that you do the following: a) summarize key findings of your study and the probable explanations for these, b) relate your findings based on the previous literature you had reviewed, c) indicate the key limitations of the study that may have contributed to the results, and d) suggest what future research on your topic should focus on.

REFERENCES
(Minimum of 15 articles required)

All relevant research literature cited within the research proposal should be included in the reference list. Make sure you follow proper APA style format.

APPENDICES

All stimulus materials, letters of consent, detailed descriptions of psychological instruments, raw data, coding guide, data sheets, etc. should be included in separate appendices.

- End -

Pace University
PSY 717: The Psychology of Learning: Theory and Applications

Fall 2012
Wednesdays 1:00-3:40p.m.
Instructor: Richard Velayo, Ph.D.

Instructor Information:
Office Hours: M 12:00-3:00p.m., W 4:00-5:00p.m., & F 12:00-3:00
(by appointment)
Phone: 212-346-1506 or 212-346-1801
Email: ayasik@pace.edu

Prerequisite: Undergraduate Learning Theory course.

Course Description

This course is intended to provide students with information regarding major theories of learning (e.g., social-cognitive; cognitive developmental; information-processing; behavioral). The first half of the course will focus on basic principles of behavior modification and its application to educational instruction and psychological intervention. The second half of this course will present the basic principles of various learning theories. Consideration will be given to how the principles discussed relate to effective teaching and learning.

Course Objectives

1. Students will demonstrate an understanding of basic behavioral principles.
2. Students will demonstrate an understanding of behavioral observation techniques including recording procedures and interpretation of data.
3. Students will demonstrate the ability to conduct a functional behavioral assessment.
4. Students will demonstrate an understanding of methods to increase and reduce various behaviors.
5. Students will demonstrate the ability to devise behavior modification plans.
6. Students will demonstrate an understanding of data analytic procedures to determine the efficacy of behavioral treatments.
7. Students will gain knowledge of behavioral techniques applied in the classroom as well as in clinical settings.
8. Students will demonstrate an understanding of ethical issues related to the use of behavioral techniques.
9. Students will demonstrate an understanding of basic theoretical concepts of various learning theories.
10. Students will demonstrate an understanding of key components of information processing theory and it's relation to classroom instruction.
11. Students will demonstrate an understanding of developmental changes in information-processing and it's relation to classroom instruction.
12. Students will demonstrate an ability to critically analyze current research related to learning and/or instructional techniques.

Student attainment of these objectives will be assessed through class examinations, student research papers, and student behavior modification plans.

Course Requirements:

1. **Participation**. Students are expected to have completed assigned readings before coming to class. Students should be prepared to discuss and respond to questions about the readings.

2. **Research Paper & Presentation** (30% of course grade). Each student is required to prepare a 10-15 page double-spaced paper that focuses on a research topic related to educational psychology (e.g., expert vs novice teachers, achievement motivation, instructional approaches). Specifically, each student will review research related to the chosen topic. The topic and references will be discussed and agreed upon by the instructor. The following outline should be followed:
   a. Introduction (topic explained, importance discussed)
   b. Review of relevant research
   c. Conclusions and implications for school-clinical child psychology.
   d. References (in current APA style)

   The following due dates apply to the research paper requirement:

   9/19/12 Topic/research question (Include: tentative title and one paragraph summarizing topic area)(Posted to blackboard)
   10/17/12 Review of one journal article (Include: complete reference in APA style and a copy of the article)(Posted to blackboard)
   11/14/12 First draft or outline of paper (Posted to blackboard)
   12/12/12 Final paper (Posted to blackboard AND double-sided hard copy to instructor)

   In addition, each student will prepare a 15-minute, in-class presentation that summarizes the key findings of their research paper. The presentation will be factored into the final grade for the research paper. The dates for in-class presentations are **12/05/12, 12/12/12,** and **12/19/12.**

3. **Behavior Modification Paper** (30% of course grade). Each student is required to prepare a 10 page double-spaced paper that involves planning, applying, and evaluating a behavior modification treatment program. Students should follow the guidelines presented in Chapter 24 of Martin and Pear (2011). Topics for this paper need to be approved by the course instructor. Published research results denoting the efficacy of the chosen behavioral treatment should be presented.

   The following due dates apply to the behavior modification paper requirement:

   10/03/12 Topic & Assessment Proposal (Include: operational definition of behavior to be modified and a one to two page description of the assessment methods to be utilized). [Posted to blackboard AND hard copy submitted to instructor)]
   10/17/12 Intervention Proposal (Include a one to two page description of behavioral techniques you will be implementing) [Posted to blackboard AND hard copy submitted to instructor]
   12/12/12 Final draft of paper (Posted to blackboard AND hard copy submitted to instructor)

4. **Exam** (40% of course grade). A final cumulative examination will be given on **November 28, 2012**. The format of the exam will be a combination of multiple choice, definitions, short answer, and/or essay questions. The exam will cover

materials discussed in class as well as materials from readings. Please note that questions will be both theoretical and applied. A list of exam objectives will be distributed prior to the exam.

Required Texts:

Martin, G., & Pear, J. (2011). *Behavior modification: What it is and how to do it* (9th ed.). Upper Saddle River, NJ: Prentice-Hall.

Required Readings:

Additional articles &/or chapters will be assigned throughout the course of the semester. Students are responsible for all reading materials assigned even if the material is not formally discussed in class. Articles and chapters other than from required texts are available on E-reserve from the Pace University Library.

Recommended:

American Psychological Association. (2010). *Publication manual of the American Psychological Association* (6th ed.). Washington, DC: Author.

Policy regarding Assignments and Exams:

All written assignments are to be type-written. Handwritten assignments will not be accepted. Furthermore, late assignments will not be accepted unless due to unavoidable circumstances which have been discussed with the instructor. Assignments, supplementary readings, and changes to this syllabus will be announced in class. Students are responsible for these changes.

All papers should follow the American Psychological Association (APA) style as presented in the *Publication Manual of the American Psychological Association* (6th ed.). Students at this level of training are expected to utilize primary sources from peer-reviewed publications as their main type of references. Use of secondary sources (e.g., book chapters) should be limited.

Make-up exams will be given only for excused absences (e.g., medical excuses) and are at the discretion of the instructor. Please note that any make-up exam will differ from the exam given during the regularly scheduled class period. It is the student's responsibility to contact the professor to make such arrangements prior to the date of the in-class exam.

Students with Disabilities

If you have a disability for which you are or may be requesting an academic accommodation, you must register with the Coordinator of Services for Students with Disabilities. You can contact the Coordinator at 212-346-1526.

Course Outline:

Date	Topics	Readings[1]
9/5	Course Introduction Historical overview of Behavioral Theories	Martin & Pear Chap. 29
9/12	Behavior Modification Approach Behavioral Assessment	Martin & Pear, Chaps. 1, 2, & 20-22 Gresham et al. (2001) Ervin, Ehrhardt, et al. (2001) Ervin, Radford, et al. (2001) Sterling-Turner et al. (2001)
9/19	Behavioral Intervention Plans Positive reinforcement, extinction & punishment **(Research Paper: Topic Due)**	Martin & Pear, Chaps. 3, 5 & 12 Little & Kelley (1989)
9/26	**No Class**	
10/3	Existing stimulus control & schedules of reinforcement **(Behavior modification topic & assessment proposal due)**	Martin & Pear, Chaps. 6, 7, 17, & 18 Ogier & Hornby (1996)
10/10	Shaping, discrimination, & fading Conditioned reinforcement, chaining, & generalization **(Research Paper: Article review due)**	Martin & Pear, Chaps. 8-10 Meyer et al. (1999)
10/17	Token Economies Behavior Modification Designs Clinical behavior therapy overview & Ethical issues	Martin & Pear, Chaps. 4, 11, 16, 23, 25-28, & 30 **Hargett & Webster (1996)** Drasgow & Yell (2001)
10/24	Socio-cultural Theories of Learning **(Behavior modification intervention proposal due)**	Schunk (2004) Chap. 3 Steiner & Mahn (2003)
10/31	Information Processing Theories & Cognitive Learning Processes	Derry (1990) Leighton & Sternberg (2003) Mayer (2003), Mayer (1996) McCormick (2003) Paris & Winograd (1990)
11/7	Information Processing Theories & Cognitive Learning Processes (cont.)	

[1] Additional readings may be assigned throughout the course of the semester. Students are responsible for all readings unless otherwise specified.

11/14	Motivation & Self-Regulation **(Research Paper: Outline/draft due)**	Pintrich (2003) Ryan et al. (2001) Schunk & Zimmerman (2003) Tollefson (2000)
11/21	**No Class**	
11/28	Final Exam	
12/5	Instructional Issues **Student Research Presentations**	Borko & Shavelson (1990) Dart et al. (1999) Pressley et al. (2003) Slavin et al. (2003)
12/12	**Student Research Presentations** **(Research Paper Final Version Due)** **(Behavior Modification Final Paper Due)**	
12/19	**Student Research Presentations**

PSY834: Doctoral Project Seminar **Spring 2014**
PSY835: Doctoral Colloquium
Blackboard Community Name: Psy.D. Doctoral Projects
[To access, go to http://blackboard.pace.edu and look under "My Organizations".]

INSTRUCTORS

Richard S. Velayo, Ph.D.
Office: 41 Park Row, Rm. 1310
Office Hours: (by appointment)
Telephone: 212-346-1558 (Office)
Email: rvelayo@pace.edu

Lisa Rosenthal, Ph.D.
Office: 41 Park Row, Rm. 1322
Office Hours: (by appointment)
Telephone: 212-346-1784 (Office)
Email: lrosenthal@pace.edu

DESCRIPTION OF COURSES

PSY834 - Doctoral Project Seminar (Psy.D.)
This seminar provides a structured framework for the development of the Psy.D. doctoral project. Quantitative, methodological, and ethical issues relevant to students' research proposals are discussed. Fully developed research proposals are presented to faculty and peers and subjected to rigorous review. Implementation of their proposed research is contingent upon faculty approval.

PSY835 - Doctoral Colloquium (Psy.D.)
This seminar provides a structured framework for the completion of the Psy.D. doctoral project. Issues regarding the statistical analyses and interpretation of research findings are of primary concern for discussion. Research results are presented to faculty and peers and are rigorously critiqued. The completion of the Psy.D. doctoral project is contingent upon faculty approval. Prerequisite: PSY834

[NOTE: Please check the Blackboard Community called "Psy.D. Doctoral Projects" for all procedures, documentation, schedules, research proposals, and results summaries. Sample resources, suggested readings, and weblinks may also be accessed through this online community.

CALENDAR

2/05 *(Wednesday)* 7:30pm – 9:30pm Location: To be determined	**CLASS MEETING #1:** General Overview, Paperwork, and other Course Requirements *(See Note 1 for attendance requirements.)*
2/10 *(Monday)* 7:30pm – 9:30pm Location: To be determined	**CLASS MEETING #2:** General Overview, Paperwork, and other Course Requirements *(See Note 1 for attendance requirements.)*
2/28 *(Friday)*	**DEADLINE:** Submission of materials for students planning to present on 3/14 *(See Note 2 for submission requirements.)*
3/14 *(Friday)*	**PSY.D. PRESENTATIONS:** Psychology Lab & Conference Room
3/24 *(Monday)*	**DEADLINE:** Submission of materials for students planning to present on 4/04 *(See Note 2 for submission requirements.)*
4/04 *(Friday)*	**PSY.D. PRESENTATIONS:** Psychology Lab & Conference Room
4/25 *(Friday)*	**DEADLINE:** Submission of materials for students planning to present on 5/09 *(See Note 2 for submission requirements.)*
5/09 *(Friday)*	**PSY.D. PRESENTATIONS:** Psychology Lab & Conference Room

Note 1
- Psy.D. students who plan to present their PSY834 proposals or PSY835 papers are REQUIRED to attend either *Class Meeting #1* or *Class Meeting #2*, AND to schedule a brief (15 - 20 minute) consultation meeting with Dr. Velayo and/or Dr. Rosenthal *after* having attended one of the class meetings but *before* their presentation. A Psy.D. student may present their proposal (PSY834) or paper (PSY835) in one of the presentation dates ONLY when this attendance requirement is satisfied.
- PSY834 students must also attend at least 3 presentation sessions (excluding their own) on at least one of the Psy.D. presentations dates scheduled for this semester. Attendance will be taken.
- PSY835 students must also attend at least 3 presentation sessions (excluding their own) on the Psy.D. presentation date they are scheduled to present their results. Attendance will be taken.

Note 2
- Two weeks prior to the date you wish to present, the Psy.D. student must submit:
  1) Approval forms signed by your advisor and consultant (needed for both PSY834 and PSY835)
  2) An electronic file (in MS Word format) of your doctoral project proposal (PSY834) or doctoral project paper (PSY835) must be sent as an email attachment to Dr. Velayo at rvelayo@pace.edu.

PSY111
Introduction to Psychology 2
(CRN#40741)
Summer 1 2008

Instructor:	Richard S. Velayo, Ph.D.
Office Location:	41 Park Row, Rm. 1324
Office Phone:	(212) 346-1558
E-mail (preferred):	rvelayo@pace.edu

Credits: 3

Description

An introduction to the science and profession of psychology including coverage of research, cognitive abilities, human development, personality, testing and assessment, abnormal psychology, treatment of psychopathology, health and wellness, personality, abnormal psychology, social cognition, and social influence.
[Note: The Introductory Psychology course sequence (PSY110 and PSY111) introduces students to psychology as a science, a profession, and as a means of promoting human welfare. These courses are required for all Psychology and Applied Psychology and Human Relations majors and are considered Area of Knowledge 5 of Pace's Core Curriculum. All sections of PSY110 and PSY111 use the same textbook and each course covers specific content areas.]

This course, together with PSY110, provides you with an introduction to psychology, the scientific study of behavior and mental processes. (In PSY110, the focus is on the biological aspects of psychology, sensation, perception, learning, memory, cognition and language, consciousness, and motivation and emotion.) In each section we will examine the kinds of questions asked, methods used, and assumptions made by researchers. PSY110 and PSY111 are prerequisites for all advanced courses in psychology.

Many students come to introductory psychology courses more interested in the application of psychology than in its scientific basis. Psychology is relevant to the personal and social issues you confront. Students are expected to be able to connect the basic concepts we examine to their personal experience. An important aim of the course is to assist you in developing the critical thinking skills necessary for dealing with psychological issues, and becoming an informed consumer able to evaluate the many claims about psychology appearing in the media. Students are expected to take an active role in thinking about and questioning the matters addressed in the text and in class.

Prerequisite

There are no prerequisite course/s required.

Course Materials

Required Textbooks:

- **Bernstein, D., Penner, L., Clarke-Stewart, L., & Roy, E., (2006). *Psychology* (7th ed.). Boston, MA: Houghton-Mifflin. [ISBN: 0-61867483-2]**

Note: Books for Pace online courses are available through the Pace Online Bookstores or you may visit an on campus bookstore. To purchase your textbooks online go to http://pace.bncollege.com. You may also purchase the textbook at the Pace campus bookstore:

New York City Barnes & Noble @ Pace University
41 Park Row, New York, NY 10038
(212) 346-1605

Blackboard Resource Center

If you need help with Blackboard, go to: **http://www.pace.edu/blackboardhelp**

Course Topics and Schedule

WEEK	TOPIC	ASSESSMENTS
1 (May 29 – June 4)	***COURSE INTRODUCTION*** ***PSY111 SYLLABUS*** **CHAPTER 1: Introducing Psychology**	
2 (June 5 – June 11)	**CHAPTER 2: Research in Psychology** **CHAPTER 10: Cognitive Abilities**	**TOPIC for FINAL PAPER** **(Due on June 11)**
3 (June 12 – June 18)	**CHAPTER 12: Human Development** **CHAPTER 13: Health, Stress, and Coping**	
4 (June 19 – June 25)	**CHAPTER 14: Personality** **CHAPTER 15: Psychological Disorders**	
5 (June 26 – July 2)	**CHAPTER 16: Treatment of Psychological Disorders** **CHAPTER 17: Social Cognition**	**FINAL PAPER** **(Due on July 2)**
6 (July 3 – July 12)	**CHAPTER 18: Social Influence** ***COURSE Wrap-up and COURSE EVALUATION***	**Final Exam** **(Due/Completed by July 10)** **Student Grade Form for FINAL PAPER** **(Due on July 12)** **Individual Member Evaluation Form for FINAL PAPER** **(Due on July 12)**

Course Documents

Course material is organized into weekly folders located within the **COURSE DOCUMENTS** button of **Blackboard**. On each Thursday, by midday, a new folder will be made available for you to actively read through and comprehend the material. You have an entire week (Thursday through the following Wednesday) to go through the information. Once available, folders will remain active throughout the duration of the course for you to review material on your own.

Assignments

Discussion Board

Participation
As a student in the course, you are expected to ***regularly*** and to ***actively*** participate in all the weekly discussions by responding to each of the questions posted. The quality and frequency of your responses will be taken into account towards your grade. You are also encouraged to provide feedback to other students responses. Discussions are expected to be *insightful, reflective, lively, and thought provoking.*

As for the grading of your weekly participation, you should respond completely and thoroughly to each of the posted question for the week discussion board questions. ***Providing quality feedback to at least 5 of your other classmates and/or instructor postings*** in a way that makes the discussions intellectually stimulating will constitute sufficient participation although you are encouraged to respond to more postings. It will be up to your instructor to determine the quality level of your postings and feedback to determine the appropriate grade for weekly participation in the discussion boards.

These online discussions will focus not only on enhancing your learning of the concepts and applications presented in this course, but also to further your thinking and writing skills.

Facilitation of Discussion Forum
Each week, an assigned student facilitator (or your instructor) will be in charge of developing and posting a few questions to motivate your learning of the course content.

You will be required to facilitate a discussion forum on a topic in one of the chapters from the textbook, including the assigned article for the week. This will involve ***posting questions and/or an interesting activity on or before the first day (Thursday) that your assigned topic is covered***. For example, if you were assigned to facilitate Chapter 2 (Research in Psychology), your set of questions should be posted by Thursday morning. Your goal is to generate a lively online discussion on the chapter topic. Examples of discussion questions that may be posted are:

Imagine that a psychologist asked you to participate in his/her experiment. You were presented with an Informed Consent Form in compliance with ethical guidelines in conducting research with human participants. Why is it important for you to read this form before signing? What information should you expect to read in the form?

There were a number of research methods presented in the textbook. Let presume that a psychologist would like to determine if a new therapeutic approach to depression may work best for a particular client who has recently been diagnosed with depression. Which research method do you think would be best? Why so?

The chapter(s) that you will facilitate is assigned to you early during the semester. Procedurally, you will be asked to send your instructor your questions(s) first via e-mail so that these may be looked over prior to posting. Your instructor may need to modify or make changes so that about 2-4 discussion questions are posted. Your instructor will post these questions for you. As a discussion board facilitator, you are expected to actively respond and provide feedback to your classmates responses, particularly the initial set of responses to the discussion questions for each student. [***Note:*** You are also expected to respond to the questions posted for the week you are assigned to facilitate.]

There is no need to submit a written report for this requirement.

Final Paper (individual project)

You will be required to write an in-depth critique (no longer than 5 pages, single-spaced) of a journal article (theoretical and/or empirical) on a topic covered in the course (based on the textbook) which is of interest

to you. Your choice of a journal article requires your instructor6 approval. You can find relevant articles by searching the PsycINFO and/or PsycArticles database. These contain psychology journals and full-text versions of these articles. [For questions or assistance on accessing the Pace University Library Resources, go to http://library.pace.edu
Your final paper should be a review or critique of an academic or professional journal article in psychology published within the last 5 years. The structure of the paper should be as follows:

I. Cite the Journal Article
Example: Zimbardo, P. G. (2004). Does psychology make a big difference in our lives? *American Psychologist, 59,* 339-351.
II. Summary of the Journal Article (no longer 1 page, single-spaced)
III. Critique/Review [This is primarily opinion-based, but you are also expected to demonstrate your knowledge of general psychology by using the concepts and terms covered in the course/textbook.]

This course requirement is intended to supplement your learning of the course content and to enhance your ability to apply the concepts learned.

You will be given the opportunity to have your paper read by other members of the class sometime during the latter part of the semester. Thus, your paper will be accessible online for other students to evaluate using the **Student Grade Form**. Other students in the course, including your instructor, may then provide feedback/comments to your paper. Details on the specific and technical aspects of this requirement will be discussed in the course of the semester.

An **Individual Member Evaluation Form** must also be submitted. (This form will be made available online). This will allow you to evaluate yourself given your perceived quality and/or effort you placed on doing the paper.

Final Exam

The **Final Exam,** which will be administered online, shall cover all the chapters covered in the course. This is designed to test your knowledge of the material discussed in the assigned readings and to apply what you have learned from the course. The format may include multiple-choice, true-false, and short answer questions.

Communication

Discussion

The **Discussion Board** area has been set up to operate like a live classroom; answer questions, ask questions, comment on the responses of your fellow classmates and instructors. This area can be very valuable to you if you encounter difficulty during the course. Check the Discussion area frequently. Your participation is part of your grade.

If you have personal and on-the-job experience relevant to a discussion topic or to a question from one of your fellow students, please share your knowledge. Active participation by everyone makes the class better for everyone.

Virtual Chat (also called ´ollaboration3accessible under ωCommunication)

This feature is optional. You may use this area to work **synchronously** with your classmates and/or the instructor. This feature in Blackboard may not be used in this course.

Email

Please feel free to contact your instructor or your classmates via **email** at any time.

Grading

Each of the activities below constitutes part of your grade. Failure to participate in one or more activities may result in a significant reduction in your grade.

Final grades are calculated as follows:

Participation (Weekly Discussion Board) *(20 points per chapter; 10 chapters; plus 1 discussion forum)*	44%	220 points
Facilitation of Discussion Forum	12%	60
Final Project:		
Feedback from Class	8%	40
Feedback from Instructor	14%	70
Individual Member Evaluation	4%	20
Submission of Student Grade Form	4%	20
Final Exam	14%	70
Total	**100%**	**500 points**

Note: *One (1) point is subtracted for each day late for each of the related grade associated with a particular course requirement.*

Grading Scale

Note: This will be strictly enforced.

LETTER	POINTS	QUALITY POINTS
A	475 - 500	4.0
A-	450 - 474	3.7
B+	435 - 449	3.3
B	415 - 434	3.0
B-	400 - 414	2.7
C+	380 - 399	2.3
C	350 - 379	2.0
C-	335 - 349	1.7
D+	315 - 334	1.3
D	300 - 314	1.0
F	0 – 299	0.0

Attendance

Successful online learning requires that a you actively participate in each weekó learning materials which include:

- **Reading** course documents, textbooks, articles and web materials assigned.
- **Submission** of homework assignments, projects and papers.
- **Completion** of the course requirements (e.g. exams, written critique paper).

- **Participation** in the weekly discussion board forums, team activities, and email.

Excessive absences and failure to keep up with the course pace may result in a decreased or failing course grade. This is ***not a self-paced course***. Within each week, assignments may be worked on at times convenient to the student. However, the assignments are to be completed by the end of that academic week (Wednesday at midnight). If you are unable to participate during a particular week, please contact the instructor beforehand.

Disabilities

The University¿ commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University¿ web site.

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is plagiarism. It is unethical to present as one¿ own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student¿ responsibility to give credit for any quotation, idea, or data borrowed from an outside source. Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the ˜rades Appeal ProcessM section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students can get help on how to use resources properly in their research and writing from many sources. This site (http://www.pace.edu/library/pages/instruct/plaig.html) provides links to useful information.

Pace University Writing Center

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). Please refer to the Writing Center¿ website for information about polices and hours of operation.

Introduction to Psychology
(CRN #73672)
Fall 2011

Instructor:	Richard S. Velayo, Ph.D.
Meetings:	T, R - 6:00pm - 8:45pm, Birnbaum Electronic Classroom (E101)
Office Location:	41 Park Row, Room 1324
Office Phone:	(212) 346-1506
Office Hours:	W, R - 3:00pm - 5:00pm (by appointment)
Course URL:	http://blackboard.pace.edu
E-mail:	rvelayo@pace.edu (preferred mode of communication)

Description

This web-enhanced (online) course introduces the student to the scientific study of behavior and mental processes. Modern psychology is broad in scope and rich in detail. The topics in this course have been chosen to provide a representative sample of important areas of active interest in psychology today. Topics include: introduction and research methods, neurosciences and biological foundations, sensation and perception, learning, memory, life span development, motivation and emotion, personality, psychological disorders, therapy, and social psychology.

This course requires your active reading of the assigned materials (i.e., textbook chapters), participation in online discussions, and two online exams (a Midterm and a Final). You will also be required to write a final paper in the form of a journal article critique on a course-related topic of interest to you.

Blackboard, a distance learning software program, will be utilized as the primary mode of instruction in order to disseminate information and to serve as the medium for discussion.

Textbook (Required)

Schacter, D. L., Gilbert, D. T., & Wegner, D. M. (2009). *Psychology*. New York, NY: Worth. [ISBN-13: 978-1-4292-3719-2]

Blackboard Resource Center

If you need help with Blackboard, go to: http://www.pace.edu/online-learning/online-help-students

How Do I login to Blackboard?

Go to http://blackboard.pace.edu. Click on the login button and enter your username and password; use your MyPace Portal username and password to login (e.g., cw94975n, tr87689w and jc73732p). If you do not know your username, you can search it at whitepages.pace.edu.

Online Learning Community & Orientation (Blackboard)

If you feel that you need more information on how to use Blackboard, there is a self-paced tutorial available to you. This tutorial may be accessed as follows: When you have successfully logged-on to Blackboard, you

will see a category called "My Organizations". You will see that one of the organizations listed underneath this is called "Online Learning Community". This is a self-paced program designed to prepare students for the online learning experience. It also provides information about the resources available to online students. All students enrolled in online courses are automatically placed in this community.

Course Documents

Course coverage is based on the chapters in the required textbook. Supplementary materials are organized into weekly folders located within the **COURSE DOCUMENTS** button of our **PSY112 Blackboard course**. These supplementary materials are organized on a weekly basis (generally beginning on Thursday and ending the following Wednesday).

Assignments

Discussion Board

Participation (Weekly)
Every week, your instructor will post a few questions pertaining to the assigned chapter(s) to motivate your learning of the course content. Each discussion forum will be based on the assigned chapter readings for the week. For example, the Chapter 3 (Neuroscience and Behavior) discussion board questions may be as follows:

- *To what extent do you think neuropsychology (neuroscience in general) may adequately explain how we think, feel , and behave? Explain your answer.*

- *There are many misconceptions surrounding the brain and its functioning. Pick at least two from the list of common perceptions about the brain and present your thoughts pertaining to them. You may find information sources on the web the support your ideas.*
  (a) The human brain is gray in color and firm to the touch.
  (b) Most people use only 10% of their brain
  (c) Functions are localized in either the left or rigth hemisphere.
  (d) Neurons cannot be newly created; they can only die with age.
  (e) Alcohol kills brain cells.

You are expected to ***regularly*** and to ***actively*** participate in all the weekly discussions by responding to each of the questions posted. The quality and frequency of your responses will be taken into account towards your grade. You are also expected to provide feedback to other students' responses. Discussions are meant to be *insightful, reflective, lively, and thought provoking.*

Your participation in the weekly discussion contributes significantly toward your final grade. You should respond completely and thoroughly to each of the posted question for the week's discussion board questions. ***Providing "quality" feedback to at least 4 of your other classmate's and/or instructor's initial postings*** in a way that makes the discussions intellectually stimulating will constitute "sufficient" participation, although you are encouraged to respond to more postings if you want a better participation grade for that week. It will be up to your instructor to determine the quality level of your postings and feedback to determine the appropriate grade for weekly participation in the discussion boards.

The main purpose of the online discussions is to enhance your learning of the concepts and applications presented in this course, and to further your thinking and writing skills.

There is no need to submit a written report for this requirement.

Final Paper

You are required to write an in-depth critique paper (**no longer than 6 pages, single-spaced**) of a journal article (theoretical and/or empirical studies) on a course-related topic, which is of interest to you. Your choice of a journal article requires your instructor's approval. You can find relevant articles by searching the PsycINFO and/or the PsycArticles database. [For questions or assistance on accessing the Pace University Library Resources, go to http://library.pace.edu]

Your final paper should be a review or critique of an academic or professional journal article in psychology published within the last 5 years. The structure of the paper should be as follows:

I. **Cite the Journal Article**
Example: Arnett, J. J. (2008). The neglected 95%: Why American psychology needs to become less American. *American Psychologist, 63*, 602-614.

II. **Summary of the Journal Article** [1 – 2 pages]

III. **Critique/Review** [3 – 4 pages]
[This is primarily opinion-based, but you are also expected to demonstrate your knowledge of psychology by using the concepts and terms covered in the textbook. Citing references is encouraged but not required.]

IV. **Implications for International Psychology** [1-page]
[What may be the potential relevance of this article on the internationalization of psychology? In other words, comment/discuss the extent to which the constructs and/or findings in the article apply to other cultures/nations.]

This course requirement is intended to supplement your learning of the course content and to enhance your ability to apply the concepts learned.

You will be given the opportunity to have your written critique read by other members of the class sometime during the latter part of the semester. Thus, your paper will be accessible online for other students to evaluate using the Student Grade Form. (This form is available on our course's Blackboard site). Other students in the course, including your instructor, will then provide feedback/comments to your paper. Details about this requirement will be discussed in the course of the semester.

An Individual Member Evaluation form must also be submitted. (This form is available on our course's Blackboard site). This will allow you to evaluate yourself given your perceived quality and/or effort you place in doing the paper.

A Final Paper Presentation Session is scheduled during the latter part of the semester. You will be given the opportunity to present your paper in class for no longer than ten (10) minutes. (This amount time of time may vary depending on the number of students scheduled to present during the day of presentation).

Exams

A **Midterm Exam** and a **Final Exam** will each be administered online. Each exam will cover specific chapters of your textbook assigned by your instructor. The exams are designed to test your knowledge of the material discussed in the assigned readings and to apply what you have learned from the course. The exams are in multiple-choice format.

Communication

Discussion

The **Discussion Board** area has been set up to operate like a live classroom; answer questions, ask questions, comment on the responses of your fellow classmates and instructors. This area can be very valuable to you if you encounter difficulty during the course. Check the Discussion area frequently. Your participation is part of your grade.

If you have personal and/or on-the-job experience relevant to a discussion topic or to a question from one of your fellow students, please do share your experiences as it relates to the chapter/topic covered. Active participation by everyone contributes to a more intellectually stimulating and engaging online learning experience.

Email

Please feel free to contact your instructor or your classmates via **email** at any time if needed. My email address is rvelayo@gmail.com. You classmates' (and instructor) email(s) may be accessed under the "Email" button on the PSY112 Blackboard site.

Course Topics and Schedule

WEEK	TOPIC	REQUIREMENT DUE
1 (Sep 7 – Sep 14)	***COURSE INTRODUCTION*** **CHAPTER 1: Psychology: The Evolution of a Science (including Historical Foundations)**	**PSY112 Syllabus**
2 (Sep 15 – Sep 21)	**CHAPTER 2: Methods in Psychology**	
3 (Sep 22 – Sep 28)	**CHAPTER 3: Neuroscience and Behavior** **CHAPTER 4: Sensation and Perception**	
4 (Sep 29 – Oct 5)	**CHAPTER 5: Consciousness** **CHAPTER 6: Memory**	**TOPIC for FINAL PAPER** **(Due on Oct 5)**
5 (Oct 6 – Oct 12)	**CHAPTER 7: Learning** **CHAPTER 8: Emotion and Motivation**	
6 (Oct 13 – Oct 19)	**CHAPTER 9: Language and Thought**	
7 (Oct 20 – Oct 26)	**MIDTERM EXAM**	**MIDTERM Exam** **(Due/Completed by Oct 26)**
8 (Oct 27 – Nov 2)	**CHAPTER 10: Intelligence** **CHAPTER 11: Development**	**ARTICLE for FINAL PAPER** **(Due on Nov 2)**
9 (Nov 3 – Nov 9)	**CHAPTER 12: Personality**	
10 (Nov 10 – Nov 16)	**CHAPTER 13: Social Psychology (including Gender and Multicultural Issues)**	

11 (Nov 17 – Nov 23)	**CHAPTER 14: Psychological Disorders**	
12 (Nov 24 – Nov 30)	***NO CLASS (Thanksgiving Break)***	
13 (Dec 1 – Dec 7)	**CHAPTER 15: Treatment of Psychological Disorders**	**FINAL PAPER** **(Due on Dec 7)**
14 (Dec 8 – Dec 14)	**CHAPTER 16: Stress and Health**	
15 (Dec 15 – Dec 21)	**FINAL EXAM** ***COURSE Wrap-up and EVALUATION***	**FINAL Exam** **(Due/Completed by Dec 21)** **Student Grade Form for FINAL PAPER** **(Due on Dec 21)** **Individual Member Evaluation Form for FINAL PAPER** **(Due on Dec 21)**

Grading

Each of the activities below constitutes part of your grade. Failure to participate in one or more activities may result in a significant reduction in your grade.

Final grades are calculated as follows:

Participation (Weekly Discussion Board) *(15 points per chapter; 16 chapters)*	48%	240 points
Final Project:		
Feedback from Class	4%	20
Feedback from Instructor	14%	70
Individual Member Evaluation	2%	10
Submission of Student Grade Form	2%	10
Midterm Exam	15%	75
Final Exam	15%	75
Total	**100%**	**500 points**

***Note**: One (1) point is subtracted for each day a course requirement is submitted late.*

Grading Scale

Note: This will be strictly enforced.

LETTER	POINTS	QUALITY POINTS
A	475 - 500	4.0
A-	450 - 474	3.7
B+	435 - 449	3.3
B	415 - 434	3.0
B-	400 - 414	2.7
C+	380 - 399	2.3
C	350 - 379	2.0
C-	335 - 349	1.7
D+	315 - 334	1.3
D	300 - 314	1.0
F	0 – 299	0.0

Attendance

Successful online learning requires that a student actively participates in each week's learning materials including:

- **Reading** course documents, textbooks, articles and web materials assigned.
- **Submission** of projects and papers on time.
- **Completion** of the course requirements (e.g. exams, written journal critique paper).
- **Participation** in the weekly discussion board forums and other activities

Excessive non-participation and failure to keep up with the course pace may result in a decreased or failing course grade. This is ***not a self-paced course***. Within each week, assignments may be worked on at times convenient to the student. However, the assignments are to be completed by the end of that academic week **(Wednesday by midnight).** If you are unable to participate during a particular week, please contact the instructor beforehand.

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities

The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Pace University Writing Center

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). Please refer to the Writing Center's website for information about polices and hours of operation.

PSYCHOLOGY 380*
Experimental Psychology 1
(CRN #70230)
Fall 2014

Instructor:	Richard S. Velayo, Ph.D.
Meetings:	M, W - 6:10pm - 8:10pm, W200B (1 Pace Plaza)
Office Location:	41 Park Row, Room 1308
Office Phone:	(212) 346-1506
Office Hours:	M, W - 3:30pm - 5:30pm (by appointment)
Prerequisites:	PSY112 and PSY205
Course URL:	http://blackboard.pace.edu
E-mail:	rvelayo@pace.edu (preferred mode of communication)

Course Description:

This is an intensive, six hours per week course that introduces research methodology in psychology. It will include theoretical and practical aspects of behavioral research. The primary activity for this semester will be the development of an original scientific research proposal. You will conduct the research and complete the research paper based on this proposal when you take PSY381: Experimental Psychology 2, for the following spring semester. Blackboard will be utilized to help disseminate announcements, archive course materials, supplement instruction, and update grades.

Objectives of Experimental Psychology 1 and 2:

The primary goal of the Experimental Psychology sequence (PSY380 and PSY381) is to develop the critical thinking skills necessary for students to:

- Critically evaluate primary, empirical research in psychology,
- Translate theoretical ideas into testable research hypotheses, and
- Evaluate these hypotheses by means of a logically developed research plan

To meet these goals, specific pedagogical material to be covered and activities to be carried out for this semester include:

- Conducting and reporting the results of a class research project.
- Theoretical coverage of the process of scientific inquiry and the logic of the empirical method.
- Coverage of the major experimental designs and methods used in psychology.
- Familiarization with the major statistical techniques used in analyzing behavioral data.
- Development of an original scientific research proposal.

[Note #1: Other sections of PSY380 may differ in their specific course requirements, course activities, and grading system. The general course objectives, however, should be similar.]

[Note #2: You will need to enroll with the same instructor for PSY380 and PSY381.]

** This syllabus may be accessed from the PSY380 Blackboard site at* http://blackboard.pace.edu/

Texts (Required):

Smith, R. & Davis, S. (2013). *The Psychologist as Detective: An Introduction to Conducting Research in Psychology* (6th Edition). NJ: Pearson/Prentice-Hall. (ISBN: 978-020585907-8)

Cronk, B. C. (2014). *How to Use SPSS: A Step-by-Step Guide to Analysis and Interpretation (8th Edition).* CA: Pyrczak. (ISBN: 978-1-936523-26-9)

American Psychological Association (2009). *Publication Manual of the American Psychological Association* (6th ed.). Washington, DC: American Psychological Association. (ISBN: 978-1-4338-0561-5)

Statistical Package: SPSS statistical software (More details will be provided…)

Course Requirements:
This course is organized into three "modules" that consist of the following:

1. **EXAMS Module** (150 points) - There is a Midterm and a Final Exam, each of which will cover specific chapters of your text/s (which may include the APA Publication Manual). The exam format may include multiple-choice and short-answer questions. A review sheet will be provided about a week prior to the scheduled exam.

2. **PARTICIPATION Module** (170 points) - This module is composed of 3 parts namely:
   - *Attendance* – Three (3) points are deducted for each meeting absent or late. Proof for excused absences is required.
   - *Chapter Presentation(s)* – Each student will be assigned selected sections of the textbook (Smith & Davis, 2013) to present in class. The assignment of chapters will be done early during the semester. The use of PowerPoint is required.
     [Note: There is no need to submit a written report for this requirement.] The in-class presentation should be about 30 minutes in length and should conform to the following format:
     (i) A summary of the chapter (Use examples in your presentation)
     (ii) Try to integrate examples or discussion that help provide an international or cross-cultural perspective in understanding the constructs and/or research methodology, associated with your assigned chapter/section.
     (iii) An open forum for questions from the students and the instructor
   - *Research Exercises* - In order to better illustrate psychological research, we will conduct, as a class, some designated class research project or projects. You will learn hypothesis-testing, experimental design, and data analyses (using SPSS), and data interpretation. Critically evaluating experimental methodology is also a major part of this exercise.

3. **RESEARCH PROPOSAL Module** (180 points) – Your team (up to 4 persons) will be required to undertake a research project that is of interest. In the course of developing your proposal, you will need to consult with the instructor regarding your topic and how the proposal is developing. Your conduct in carrying out your research is very important and will contribute towards a significant part of your grade. Your proposal must be typed in APA-style format (See Publication Manual of the American Psychological Association).
   This is a group activity, which is composed of 3 parts/phases, namely:

- *Draft of your Research Proposal* - This written project represents your team's first attempt at writing your proposal, which includes a title page, abstract, introduction (with literature review), methods, references, and accompanying appendices. Your proposal should be written in APA style. This requirement will be discussed in greater detail during the course of the semester.
  [Note: An important part of your draft is the *Literature Review*. Submission of the Literature Review is optional. However, for the draft of your Research Proposal, you are required to gather and cite literature/articles that are relevant to your proposed topic. A minimum of 15 references (i.e., journal articles) is required as part of your team's Final Research Proposal.]
- *Final Research Proposal* – This written project represents the final revisions made of ALL sections of your draft and must be written in APA style format.
- *Presentation of Research Proposal* – This involves presenting your Research Proposal in class during the latter part of the semester. Prepare for no more than 20 minutes to present your work and additional time will be allotted for open discussion. You are advised to use paraphernalia that supplement and enhance your presentation (e.g., audio-visual aids, demonstration activities, etc.)

[Note: Students and the instructor are involved in the grading of the Research Proposal Module. This will be explained in greater detail during the semester.]

Grading System

EXAMS Module = 150 points (30%)	
Midterm Exam	75
Final Exam	75
PARTICIPATION Module = 170 points (34%)	
Attendance	50
Chapter Presentation(s) (Instructor Evaluation)	50
Research Exercises (Class Research Project)	70
(7 exercises at 10 pts. each)	
RESEARCH PROPOSAL Module = 180 points (36%)	
Draft of Research Proposal	
Individual Member Evaluation	10
Instructor Evaluation	40
Final Research Proposal	
Individual Member Evaluation	10
Instructor Evaluation	40
Student Grade Form	20
Submission of Student Grade Form	10
Presentation of Research Proposal	
Individual Member Evaluation	10
Instructor Evaluation	40
TOTAL POINTS	**500**

** This syllabus may be accessed from the PSY380 Blackboard site at* http://blackboard.pace.edu/

Letter-Grade Equivalent ("strictly" followed)			
A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

Course Evaluation:
In order to improve our Dyson College courses we look to you, the students, for feedback. Near the end of the semester you will be asked to fill out an online evaluation form regarding your experience in this course.

Dyson College is "going green" so we have made this a paperless process, but we need your help to make this eco-friendly solution a success. You will receive an email directing you to the IOTA course evaluation site http://paceevals.com where you will find the Dyson courses that you are enrolled in for the current semester.

Your feedback is very important and your response will remain confidential. If you have any questions about the online evaluations, please contact Martina Blackwood at mblackwood@pace.edu.

Thank you for your participation in this important process.

Academic Integrity Policy:
Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities:
The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of

Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Pace University Writing Center:

The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). Please refer to the Writing Center's website for information about polices and hours of operation.

Other Reminders:

- You may find some of the answers to your questions pertaining to this course in this syllabus, so read it carefully!
- Regularly check the PSY381 Blackboard site to preview next meeting's topic/s, activities, and important announcements.
- Ask me if something isn't clear. I'm quite approachable . . . really! ...well, most of the time :)
- Keep all papers returned to you.
- There is no such thing as bargaining for a grade in this course . . . unless there is an error in correction or computation.
- One (1) point is subtracted for each day a particular course requirement is late. Note that it is possible that a course requirement is graded from multiple sources. In this case, one (1) point is subtracted from each grading source. This will be explained in greater detail during the semester.
- Put a smile on your face . . . it cools the brain! (See research by Zajonc.)

PSY380 SCHEDULE

[Note: Read the assigned chapter(s), if any, before the scheduled class meetings.]
Some class meeting may include consultations and updates regarding your team group's Research Projects.

E-mail:	rvelayo@pace.edu (preferred mode of communication)

Course Description

This is an intensive six hours per week course that aims to develop critical thinking skills in psychological research and to carry out the research proposal you have developed in PSY380. In PSY381, there is greater focus on the use of the SPSS statistical software. The primary activity for this semester will be the completion of an original scientific research study and to present it at a formal undergraduate psychology conference. Blackboard will be utilized to help disseminate announcements, archive course materials, supplement instruction, and update grades.

Objectives of Experimental Psychology I and II

The primary goal of the Experimental Psychology sequence (PSY380 and PSY381) is to develop the critical thinking skills necessary for students to:

- Critically evaluate primary, empirical research in psychology,
- Translate theoretical ideas into testable research hypotheses, and
- Evaluate these hypotheses by means of a logically developed research plan.

To meet these goals, specific pedagogical material to be covered and activities to be carried out for this semester include:

- Taking SPSS exercises that help demonstrate knowledge of SPSS (statistical analyses and interpretation of findings)
- Collecting and organizing data followed by analyzing and reporting the results of class research project/s through statistical analyses and graphical representations.
- Completion of the written scientific research report
- Presentation of a completed scientific research project at the Pace Psychology Conference.
- Possibly the submission of the research project to a local, regional, or national conference, or for publication.

Texts (Required):

Smith, R. & Davis, S. (2013). *The Psychologist as Detective: An Introduction to Conducting Research in Psychology* (6th Edition). NJ: Pearson/Prentice-Hall. (ISBN: 978-020585907-8)

Cronk, B. C. (2014). *How to Use SPSS: A Step-by-Step Guide to Analysis and Interpretation (8th Edition).* CA: Pyrczak. (ISBN: 978-1-936523-26-9)

American Psychological Association (2009). *Publication Manual of the American Psychological Association* (6th ed.). Washington, DC: American Psychological Association. (ISBN: 978-1-4338-0561-5)

**This syllabus may also be accessed from the PSY381 at* http://blackboard.pace.edu

Statistical Package: SPSS statistical software (More details will be provided…)

Course Requirements:
This course is organized into three "modules" that consist of the following:

1. **EXAMS Module** (150 points) - There is a Midterm and a Final Exam, each of which will cover your knowledge of hypothesis testing, identification and operationalization of the independent and dependent variables, statistical analyses, and interpretation of statistical results. The exam format will be short-answer essay questions.

2. **PARTICIPATION Module** (150 points) - This module is composed of 3 parts namely:
   - *Attendance, Classroom Conduct and Demeanor* – Three (3) points are deducted for each meeting absent or late. Proof for excused absences is required. Conduct and demeanor in the classroom are also evaluated by the instructor.
   - *SPSS Chapter Presentation(s)* – You will each be assigned a chapter from our SPSS textbook (Cronk, 2014) to present in class using the SPSS for Windows software package. The assignment of chapters will be done early during the semester. There is no need to submit a written report for this requirement. The presentation is approximately 15 - 20 minutes and should conform to the following format:
     - **(i) Demonstrate the step-by-step procedure on the use of the SPSS statistical package as shown in the chapter.**
     - **(ii) Explain when and under what situations will the statistical test(s) and procedure(s) you demonstrated may be used. You may describe other examples in the use of these test(s) or procedure(s)**
     - **(iii) Extra time may be allotted to allow for questions from the class and the instructor.**
   - *SPSS in-class exercise(s)* – These exercises are meant to reinforce your understanding and skill in using SPSS.

3. **RESEARCH PAPER Module** (200 points) – Your team (up to 4 persons) will be required to collect and statistically analyze data, write up a complete research paper, and formally present your paper based on the research proposal you developed in PSY380. In the process of completing this requirement, you consult with the instructor regarding your project and how it is developing. Your conduct in carrying out your research and working with your group is very important and will contribute towards your final grade for this module. Your paper must be typed in APA-style format (See Publication Manual of the American Psychological Association).

   This is a group activity, which is composed of 3 phases, namely:
   - *In-class writing exercises* – These exercises are meant to help your group complete certain requirements/sections of your research paper.
   - *Draft of your Research Paper* – This written project represents your team's first attempt at writing your paper, which includes a title page, abstract, introduction (with literature review), methods, results, discussion, references, and accompanying appendices. Your paper should be written in APA style. This requirement will be discussed in greater detail during the course of the semester.
   - *Final Research Paper* – This written project represents the final revisions made of ALL section of your draft and must be written in APA style format.
   - *Presentation of Research Paper* – This involves presenting your Research Paper in class during the latter part of the semester. You will be given 20 minutes to present your work and additional time will be allotted for open discussion. You are advised to use useful

paraphernalia to supplement your presentation (e.g., audio-visual aids, demonstration activities, etc.) In addition, you are required to present your paper at a formal undergraduate psychology conference.

[Note: Students and the instructor are involved in the grading of the Research Paper module. This will be explained in greater detail during the semester.]

Grading System

EXAMS Module = 150 points (30%)	
Midterm Exam	75
Final Exam	75
PARTICIPATION Module = 150 points (30%)	
Attendance	50
SPSS Chapter Presentation(s) (Instructor Evaluation)	30
SPSS in-class exercises (7 exercises at 10 pts. each)	70
RESEARCH PAPER Module = 200 points (40%)	
In-class writing exercises (4 exercises at 5 pts. each)	20
Draft of Research Paper	
Individual Member Evaluation	10
Instructor Evaluation	40
Final Research Paper	
Individual Member Evaluation	10
Instructor Evaluation	40
Student Grade Form	20
Submission of Student Grade Form	10
Presentation of Research Paper	
Individual Member Evaluation	10
Instructor Evaluation (Pace Conference)	40
TOTAL POINTS	**500**

Letter-Grade Equivalent ("strictly" followed)			
A	475-500	C+	350-374
A-	450-474	C	325-349
B+	425-449	C-	300-324
B	400-424	D	275-299
B-	375-399	F	below 275

**This syllabus may also be accessed from the PSY381 at* http://blackboard.pace.edu

Course Evaluation:
In order to improve our Dyson College courses we look to you, the students, for feedback. Near the end of the semester you will be asked to fill out an online evaluation form regarding your experience in this course.

Dyson College is "going green" so we have made this a paperless process, but we need your help to make this eco-friendly solution a success. You will receive an email directing you to the IOTA course evaluation site http://paceevals.com where you will find the Dyson courses that you are enrolled in for the current semester.

Your feedback is very important and your response will remain confidential. If you have any questions about the online evaluations, please contact Martina Blackwood at mblackwood@pace.edu.

Thank you for your participation in this important process.

Academic Integrity Policy:
Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work the ideas, words, or representations of another without proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea, or data borrowed from an outside source.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University. Individual schools and programs may have more specific procedures for violations of academic integrity. Therefore, students are encouraged to familiarize themselves with the academic integrity policies of the University and of individual schools and programs in which they are enrolled. Students penalized for failing to maintain academic integrity who wish to appeal such action must follow the appeal procedure outlined below in the "Grades Appeal Process" section or that of the individual school or program in which they are enrolled if such school or program has a separate appeal procedure in place.

Students with Disabilities:
The University's commitment to equal educational opportunities for students with disabilities includes providing reasonable accommodations for the needs of students with disabilities. To request an accommodation for a qualifying disability, a student must self-identify and register with the Coordinator of Disability Services for his or her campus. No one, including faculty, is authorized to evaluate the need and arrange for an accommodation except the Coordinator of Disability Services. Moreover, no one, including faculty, is authorized to contact the Coordinator of Disability Services on behalf of a student. For further information, please see *Information for Students with Disabilities* on the University's web site.

Pace University Writing Center:
The Pace University Writing Center offers tutorial services in writing as well as handouts and reference materials on writing for student use in person or via the web at www.pace.edu/dyson/writingcenter. The staff of instructor and student tutors can assist students in understanding writing assignments and criteria and can help students with any stage of the writing process, from brainstorming topics to revision of rough drafts. Students may be referred to the Writing Center as part of this course, or students may seek assistance with course writing on their own via web-based tutoring or by visiting the Writing Center in person (NY-Birnbaum Library, 2nd Floor, 346-1085; PLV-Mortola Library, 3rd Floor, 773-3942). Please refer to the Writing Center's website for information about polices and hours of operation.

Other Reminders:
- You may find some of the answers to your questions pertaining to this course in this syllabus, so read it carefully!
- Regularly check the PSY381 Blackboard site to preview next meeting's topic/s, activities, and important announcements.
- Ask me if something isn't clear. I'm quite approachable . . . really! ...well, most of the time :)
- Keep all papers returned to you.
- There is no such thing as bargaining for a grade in this course . . . unless there is an error in correction or computation.
- One (1) point is subtracted for each day a particular course requirement is late. Note that it is possible that a course requirement is graded from multiple sources. In this case, one (1) point is subtracted from each grading source. This will be explained in greater detail during the semester.
- Put a smile on your face . . . it cools the brain! (See research by Zajonc.)

PSY381 SCHEDULE

[Note: Read the assigned chapter(s), if any, before the scheduled class meetings.]
Each class meeting may include consultations and updates regarding your team's Research Projects.

DATE/s	TOPIC/s	SPSS Textbook Chapters*
Jan 26	***INTRODUCTION*** *- Experimental Psychology II* ***Sample Video of Pace Conference Presentation*** ***RESEARCH PROPOSAL*** *- Group Consultations: Do Revisions* *- IRB Application: UPDATES* ***- Qualtrics***	Course Syllabus IRB application packet
Jan 28	***RESEARCH PROPOSAL*** ***- Do Revisions*** (Continued) ***- Qualtrics***	
Feb 2	***RESEARCH PROPOSAL*** ***- In-class Pilot Testing*** (Continued) ***- Qualtrics***	

**This syllabus may also be accessed from the PSY381 at* http://blackboard.pace.edu

Feb 4	***RESEARCH PROJECT*** ***- In-class Pilot Testing*** (Continued) ***SPSS Chapter Presentation*** *1. Getting Started* *2. Entering and Modifying Data* ***SPSS In-class Exercise #1***	Chapter 1 Chapter 2
Feb 9	***SPSS Chapter Presentation*** *3. Descriptive Statistics* *PART 1 (Sections 3.1, 3.2, 3.3)* *PART 2 (Sections 3.4, 3.5)* ***SPSS In-class Exercise #2***	Chapter 3 (Part 1) Chapter 3 (Part 2)
Feb 11	***SPSS Chapter Presentation*** *4. Graphing Data* *PART 1 (Sections 4.1, 4.2, 4.3)* *PART 2 (Sections 4.4, 4.5, 4.6)* ***SPSS In-class Exercise #3***	Chapter 4 (Part 1) Chapter 4 (Part 2)
Feb 16	**NO CLASS (President's Day)**	
Feb 18	***SPSS Chapter Presentation*** *5. Prediction and Association* ***SPSS In-class Exercise #4***	Chapter 5

UNIVERSITY 101

UNV 101
(CRN# 46326)
Fall 2000

Instructor:	Richard S. Velayo, Ph.D.
Meetings:	Mondays, 5:30pm – 7:30pm
Instructor's Office:	41 Park Row, Rm. 1324 346-1506 (office phone)
Instructor's Office Hours:	T, R 3:00pm - 5:30pm (or by appointment)
Instructor's E-mail:	rvelayo@pace.edu
Peer Leader:	Omar Kennedy
Peer Leader's E-mail:	bajan_roman@yahoo.com
Peer Leader's Office Hours:	T, R 10:00am – 11:30am
CourseInfo Website:	http://courseinfo.pace.edu/courses/UNV-101-46326/

Course Objectives

- To help you make the transition into college life easier;
- To help you pick a major course of study and/or affirm the major that you have chosen;
- To develop/improve academic skills to assist with the college workload;
- To develop time management, decision making and critical thinking skills;
- To help you mature and be more responsible;
- To bond you to Pace through closer advisement and interaction with your peers and peer leaders.

Texts (Required):

Crawford, S. & Zeigler, M. (2000). Connections: A text compiled for Pace University's Freshman Seminar (2nd Edition). Boston, MA: Pearson Custom Publishing.

Reminders

This is a 13-week "Pass/Fail" course, 1-credit
You CANNOT DROP Unv101
Mandatory attendance (3 absences = Fail)
Attendance of three Pace events (To be announced)
Mandatory 5-minute oral presentation project
Weekly readings of the New York Times + written critique
Weekly readings of the "Connections" textbook

Weekly Readings of the New York Times

Before each class meeting, you are required to write a 1-page critique opinion paper of an article published in any of the past week's issue of the NY Times. Your written work should be posted in the UNV101 Discussion Board via CourseInfo (http://courseinfo.pace.edu/courses/UNV-101-46326/). The purpose of this activity is to provide you with awareness and experience on current events that are happening around you and to develop an appreciation for reading and writing. Your peer leader will provide you with feedback on your work.

Fall 2000 Schedule

Note: *You are required to do the assigned readings before the scheduled class meeting.*

Date	Topic	Readings*
Sept 11	Peer Introductions Course Expectations	pp. 6-11 ("Pace Univ. is…")
Sept 18	High School and College – What's the difference? The Core Curriculum: Why is "liberal arts" important for everyone? Preparing your Oral Presentation	pp. 20-26 pp. 48-53 pp. 69-72
Sept 25	Technology at Pace Discussion: Undergraduate Catalogue	pp. 168-180
Oct 2	Library Orientation (5:30pm-6:30pm)	pp. 159-167
Oct 9	No classes	
Oct 23	Academic Integrity Time Management	pp. 54-58 pp. 64-68
Oct 30	Diversity	pp. 80-92, 93-106
Nov 6	Wellness and Academic Success	pp. 108-117
Nov 13, 20	Career Planning Registration Information Oral Presentations	pp. 124-129, 139-152
Nov 27	Career Services and Cooperative Education Oral Presentations	pp. 130-138
Dec 4	Oral Presentations	
Dec 11	Oral Presentations (continued…) Wrap-up and Evaluations	

**Crawford, S. & Zeigler, M. (2000). Connections: A text compiled for Pace University's Freshman Seminar (2nd Edition). Boston, MA: Pearson Custom Publishing.*

PSY 323y– Psychology of Learning

PACE UNIVERSITY	NACTEL PROGRAM
BS in Professional Technology Studies: *Telecommunications Concentration*	Semester: Fall 2005

Credits: 4

Description

This course addresses traditional and contemporary theories of learning, conditioning. and memory processes. It surveys some of the important theories and findings in the psychology of learning. A historical look at the development of behavioral and cognitive theories, including current-based research as well as connectionism and models of memory, motivation, and social learning are presented. In addition, this course aims to enable students and professionals to apply the concepts learned more effectively in their work setting or in their personal lives. Students are expected to write a thorough review/critique of a journal article on a topic (or topics) covered.

Goals and Objectives

- To demonstrate understanding of the basic learning, conditioning, and memory concepts and principles of both by answering questions on exams and by appropriate application of these principles and concepts to a variety of contexts.
- To understand the theoretical and empirical studies that support the principles and concepts associated with each chapter.
- Be aware of the ethical considerations regarding the applications and techniques discussed in the course, given a specified context.
- Write a write a thorough review/critique of a journal article on a topic (or topics) covered. Both the topic and the journal require the instructor's approval.

Prerequisites

- There are no prerequisites.

Course Materials

All Books and Materials are available via the Pace University/ NACTEL Program online bookstore at: http://support.csis.pace.edu/nactel/program/bookstore.cfm

Required Books and Materials

Textbooks:

Lefrancois, G. R. (2006). *Theories of Human Learning: What the Old Woman Said* (5th Ed.). CA: Wadsworth [ISBN #0-534-64152-8]

Course Topics

WEEK	TOPIC	ASSESSMENTS
1	CHAPTER 1: Human Learning: Science and Theory	
2	CHAPTER 2: Early Behaviorism: Pavlov, Watson, and Guthrie	
3	CHAPTER 3: The Effects of Behavior: Thorndike and Hull	
4	CHAPTER 4: Operant Conditioning: Skinner's Radical Behaviorism	Topic for Journal Article Critique
5	CHAPTER 5: Evolutionary Psychology: Learning, Biology, and the Brain	
6	CHAPTER 6: A Transition to Modern Cognitivism: Hebb, Tolman, and the Gestaltists	
7	CHAPTER 7: Three Cognitive Theories: Bruner, Piaget, and Vygotsky	
8	CHAPTER 8: Neural Networks: The New Connectionism Chapter 9: Learning and Remembering	Approval of Journal Article (A copy of the article must be sent to the instructor.)
9	CHAPTER 10: Motivation	
10	CHAPTER 11: Social Learning: Bandura's Social Cognitive Theory	
11	CHAPTER 12: Analysis, Synthesis, and Integration	DUE: Journal Article Critique
12	Evaluation of PSY 323y	Proctored Final Exam; Student Grade Form for Journal Article Critique; Individual Member Evaluation Form Due

Course Documents

Course material is organized into weekly folders located within the **COURSE DOCUMENTS** button of **Blackboard**. Each Thursday, by midday, a new folder will be made available for you to actively read through and comprehend the material. You have an entire week (Thursday through the following Wednesday) to go through the information. Once available, folders will remain active throughout the duration of the course for you to review material on your own.

Assignments

Discussion Board

Participation

As a student in the course, you are expected to regularly and to actively participate in all the weekly discussions by responding to each of the questions posted. The quality and frequency of your responses will be taken into account towards your grade. You are also encouraged to

provide feedback to other students' responses. Discussions are expected to be *insightful, reflective, lively, and thought provoking.*

These online discussions will focus not only on enhancing your learning of the concepts and applications presented in this course, but also to further your thinking and writing skills.

Facilitation of Discussion Forum
Each week, there will be assigned student facilitator(s) or your instructor will post a few questions to motivate your learning of the course content.

You will be required to facilitate a discussion forum on a topic in one of the chapters from the textbook. This will involve posting questions and/or an interesting activity on or before the first day (Thursday) that your assigned topic is covered. For example, if you were assigned to facilitate Chapter 3 (The Effects of Behavior: Thorndike and Hull), your set of questions should be posted by Thursday morning. Your goal is to generate a lively online discussion on the chapter topic. Examples of discussion questions that may be posted are:

"What do you think are the implications of the concepts learned in the chapter with regards to the "No Child Left Behind Act" requirements."

"In an aside, the Old Woman stands and swats a spider from her arm. How would learning theories discussed thus far best explain her reaction to the arachnid? The author watches the spider and is curious about the spider's reaction to its altered external environment. Do you think behavioristic learning theories address external environmental influences? Explain your answer.

The chapter(s) that you will facilitate is assigned to you early during the semester. Procedurally, you will be asked to send your instructor your questions(s) first via e-mail so that these may be looked over prior to posting. Your instructor may need to modify or make changes so that about 2-4 discussion questions are posted. Your instructor will post these questions for you. As a discussion board facilitator, you are expected to actively respond and provide feedback to your classmates' responses. [**Note:** You are also expected to respond to the questions posted for the week you facilitate.]

There is no need to submit a written report for this requirement.

Projects

Journal Article Critique (Individual project)
You will be required to write an in-depth critique (no longer than 4 pages, single-spaced) of a journal article (theoretical and/or empirical studies) in which the topic is covered in the course and is of interest to you. Your choice of a journal article requires your instructor's approval. You can find many article by searching the PsychINFO and/or PsycArticles database . These contain psychology journals and full-text versions of these articles. [For questions or assistance on accessing the Pace University Library Resources, go to http://support.csis.pace.edu/nactel/gotoclass/library.cfm]

The paper should be a review or critique of an academic or professional journal article in psychology published within the last 5 years. The structure of the paper should be as follows:

I. Cite the Journal Article

Example:

Gershoff. E. T. (2002). Corporal Punishment by parents and associated child behaviors and experiences: A meta-analysis and theoretical review. *Psychological Bulletin*, 128, 539-579.

II. **Summary of the Journal Article** (no longer than half a page, single-spaced)

III. **Critique/Review** [This is primarily opinion-based, but you are also expected to demonstrate your knowledge of this course by using the concepts and terms covered.]

This course requirement is intended to supplement your learning of the course content and to enhance your ability to apply the concepts learned.

You will be given the opportunity to have your written critique read by other members of the class sometime during the latter part of the semester. Thus, your paper will be accessible online for other students to evaluate using the Student Grade Form. Other students in the course, including your instructor, will then provide feedback/comments to your paper. Details on the technical aspects of this requirement will be discussed in the course of the semester.

An Individual Member Evaluation form must also be submitted. (This form will be made available online). This will allow you to evaluate yourself given your perceived quality and/or effort you placed on doing the paper.

Exams

Final Exam

There is a **proctored Final Exam**, which will cover all the chapters of your textbook. This is designed to test your knowledge of the material covered in the assigned readings and to apply what you have learned from the course. The format may include multiple-choice, true-false, and short answer questions. A review sheet will be posted about a week prior to the scheduled exam.

Communication

Discussion

The **Discussion Board** area has been set up to operate like a live classroom; answer questions, ask questions, comment on the responses of your fellow classmates and instructors. This area can be very valuable to you if you encounter difficulty during the course. Check the Discussion area frequently. Your participation is part of your grade.

If you have personal and on-the-job experience relevant to a discussion topic or to a question from one of your fellow students, please share your knowledge. Active participation by everyone makes the class better for everyone.

Email

Please feel free to contact your instructors or your classmates via **email** at any time.

Grading

Each of the activities below constitutes part of your grade. Failure to participate in one or more activities may result in a significant reduction in your grade.

Final grades are calculated as follows:

Participation *(10 points for each of the 15 weekly discussion boards)*	30%	150 Points

Facilitation of Discussion Forum	20%	100
Journal Article Critique:		
Feedback from Class	6%	30
Feedback from Instructor	8%	40
Individual Member Evaluation	4%	20
Student Grade Form	2%	10
Final Exam (proctored)	30%	150
Total	**100%**	**500 Points**

Grading Scale
[Note: This will be strictly enforced.]

LETTER	POINTS	QUALITY POINTS
A	465 - 500	4.0
A-	450 - 464	3.7
B+	435 - 449	3.3
B	415 - 434	3.0
B-	400 - 414	2.7
C+	380 - 399	2.3
C	350 - 379	2.0
C-	335 - 349	1.7
D+	315 - 334	1.3
D	300 - 314	1.0
F	0 - 300	0.0

Proctoring

Please note that this course **requires a proctor**. You can read more about the proctoring program and steps needed to obtain an approved proctor by clicking on this link: Proctoring Program.

There will be a one proctored examination (Final Exam) for this course. Specific details will be provided once classes begin.

Attendance

Successful online learning requires that a student actively participate in each week's learning materials which may include:

- **Reading** course documents, textbooks, articles and web materials
- **Submission** of homework assignments, projects and papers
- **Completion** of any available quizzes, exams and laboratories
- **Participation** in the weekly discussion board forums, team activities and email.

Excessive absences and failure to keep up with the course pace may result in a decreased or failing course grade. Recall that this is **not a self-paced course**. Within each week,

assignments may be worked on during times convenient to the student. However, the assignments are to be completed by the end of that academic week (Wednesday at midnight). If you are unable to participate during a particular week, please contact the instructor beforehand.

Disabilities

If a student believes that he/she has a disability that may affect academic performance, that student should notify Pace University's Counseling Center for assessment and advisement. If a student tells the instructor that he/she has a disability, the instructor is bound by University policy to notify the appropriate University representative of such disability.

Academic Integrity Policy

Students must accept the responsibility to be honest and to respect ethical standards in meeting their academic assignments and requirements. Integrity in the academic life requires that students demonstrate intellectual and academic achievement independent of all assistance except that authorized by the instructor. The use of an outside source, including electronic sources, in any paper, report or submission for academic credit without the appropriate acknowledgment is **plagiarism**. It is unethical to present as one's own work, the ideas, words or representations of another without the proper indication of the source. Therefore, it is the student's responsibility to give credit for any quotation, idea or data borrowed from an outside source.

As a student, you cannot copy work from someone else's disk to your own or print two copies of the same assignment to be handed in by two individuals. Each student must do his/her own work. It is easy for instructors to tell when data has been duplicated between students. All instructors reserve the right to challenge work they feel has not been completed independently.

Students who fail to meet the responsibility for academic integrity subject themselves to sanctions ranging from a reduction in grade or failure in the assignment or course in which the offense occurred to suspension or dismissal from the University.

The **first time** that a student submits an assignment or an assessment that is not completely his or her own at Pace University, the student will receive a **0 grade** for that individual assignment/assessment.

The **second time** that a student submits an assignment or an assessment that is not completely his or her own at Pace University, the student will receive an **F for that course**.

The **third time** that a student submits an assignment or an assessment that is not completely his or her own at Pace University, the student will be **dismissed from the University**.

The process will be monitored by the NACTEL Academic Review Committee. Students penalized for failing to maintain academic integrity who wish to appeal such action may petition the Department Chair to request a hearing on the matter.

How can we best internationalize undergraduate psychology education in the United States and elsewhere? This question is more timely than ever, for at least 2 reasons: Within the United States, educators and students seek greater contact with psychology programs abroad, and outside the United States, psychology is growing apace, with educators and students in other nations often looking to U.S. curricula and practices as models. In this article, we outline international developments in undergraduate psychology education both in the United States and abroad, and analyze the dramatic rise of online courses and Internet-based technologies from an instructional and international point of view. Building on the recommendations of the 2005 APA Working Group on Internationalizing the Undergraduate Psychology Curriculum, we then advance 14 recommendations on internationalizing undergraduate psychology education—for students, faculty, and institutions.

Keywords: undergraduate education, international psychology, teaching psychology, diversity, MOOC

> On U.S. college campuses, we psychologists should be teaching our undergraduates about human behavior, not just behavior in North America.
>
> —David G. Myers

Psychology is a highly popular subject of study for American undergraduates. Between 1.2 and 1.8 million U.S. students enroll in the introductory course each year (Gurung et al., 2016). More than 100,000 U.S. students earn their bachelor's degrees in psychology annually (Norcross et al., 2016)—114,450 degrees in 2013 (National Center for Education Statistics, 2015).

It is, however, less well known that in recent decades, psychology has been expanding apace in many corners of the world, making undergraduate education in psychology hugely popular around the globe (McCarthy, Dickson, Cranney, Trapp, & Karandashev, 2012). American psychologists now account for only an estimated 21% to 24% of the world's psychologists (Bullock, 2012a; Zoma & Gielen, 2015), down sharply from an estimated 80% in the 1980s (Rosenzweig, 1984). Increasingly, the educational practices and knowledge base of psychology are constructed on a worldwide basis, yet current American psychology curricula insufficiently reflect this trend.

This article describes how international and cross-cultural contributions can be purposefully integrated into undergraduate psychology education so that undergraduates both in the United States and elsewhere are better prepared for an

Editor's note. This article is one of a collection of four articles published with undergraduate education guidelines in a special issue of *American Psychologist*, "Undergraduate Education in Psychology: Current Status and Future Directions" (February–March 2016). John C. Norcross and Robin Hailstorks provided scholarly lead for the special issue.

Authors' note. Harold Takooshian, Department of Psychology, Fordham University; Uwe P. Gielen, Department of Psychology, St. Francis College; Scott Plous, Department of Psychology, Wesleyan University; Grant J. Rich, Department of Psychology, Ashoka University; Richard S. Velayo, Department of Psychology, Pace University.

The five authors contributed equally to this article. The authors thank several colleagues for their kind cooperation: Sarah Brookhart, Merry Bullock, Shane R. Jimerson, Robin Hailstorks, Tim Kasser, David G. Myers, John C. Norcross, Thomas D. Oakland, Jerry Rudmann, Andreina Parisi-Amon, Ann D. Watts, Gary VandenBos, Maryam Zoma, and three anonymous reviewers.

Harold Takooshian

increasingly interdependent world. In addition, this article describes how a modern psychology curriculum can enable students to gain international experience by facilitating their interactions with overseas students and faculty either in person or via electronic means, such as online courses and Internet-based technologies. The Internationalization of Curricula (IoC) is a movement affecting many fields (Leask, 2015), and is especially valuable for undergraduate psychology in more than one way, to increase (a) our understanding of human behavior in general, across diverse nations and cultures; and, (b) the "world-consciousness" of all psychology students in the United States and elsewhere—to nurture what has been termed "global psychological literacy" (Cranney & Dunn, 2011; Dunn, 2015).

In the following, we provide a brief history of the international growth of psychology, followed by how these international developments and new forms of diversity relate to undergraduate psychology education. Because the recent dramatic growth of international education is driven to a significant degree by technological changes, we address massive open online courses (MOOCs) and the pervasive influence of Internet-based technologies on students and faculty. These sections are followed by a set of 14 recommendations outlining how undergraduate psychology education might best be internationalized on three levels—by undergraduate students, their faculty, and institutions.

The Growth of Psychology as an International Discipline

Psychology as a discipline with a firm, institutional identity was born in the 1870s in Germany, spread to other European countries and the United States within the next few years, and soon thereafter also became known in some Asian and Latin American countries, such as Japan, China, Mexico, and India (Stevens & Wedding, 2004). Thus, Western-style psychology had an international dimension from its beginnings, but it would grow into a full-blown global discipline in the late 20th and early 21st centuries (Rich & Gielen, 2015).

After Wilhelm Wundt established the first psychological institute in Leipzig in 1879, his highly popular lectures and his laboratory soon attracted students from numerous Western as well as several non-Western countries. Many of these international students accepted his vision of a new, scientific discipline and returned home to establish laboratories and institutes in their own countries. By 1897, Wundt's laboratory expanded to 14 rooms, filled with students from 20 nations—from Japan to Chile (Misiak & Sexton, 1966).

Wundt had many American students and assistants, such as James McKeen Cattell. Although most of them rejected or ignored Wundt's theoretical outlook, they nevertheless formed an important part of the founding generation that would soon, together with William James and others, help American psychology assume worldwide leadership. By 1900, there were 40 doctoral programs and 41 laboratories at American universities, whereas only 10 laboratories could be found in Europe (Benjamin, 2000). Moreover, psychology was rapidly becoming one of the most popular subjects at the undergraduate level, while intriguing the general public (Schultz & Schultz, 2012).

In addition, during the 1930s and 1940s, many elite Austrian and German psychologists migrated to the United States. After 1945, American psychology began to dominate the worldwide scene not only based on its sheer number of psychologists but also through its journals, scientific research, textbooks, the growing dominance of English in scientific publications, and the country's economic and political power. There were now more psychological scientists, practitioners, and educators in the United States than in all other nations combined—to the point where some began to fault American psychology as being "self-absorbed" (Rosenzweig, 1984) or even "xenophobic" (Sexton & Misiak, 1984). These American critics argued that American psychology was assuming a monocultural and monolingual character while ignoring many new developments, especially in the non-English-speaking countries.

But this trend has changed dramatically since the 1990s, as psychology now grows faster outside than inside North America (Bullock, 2012a, 2012b), and colleagues inside and outside the United States seek greater communication. By integrating data from diverse sources (e.g., Bullock, 2013; Cooper, 2014; Lunt, Peiró, Poortinga, & Roe, 2015; Stevens & Gielen, 2007; Stevens & Wedding, 2004), one may estimate conservatively that there are 1 million psychologists worldwide: roughly 230,000 in the United States,

This article is intended solely for the personal use of the individual user and is not to be disseminated broadly.

Uwe P. Gielen

330,000 in Latin America, 330,000 in Europe, and 100,000 in the rest of the world (Zoma & Gielen, 2015).

International Diversity in U.S. Psychology Education

Although discussions about *diversity* are now frequently included in U.S. psychology courses, this was not always the case. Through most of the 20th century, the classic psychology experiments that American instructors present to their undergraduates—such as Solomon Asch's (1955) study on conformity and Philip Zimbardo's (1972) study of prisoners—were based on small samples that were intentionally homogeneous: White male U.S. college students. This control for gender, age, and race was an easy way to reduce confounding variables, tacitly leaving it to other researchers to cross-validate how much these findings on White male students might generalize to the other 99.9% of humanity—women, nonstudents, other ages, ethnicities, or nations. As late as 1986, an analysis of U.S. social psychology journals found that 72% of articles used North American undergraduates as subjects (Sears, 1986), and it concluded that this narrow database was giving our undergraduates a distorted picture of human nature. One psychologist wryly noted that in psychology experiments, "Even the rat was white" (Guthrie, 1998).

The 1991 Saint Mary's conference on the undergraduate curriculum noted the importance of diversity to "ensure that psychology courses more accurately reflect the diversity of humankind, including ethnic, social, cultural, and gender diversity" (McGovern, 1993, p. 179), as well as greater inclusion of underrepresented minority students and faculty in the psychology pipeline. Then in 2008, the inclusion of "sociocultural diversity" in the undergraduate curriculum became a major emphasis through the Puget Sound conference (Landrum et al., 2010), including the promotion of "psychological literacy" among citizens worldwide (Halpern, 2010). In fact, the American Psychological Association's (APA's) Board of Educational Affairs "noted that diversity is a particularly important aspect of the *Guidelines*" (Hailstorks & Boenau, 2013), and the revised *APA Guidelines for the Undergraduate Psychology Major 2.0* (APA, 2016) feature "Ethical and Social Responsibility in a Diverse World" as the third of its five broad learning goals. The "sociocultural diversity" in these *Guidelines 2.0* includes both multicultural diversity within the United States as well as international diversity across nations—which is the central focus of this article.

APA has a long history of promoting international psychology education, even before the formation of its Committee on International Relations in Psychology in 1944 (Fowler, 2000). The APA Office of International Affairs, formed in 1971, offers a website rich with global resources, travel funding, and a bimonthly bulletin (*Psychology International*). In 2008, the APA Education Leadership Conference focused its annual meeting on this theme of internationalizing psychology education (Torney-Purta, 2008), on the heels of an APA Working Group on Internationalizing the Undergraduate Psychology Curriculum (2005).

Because the question of educational "outcomes" is important, the 2005 APA Working Group identified five valuable goals of IoC in psychology, each with five measurable outcomes. Examples of these 25 outcomes include an increase in students' sociocultural awareness (Outcome 1.1); understanding of research methods applied across cultures (Outcome 2.3); knowledge of the field of psychology in other nations (Outcome 3.2); cross-cultural competence of students on a personal level (Outcome 4.4); and appreciation of global issues of human rights and social justice (Outcome 5.4). These 25 outcomes are not yet documented, but are best seen as an agenda for future researchers, to assess the actual impact of IoC on students' knowledge, attitudes, and actions.

Of course, U.S. undergraduate psychology courses should be relevant to the 95% of the human population living outside the United States, but creating such a cross-national science of behavior has been a challenge (Rosenzweig, 1984). Unlike physical sciences such as chemistry, which share a "periodic table" across nations, psychology lacks a solid core that is recognized cross-nationally (Howell, Collisson, & King, 2014).

To borrow from the concepts of Newtonian physics, we can see the challenge of a transnational psychology as a tension between two opposing forces. These are (a) the strong "centrifugal" (outward) forces that divide cross-national psychology and include the familiar obstacles of language, distance, cost, sociocultural variations, and ide-

This article is intended solely for the personal use of the individual user and is not to be disseminated broadly.

Scott Plous

ology (Draguns, 2001); and (b) the strong "centripetal" (inward) forces that increasingly bind cross-national psychology: quadrennial and other world congresses, journals, cross-national educational and research efforts (such as Fulbright scholarships and study abroad), and now the Internet.

The Growth of Psychology Education Outside the United States

Since the 1990s, the numbers of psychologists, psychology programs, and course enrollments have increased rapidly around the globe. In 2012, over 4 million tertiary-level students were studying psychology and other subjects outside their own nation, up from 2 million in 2000 (UNESCO Institute for Statistics, 2014). And in the academic year 2013–2014, 886,052 international students were enrolled in U.S. institutions of higher education (4.2% of all students)—up 72% from 1999–2000 (Institute of International Education, 2014). Moreover, 289,408 U.S. students were studying overseas in the 2012–2013 academic year.

A growing number of international conferences, publications, and other resources support instructors who seek to internationalize their undergraduate courses. For instance, *Psychology Resources Around the World*, a web-based compendium of psychology in nearly every nation in the world, has been developed by the International Union of Psychology Science (IUPsyS: Bullock, 2012b). McCarthy and colleagues have produced three volumes of an edited series, *Teaching Psychology Around the World* (McCarthy et al. 2007, 2009, 2012), describing both education requirements and best practices in many nations. Six International Conferences on Psychology Education have been held since the first one in Russia in 2002. Psi Chi, the once-U.S. Honor Society for Psychology, voted in 2009 to expand into the International Honor Society for Psychology, and formed chapters in 10 nations within 5 years (McCormick et al., 2014).

Psychology education is flourishing in Western and non-Western countries alike. One clear example is Indonesia—the world's fourth most populous nation, with 252 million inhabitants. For decades, psychology was largely unknown among Indonesia's general public, until its first psychology department was founded in 1960 at the University of Indonesia. Yet by 2011, Indonesian students could study psychology in 95 departments across the country, and Indonesian psychologists appear so often on national TV and radio, and in newspapers and popular magazines, that the "psychological literacy" of the Indonesian public may now surpass that of the American public (Sarwono, 2011).

In some nations (such as Argentina, Brazil, Indonesia, Israel, and the Netherlands), psychology is taught to large numbers of psychology "undergraduates," and it has also entered the popular culture. In other countries (such as Cameroon, Mexico, Philippines, South Korea, and Taiwan), efforts are underway to "indigenize" psychology theories and research to reflect a region's unique cultural, social, and linguistic traditions. Many scholars in these non-Western countries believe that psychology education must be indigenized so that undergraduates can better understand psychology's relevance to their own lives. Some members of this movement aim to create a unified global psychology that can integrate diverse cultures and contributions from psychologists across many nations, whereas others emphasize the cultural embeddedness of almost all psychological processes (Kim, Yang, & Hwang, 2006).

It is valuable for U.S. and other psychology students to learn about these struggles to create both locally meaningful and globally unifying forms of psychological science. After all, many of these struggles revolve around the central psychological question of whether there is a universal human nature—and whether Western psychology has been successful in identifying most of its essential aspects, or whether it has been (partially) led astray by implicit but powerful cultural perceptions and norms (as described in www.indigenouspsych.org/). In international circles, some scholars have described North Americans as demographically "WEIRD"—White, Educated, Industrious, Rich, Democratic (Henrich, Heine, & Norenzayan, 2010), and thus not representative of populations in "ROW" (the Rest of World).

Although psychology has been growing rapidly outside the United States, the definitions and credentialing practices associated with the term "psychologist" vary considerably between nations. As a consequence, we lack sound global data comparable with the United States. The American system draws a clear distinction between undergraduate and

This document is copyrighted by the American Psychological Association or one of its allied publishers.
This article is intended solely for the personal use of the individual user and is not to be disseminated broadly.

Grant J. Rich

graduate education based on the structure of the American university and college system. Most American 4-year college students pursue a liberal arts education in which required courses for their major occupy no more than 20% to 30% of coursework. The baccalaureate degree is prerequisite for future graduate education. In contrast, most psychology students in South America do (or did) not "major" in psychology. Instead, upon graduation from a selective high school, they enter a university to pursue a professional degree for about five years, and graduate with a professional bachelor's degree in psychology that, together with a period of supervised practice, allows them to practice psychology. (This degree is more comparable with a U.S. master's degree.) However, only a small fraction of these licensed psychologists will later pursue a master's or doctoral degree (Klappenbach, 2004).

In Europe, undergraduate education has been changing dramatically since the 1990s under the so-called Bologna process. Now, the 36 countries in the European Federation of Psychologists' Associations (EFPA) have been developing unified systems and standards for education and credentialing that are transforming psychology in Europe. In 2000, EFPA launched its "tuning" process to address the needs of students and employers for "transparent and reliable information as to what a degree qualification stands for in practice" (Lunt et al., 2015, p. 70). This process covers all education levels in Europe, including Levels 6 (baccalaureate), 7 (master's), and 8 (doctorate).

The EuroPsy Basic Certificate specifies outcomes for a 3-year program leading to a bachelor's degree, followed by a 2-year master's degree, and a 1-year period of supervised practice (Lunt, 2014; Lunt et al., 2015). At the same time, the EuroPsy initiative endeavors to protect "the rich diversity of European education . . . and in no way seeks to restrict the independence of academic and subject specialists or undermine local and national academic authority" (EuroPsy, 2011, p. 6). This effort is supported by 36 national psychology associations representing more than 300,000 psychologists who, in turn, serve more than 740 million people. Over time, this EuroPsy initiative may well shape undergraduate and graduate education in psychology outside Europe as well. This EuroPsy initiative moves European psychology education one step closer to the American educational model with its clear separation between undergraduate and graduate education. However, this movement has not been welcomed by everybody.

In addition to the EuroPsy efforts in Europe and the *APA Guidelines 2.0* (APA, 2016) in the United States, a third effort to enunciate a set of the goals for a diverse psychology education has been pursued by the International Baccalaureate Organization (IBO). Since 1960, the IBO is an independent multinational association that has developed international curricula and exams for 26 fields, including psychology. Like the U.S. Advanced Placement (AP) program, the IB Diploma gives motivated secondary school students, Ages 16 to 19, a chance to earn college-level credits. As of 2014, 1.1 million students at 3,789 schools in over 40 nations have studied for IB exams, including 17,200 IB exams in psychology (11,300 of these in the United States; IBO, 2009). So far, there appears to be little direct contact between leaders of these three independent efforts, though this may change with time, given their common goals to develop a solid undergraduate curriculum that also incorporates global diversity.

The role of new instructional technologies is especially relevant in supporting the goal of internationalizing psychology and other curricula. Just as new technologies in the 21st century are transforming higher education, one impact is to reduce these centrifugal barriers to internationalization—travel, cost, and language. By all accounts, technologies such as open online courses and Internet-based technologies will play a major role in the future of undergraduate education worldwide, including psychology.

MOOCs

One of the most notable developments in global education has been the rise of MOOCs, with important implications for undergraduate education and global psychological literacy. Although definitions vary, MOOC generally refers to a free or low-cost Internet-based course taken by a large number of people. These courses first garnered widespread media attention in the fall of 2011, when a Stanford University computer science professor enrolled more than 160,000 students in a MOOC on artificial intelligence, and 23,000 completed the course. A year later, an article in the

This document is copyrighted by the American Psychological Association or one of its allied publishers.
This article is intended solely for the personal use of the individual user and is not to be disseminated broadly.

Richard S. Velayo

New York Times dubbed 2012 "the year of the MOOC," with good reason. By then, newly formed MOOC providers such as Udacity, edX, and Coursera had already enrolled millions of students, and the largest of these organizations, Coursera, reported growing at a rate faster than Facebook (Pappano, 2012).

The first MOOCs offered by Udacity, edX, and Coursera were in computer science, but today psychology-related MOOCs are among the most popular online courses, just as psychology courses have long been popular on college campuses. In fact, based on student registration figures that combine the first and second run of each course, four of Coursera's six most heavily enrolled MOOCs have focused on psychology, thinking, or behavior. These four Coursera courses include Social Psychology, with an initial enrollment of 633,131 students; Think Again: How to Reason and Argue (376,629 students); A Beginners Guide to Irrational Behavior (357, 511 students); and Learning How to Learn: Powerful Mental Tools to Help You Master Tough Subjects (321,617 students). Since 2012, MOOCs have also grown more international. For example, Coursera began exclusively with U.S. partner schools and instructors, yet nearly 40% of its 900 courses are now from partners outside the United States, and only 29% of its students are American.

Of course, distance learning—whether domestic or international—is not a new phenomenon. For most of the 20th century, correspondence courses taken through the mail were quite popular (Kett, 1996), and since 1990, The Teaching Company has offered more than 500 college-level Great Courses in a variety of audio and video formats. The video series *Discovering Psychology* has reached millions of PBS viewers since 1990, and has been taken as a tele-course for college credit by more than 500,000 students worldwide (Philip Zimbardo, personal communication, October 29, 2014). With the Internet, millions of online learners began watching educational videos and taking self-paced courses through KhanAcademy.com, lynda.com, and hundreds of other distance learning websites. It remains unclear what long-term impact this online explosion will have on traditional undergraduate psychology courses, but at the very least, MOOCs appear to be increasing psychological literacy worldwide.

What distinguishes MOOCs from other forms of online learning is that MOOCs usually take place with a large cohort of online learners from around the world. Typically, MOOCs include a combination of "courseware" (online course content) and elements of real-time traditional college courses, such as peer interaction, teaching assistants, and homework deadlines. Most often, MOOCs release course materials one week at a time, thereby allowing students in different time zones to learn about topics together as the course unfolds, help each other in online forums, and in some classes, assess one another's work.

Why this meteoric rise of MOOCs since 2012? The most obvious answer is that the technology has only recently become available—including global high-speed Internet access, bandwidth to stream videos, cloud storage of data, and the ability to create interactive online lectures that require students to answer questions before the video will advance. Yet technology is only part of the answer; MOOCs also provide a variety of economic and pedagogical benefits over traditional forms of education, particularly when it comes to internationalization.

The Benefits of MOOCs

On a per student basis and compared with traditional undergraduate courses, MOOC technology "can be used to enhance productivity in higher education by reducing costs without compromising student outcomes" (Griffiths, Chingos, Mulhern, & Spies, 2014, p. 4). Given the soaring costs of higher education in many countries, including the United States, it will become increasingly difficult for universities to ignore the economy of scale of these MOOCs.

MOOCs also offer benefits from the perspective of students. Not only are the courses less expensive and more accessible than most traditional classes, but for low-income students or people who live in a low-income nation, MOOCs may represent the only affordable opportunity for higher education. (In 2014, nearly half of all students in Coursera's Social Psychology MOOC were in countries with an emerging economy.) Since MOOCs are accessible around the clock, students can watch the lectures and receive online help from fellow classmates at any hour—a key advantage for students who are single parents, full-time workers, or homebound because of disability or illness.

For international students not fluent in the instructor's language, MOOCs offer several other advantages over traditional instruction. First, videotaped lectures can be watched with subtitles, often in the student's native language. Second, students taking a MOOC can replay the lectures as many times as they like. Third, MOOC lectures usually have an option that allows students to slow down the video when needed. And fourth, students can use the class forums to study and help one another in their native language.

Indeed, because the students who enroll in MOOCs come from so many countries, the need for language support is even greater than in traditional classroom settings. In the Coursera Social Psychology MOOC, students came from more than 200 countries, spoke more than 40 different primary languages, and listed a primary language other than English nearly half of the time. To meet the needs of these students, lecture subtitles were available in 27 languages, thanks to volunteer translators who donated their services. On average, according to Coursera, the enrollment of students who speak a non-English primary language triples when a MOOC offers subtitling in their language (Andreina Parisi-Amon, personal communication, November 1, 2014).

These enrollment patterns highlight the central role of language in international psychology education, and they suggest the importance of incorporating pedagogical practices that meet the linguistic and cultural needs of students. Whether courses are online or on campus, internationalizing psychology education will require platforms that facilitate peer interaction, language support such as video subtitling, visual and nonverbal demonstrations of key principles, and the inclusion of diverse cross-cultural examples that engage students regardless of nationality. Such practices are consistent with recent research on effective undergraduate education in psychology (Halpern, 2010), and their adoption stands to benefit not only students abroad but international and domestic students studying in the United States as well.

Learning Outcomes

Critics of MOOCs note that course completion rates are very low, and that it is hard to assess the learning that takes place. Of the estimated 33,000 to 43,000 students who enroll in an average-size MOOC, only 60% or so of students return to the course when it begins, and only 6% to 10% complete the course, depending on how the completion rate is defined (Jordan, 2014)—making a 90% to 94% incompletion rate a source of concern for educators. In response to these criticisms, MOOC supporters argue that course completion rates are the wrong metric to measure educational success. In the words of the founders of Coursera, "the goal of education is to provide students with the skills they need to achieve their own life goals, not to retain individuals in a classroom" (Koller, Ng, Do, & Chen, 2013, p. 1).

Outcome studies comparing online and traditional learning have shown promising results. For instance, one study found that when an electrical engineering course incorporated content from an edX Circuits and Electronics MOOC, the percentage of students passing the course went from as little as 55% to 91% (Fowler, 2013). An especially encouraging result was reported by University of Texas researchers who compared the effectiveness of an online version of introductory psychology with a traditional version (Pennebaker, Gosling, & Ferrell, 2013). Not only did psychology exam scores increase by approximately half a letter grade when the course was taught online—the socioeconomic achievement gap in course grades was cut in half.

How effective are MOOCs or other new technologies in internationalizing undergraduate education in developing regions? Current opinions are divided. On the positive side, educators such as David Myers (2009) foresee how new technologies can segue into a "pedagogical utopia," in which "web-based e-books may deliver state-of-the-art, interactive, low-cost, locally adapted content to students who cannot afford books" (p. 99). On the negative side, Kentaro Toyama (2015), from his experience with undergraduates in India, concluded that "the primary effect of free online courses is to further educate an already well-educated group who will pull away from less-educated others. The educational rich just get richer." The long-term impact of MOOCs is clearly an open question awaiting empirical study.

Internet-Based Technologies

In addition to MOOCs, various Internet-based technologies and systems—such as Twitter, Facebook, blogs, wikis, Skype, videoconferencing, podcasts, YouTube, and virtual worlds—are revolutionizing how disciplines internationalize their undergraduate programs and curricula (Velayo, 2010; Velayo & Trush, 2012). Through such web-based systems, instructors in different nations can work together, often in real time, on joint activities. Undergraduates are generally well-acquainted with these sites and technologies (at times, more so than faculty), and their thoughtful use is valuable in guiding education, supplementing lessons, improving research and collaboration, and pursuing the larger goal of IoC (Velayo, Oliva, & Blank, 2008). Moreover, Moodle, Blackboard and other online teaching platforms can facilitate a web-enhanced class, which enables students from different institutions across the world to interact in real time. Such technology is now commonplace in most schools in the United States and other nations.

Internet-based technologies are increasingly popular to incorporate international content into the psychology curriculum (Grenwald, Oberlechner, & Velayo, 2012; Grenwald & Velayo, 2011; Velayo, 2012). One key reason is cost-effectiveness—especially for community college and other students with family, work, or financial limitations

(Guerin, 2009). The Internet offers interaction with people from other cultures and countries, journal articles written by individuals from diverse backgrounds, and countless opportunities for cross-cultural collaboration—all at little cost.

Social media refer to Internet-based technologies that enable users to interact by sharing information, ideas, images, or videos. Facebook, YouTube, Twitter, blogs, and wikis are among the most common social media platforms used to enhance collaboration and share knowledge among learners from different parts of world. Social media exemplars in internationalizing undergraduate education include virtual psychology labs (e.g., Gao & Wang, 2010), international mentoring (Stevens & Wedding, 2009), and collaborative online research with participants across nations. One example of a popular virtual lab is APA's Online Psychology Laboratory (http://apaonlineacademy.bizvision.com/), with almost a million views per year.

Another way that Internet-based technologies incorporate international content is through the sharing of materials. It is increasingly easy to share material with peers or colleagues and work collaboratively. Many instructors now use social networks and videoconferencing to participate in lecture exchanges (e.g., Longview Foundation for Education in World Affairs and International Understanding; www.longviewfdn.org). Internet-based technologies can also help supplement textbooks which may lack international content, with articles from international journals to supplement the texts.

There are also many content-based resources that provide information for undergraduate instructors who wish to infuse international content in their courses (Velayo, Grenwald, & Manfred, 2012). Probably the most comprehensive collection of psychology resources focused specifically on internationalization are Psychology Resources Around the World (http://resources.iupsys.net/iupsys/index.php/patw-resources) and International Teaching of Psychology Network (http://interteachpsy.org/). Instructors can help update these and other sites by contributing resources as well as reviewing the materials. Just as emerging technologies are transforming undergraduate education in general, these technologies promise to be a valuable centripetal force to reduce barriers to global education.

14 Recommendations to Support the Internationalization of Undergraduate Psychology

Internationalizing undergraduate psychology is an ambitious but highly desirable goal that needs the concerted efforts of students, faculty, departments, and educational institutions. Institutions must help create the right educational atmosphere as well as provide the necessary organizational support and financial incentives to enable faculty and departments to engage in the necessary efforts. Departments must see internationalization as an overarching goal that cuts across the curriculum. Faculty members must see themselves as eager learners who consider the internationalization of their own courses and research efforts a challenging but rewarding task. Finally, although students may at first be reluctant to leave their comfort zone to gain international experience, once they do they can expect to grow intellectually, emotionally, socially, and perhaps spiritually. Some of them will find their life's calling precisely by seeing themselves in new and surprising situations, whereas others will see their career options enlarged in a world shaped by the forces of globalization.

How timely, then, that the *APA Guidelines 2.0's* (APA, 2013) third goal of "Ethical and social responsibility in a diverse world" can help guide individual faculty, students, and educational institutions to develop an international outlook and acquire the necessary skills to cross cultural borders. To make this broad goal more specific, we offer 14 suggestions that address three levels—undergraduate students, faculty, and institutions.

Undergraduate Students

1. Cross-national research. Because most undergraduate curricula mandate a research experience, why not a cross-national one? A student guide (Shvets, 2007) offered six reasons for students to collaborate in cross-national research and four low-cost ways to do so. For one example, without funding, a researcher completed an extensive field experiment on prosocial behavior, comparing 36 U.S. cities and 23 nations, by training student tourists who valued this chance to get research experience (Levine, 2003).

2. Study/work abroad. The numerous U.S. students studying abroad do so typically for one summer, semester, or full year, through one of the increasing number of study abroad programs (Soto, 2014). In addition, "work abroad" programs (such as teaching English) offer income along with cultural immersion (Murray, 2005). Such study abroad programs offer ideal opportunities to conduct cross-national research and to create personal contacts for future collaborative research projects.

3. Conferences. One simple yet valuable international experience is for undergraduates to attend one of the many global psychology or education conference each year, most of which offer a reduced fee for students. Moreover, many conferences now allow undergraduate and graduate students to present posters, thereby reinforcing the challenges and excitement to conduct and present cross-cultural research.

4. Organizations. Undergraduates can benefit from joining an international organization as student members (Takooshian & Stambaugh, 2007)—be this a large group (such as the International Association of Applied Psychology or the International Association of Cross-Cultural Psychology) or one of the 100 smaller specialty groups, such as forensic or school psychology (Bullock, 2012a).

5. Funding. There are at least 50 major sources of funding for student and faculty international activities—such as Boren, Coro, and Open Society. In fact, one analysis found that "funding for international activities has risen sharply since the 1990s, now accounting for 15% of all foundation-grant dollars . . . as more U.S. foundations are 'going global,' up from 46% in 1994 to 63% in 2001" (Takooshian & Takooshian, 2012, p. 54). Students frequently report profound experiences after completing a Fulbright or similar program (Zoma et al., 2012).

6. Internships. Whether for credit or not, students can seek multicultural field placements as part of their undergraduate degree. Most cities have multicultural service centers that can offer a psychology placement, such as Los Angeles' Institute for Multicultural Education and Services. In New York City, the United Nations offers an increasing number of internships (Takooshian & Campano, 2008), participation in Model U.N. sessions, and other international experiences for undergraduates (Roberts, 2014). Many internships provide students with the opportunity to interact with children and/or adults of numerous immigrant backgrounds that can prepare them for subsequent international experiences.

Faculty

The revised version of the *APA Guidelines 2.0* (APA, 2016) seeks to infuse "sociocultural learning outcomes" across the major, rather than in a separate course to produce "global psychological literacy" (Cranney & Dunn, 2011). Individual faculty can do much to adapt their existing courses, develop new ones, experiment with new technologies in the classroom, and participate in cocurricular activities outside the classroom (Velayo, 2016).

7. Syllabi. Faculty may integrate into their current courses more research based on non-U.S. participants or by non-U.S. authors (Woolf, Hulsizer, & McCarthy, 2002). One volume offers a dozen practical chapters on how to integrate cross-cultural work into traditional courses such as developmental, social, personality, and health psychology, as well as 52 ways to internationalize the psychology curriculum (Leong, Pickren, Leach, & Marsella, 2012). An increasing number of cross-cultural textbooks are appearing for teachers of these courses (e.g., Gielen & Roopnarine, 2016). One offers "111 experiences for multicultural learning" inside the classroom (Pedersen, 2004).

8. Courses. Some faculty might develop a new course, using one of the many textbooks available for international (Eysenck, 2004) and cross-cultural psychology (Shiraev & Levy, 2012). The APA Society for Teaching of Psychology offers a variety of model syllabi in its Project Syllabus. Faculty can tap the IUPsyS resource center (cf. Stevens & Wedding, 2006), the nine volumes on international psychology (in Baker, 2012), or any of a dozen cross-cultural psychology periodicals, such as the *International Journal of Psychology* or the *Journal of Cross-Cultural Psychology* (Simonian, 2014).

9. Remote courses. In addition to MOOCs and other online and other distance-learning courses (Velayo, 2011), faculty may now use Skype, Polycom, or similar technologies to offer simultaneous cross-national courses (Chia & Poe, 2004).

10. Cocurricular activities. Over 1,300 U.S. undergraduate institutions have a chapter of Psi Chi or Psi Beta (for community colleges), which commonly offer cocurricular activities that complement classroom learning (McCormick et al., 2014). These include international activities such as lectures or workshops by international travelers, programs focused on global topics, and using Skype to hold shared sessions between American and overseas chapters of Psi Chi.

Departments and Institutions

11. Institutes for international and cross-cultural psychology. An institute focused on global psychology can broaden the curricular offerings of psychology programs, involve undergraduate students in international research and other internationally oriented activities, and broaden their horizons. An example of such a center at a predominantly undergraduate institution is the Institute for International and Cross-Cultural Psychology at St. Francis College, New York (www.iiccp.org).

12. International activities on campus. In order to promote international activities on campus, a school may foster creative collaborations among existing campus groups: the psychology department, offices for international students and study abroad (Roberts, 2014), and the Psi Beta or Psi Chi chapter (Russo & Takooshian, 2002). Such activities might include lecture series, interdisciplinary workshops for students, receptions, awards, faculty development workshops, or press releases highlighting global work.

13. Fulbrights and faculty abroad. Schools would do well to encourage and support faculty who consider applying for Fulbrights to do research or teach overseas. Since 1946, over 110,000 faculty have served as U.S. Fulbright Scholars overseas, often with life-changing experiences (Takooshian et al., 2011). In addition, over 183,000 international faculty members have served in the United States. There are a growing number of overseas programs besides Fulbright. Over 1 million "alumni" and "alumnae" have been funded by one of the dozens of other U.S. State Department programs—such as the Humphrey, Gilman, and UGRAD programs (Barton, 2013). Over 7,500 psychologists have directly benefitted from one of these programs (Takooshian, 2013).

14. Administrative support. Ask deans, directors, provosts, and other administrators to support programs and events that internationalize psychology education. When feasible, familiarize administrators can also familiarize themselves with resources to internationalize the school's curricula (IoC, in Leask, 2015), or Internationalize at Home (in Barker & Mak, 2013). Because educational institutions are frequently under pressure to internationalize their offerings, administrators may be willing to provide organizational, financial, and moral support for this effort.

Concluding Comments

Contemporary undergraduate psychology education in the United States is being powerfully affected by at least two forces: the sharp growth of psychology outside its borders and the emergence of new technologies in the classroom. Separate but parallel efforts are underway—*APA Guidelines 2.0* (APA, 2016) in the United States, and the EuroPsy "tuning process" in Europe—to encourage greater cultural diversity in undergraduate education, as psychologists around the world seek to develop educational practices that reflect a cross-national science of behavior. These efforts are supported by the sustained commitment of APA to further the goals of internationalization, and the dedicated efforts of faculty members and other psychologists both in the United States and abroad, to get their psychology undergraduates ready for the future.

What will this future look like, and how can we best prepare our students for it? *APA Guidelines 2.0* (APA, 2016) emphasizes that our undergraduates today are entering an ever more diverse and multicultural world. As noted by the past CEO of APA, Raymond Fowler (2000, p. 11), "new psychologists who do not have the benefit of a sophisticated orientation to international issues will be severely handicapped in their career options." Psychology undergraduates must develop *global psychological literacy*—to think in broad international terms, communicate across cultural borders, integrate multiple identities in themselves, and support others in their efforts to achieve goals that are in part culturally shaped. Our recommendations are intended to help psychology undergraduates and faculty to prepare for a "glocal" world—that is, a world that is simultaneously global and local in nature.

INTERNATIONAL UNDERSTANDING

an ICP, Inc. publication

Part B: International Psychologist IP 56.2 Edition

Dr. Ann Marie O'Roark, Editor

St. Augustine, Florida. June 2016.

IP56.2 Part B: INTERNATIONAL UNDERSTANDING is dedicated to Ludwig Frederick Lowenstein, PhD., ICP, Inc. President 2011-2013. Ever the optimistic motivator, Dr. Lowenstein contributed the most articles for the INTERNATIONAL UNDERSTANDING, ICP, Inc.'s informal journal that encourages students and professionals from all nations who are new to the international association community opportunities to begin publishing in English.

Ludwig became an ICP, Inc. member in 1977. He organized two annual conferences in England and led the Forensic Research Interest Group in presenting symposia at each scientific conference. He attended the Paris conference, but could not attend Toronto last year. He planned a presentation for Yokohama, and it is hard for me to imagine ICP conferences without his presence. His lovely wife Kathleen and devoted partner in his lifework and his ICP, Inc. work, notified us of his peaceful passing on April 9, 2016.

On the next page you will read some messages to Kathleen, sent by ICP friends around the world.

April 10, 2016
Dear ICP, Inc. Colleagues
With heavy heart, I forward this message [about the passing of Ludwig Lowensterin on April 9] from Kathleen Lowenstein.
We will dearly miss ICP's gallant and ever-optimistic *man of energy and empathy*, of independent thought and interesting work, of good cheer and good writings.Ave etque Vale Ann Marie O'Roark [USA]

Dear Kathleen
I am sorry to find out about Ludwig's death. I have fond memories of him. My condolences,
Varda Muhlbauer [Israel]

Dear Kathleen, I am honored and blessed to have known Dr Lowenstein. My most heartfelt condolences to you and your family. Warmest regards, Cecilia [Cheng] [Hong Kong]

Ann, thanks for sharing the sad news of Ludwig's passing on April 9.
Do you think IP will be collecting memories of Ludwig? I have a good photo or two.
In Paris, Ludwig + I were surprised that we graduated there same NYC high school,
but slightly different years.
Harold Takooshian, PhD Fordham University, New York NY 10023, USA

Dear Kathleen:
It was a great sorrow to me to learn of Dr.Ludwig Lowenstein's passing away.
I would like to express my sincere condolence on this sad event. From bottom of my heart, I have appreciated Ludwig's long-term friendship and encouragement given to me: I will miss him in Japan, while he has been eager to prepare for the Conference. He will be remembered in my heart. I hope Kathleen will take care in this grief situation.
With deepest sympathy, Machiko Fukuhara [Japan]

Ann Marie, Thank you very much for your letting me know of Ludwig's passing away. With deep sympathy, I pray for the repose of late Ludwig Lowenstein. I hope my message has arrived to Kathleen. I have a thought that at the opportunity of 74th ICP,Inc.Conference Yokohama, we will have a ceremony in memory of Ludwig. Looking at a tentative program, there is a paper session prepared for him, 11:30a.m.-12:00m. on July 23. It might be an appropriate time to do it. Machiko Fukuhara [Japan]

Dear ICP colleagues
Our hearts go out to Ludwig's family. He was such a wonderful gentleman and was a loyal ICP member and friend. He will be missed.
Best,
Janet [Sigal] Sent from my iPad [USA]

Dear Kathleen, I'm so sorry to hear about Ludwig. I knew him for many years, and always found him to be a wonderful person, a great leader, and a dear friend. He loved you very much. I remember the time he and my husband Bob both compared notes on "what wonderful wives they had." I will always remember him and all that he meant to ICP.
With deepest sympathy, Florence Denmark

Dear Kathleen, I think of Ludwig as an ICP icon over the many years met annually in so many conferences all over the globe. My wife and I remember his cheerful friendliness and kindness.Saddened and heartfelt condolences for your loss but he will always live on as one of the greats of ICP. Chok Hiew [Canada]

Dear Kathleen,
With deepest sympathy, I share your sorrow of Ludwig's passing.
This very difficult time must include meaningful memories. I always remember Ludwig's admiration of you as a unique, supportive partner in life. His legacy remains as an optimistic, engaging communicator.
Long live you and Ludwig's legacy.

An Idea: At the deepest sorrow about Ludwig's passing, it made me think of reversing our usual tradition of honoring people after they pass. I think it would have been so meaningful for Ludwig to have heard the wonderful words of acknowledgement that were expressed by our members when he was with us, especially as he was challenged by illness and suffering toward the end of his life.
Inspired by Ludwig and others who recently passed away, I propose to develop a new tradition of honoring and acknowledging our ICP colleagues/members during their life with us. I believe end of life on this Earth is inevitable, regardless of age and other factors. I would like to propose that we dedicate a section in our IP based on some order (alphabetical or other) to recognize and acknowledge our members/colleagues' participation/contributions by asking everyone for statements about them. We/ICP would also put these together as a nice presentable letter to the individual and keep a copy for our archive.
Please let me know what you think.
Warm regards,
Tara [Pir] [USA]

Con't from page 2

~Dear Tara, I like your idea very much. Donna [Goetz] [USA]
~A wonderful idea Tara and thanks to the wonderful man that inspired it and who will remain a part of us forever. Consuelo [Barreda-Hansen, PhD. Australia]
~I will be happy to initiate the process. Love, Florence [Denmark, USA]

Dearest Kathleen, We are so very sad to learn of Ludwig's death. He meant so much to Bob and me , friend, companion, lover of life, a man much greater than most, above all always loyal to us from the 1980s onwards.I would like to write an obituary for him. As you know Kathleen I was writing the introduction and Practice notes to his second book "Surviving in Families" after his first book, "Parental Alienation". I will continue that with your permission. I will write to you when I can have my mind less frazzled by his loss.
With condolences and love, Sandra and Bob.
Dr. Sandra E. Neil, FAPS [Australia]

Dear Kathleen and ICP family..
Ludwig lives on through all the lives he touched and directed to brighter paths and in our hearts, always. How fortunate we all are that his gallantry graced our lives...
Sherri
Dr. Sherri McCarthy, Ph.D [USA]

Dear Kathleen, I join other colleagues members of the ICP to give you our heartfelt condolences. A kiss! Ana Guil, PhD. [SPAIN]

Dear Kathleen,
Please accept my sincere condolences. Ann Marie could not have said it better; we will always remember dear Ludwig as " *ICP's gallant and ever-optimistic man of energy and empathy, of independent thought and interesting work, of good cheer and good writings*."
In sympathy, Joy Rice [USA]

Dear Friends and Fellow ICP Members,
Thank you so much for your tributes to Ludwig in the current IP. They are appreciated and welcomed by myself and his family. I will indeed include them in our tribute book to him when we have a memorial service for him on 9th July 2016. I am only sorry that I cannot extend an invitation to you all as you are all so far away.
I would wish President Sigal to give my apologies to the Board and to Machiko for not being able to attend this year's conference in Japan. Ludwig and I were so looking forward to it, especially as we missed the last conference in Japan also. I still have a commitment to my mother now aged 92 which Ludwig and I took on 2 years ago.

I would also like to take this opportunity to thank you for the gift of flowers that you so kindly sent to me on behalf of ICP. I should have sent my thanks long ago and for this I apologise to you all. There is a memorial tribute to Ludwig on the British Psychological Society's website which you may like to view. The link is https://thepsychologist.bps.org.uk/dr-l-f-lowenstein-1928-2016
All best wishes to you all for a successful conference.
Kathleen [England]

Please send your favorite story about Ludwig to Florence Denmark for the MEMORY BOOK:

Long Ago and far away vs Today and yesterday

The INTERNATIONAL UNDERSTANDING, IP56.2, Spring-Summer 2016, opens with the article Ludwig Lowenstein sent titled, "What is there to know about memory." This is a technical and cognitive review of the two types of individual's memories: short term and long term. Ludwig extrapolates from physical functionings of the brain to current cognitive disabilities, dementia, Alzheimer's, verbal fluency and executive functioning and problems such as depression and false childhood memories of abuse. The second article is an excerpt from a chapter I prepared for an African book, here titled: The Editing of Who-I-Am. It is included as a compliment to my colleague Ludwig with whom I held numerous dialogues about self concept. This review of over 100 years of thinking about self concept pays special attention to the importance of self concept maintenance in later years of life and of finding ways to link the global sets of "self ways." The first section concludes with Anna Laura Comunian's presentation about differences and similarities in human values across cultures, about the emic and etic dimensions, and about conducting scientific research into the values phenomena, which some consider the heart of the self concept and a key cohesive factor in memory stability.

The Future: Students, Sustainabilities, and Longitudinal Milestones

The next set of articles begin with the Velayo, Forti, Ghahghahi, Javani and Siddiqui paper illustrating how next generation psychologists are taking advantage of technology to examine a variety of scientific psychology's mysteries in an international context while infusing the curriculum with the value of conducting international research [e.g., mood disorders, depressive rumination, facilitating international communications about leadership]. The next paper is from Dr. Roswith Roth about UN NGOs and securing a sustainable future, about working toward shared ideals, shared values and shared futures. She also notes the70th year of NGOs being associated with the UN, and the 60th Session of the Commission on the Status of Women. Florence Denmark presents her 2016 UN ICP report summarizing the varied activities of the members of the ICP, Inc. UN NGO and DPI representatives for the year.

Special Books

The third section includes two book reviews. First, Dr, Sandra Neil describes a pair of books that enable development of a therapeutic deradicalizing method for assisting terrorists to adjust perspective and behavior patterns. The first book is by ICP, Inc. member Roseline Davido of Paris: *The Davido-CHaD in Practice: A clinical and projective personality test.* The second is by another ICP, Inc. member, Sarlito Sarwono of Jakarta, *Indonesian Terrorists in Psychoanalytical Perspectives.* Neil concludes that "Overall, these two books are convincing…."

Dr. Judy Kuriansky submits a review of "The Psychosocial Issues in Ebola: From the Psychology Coalition forum to Boots on the Ground" to an anthology chronicling the Psychosocial issues. She sees relevance to the contemporary concerns about a potential Zika epidemic. Fear, stigma and discrimination are key aspects of these world health emergencies.

THE 2016 BOARD ELECTION BALLOT

Dr. Tara Pir is presenting the 2016 Board Election in two Components. The first set of nominees will be for the Board Secretary and Directors At Large: 2 seats open for Professionals and 2 seats open for Graduate Student Representatives.

With Warm Regards

Ann Marie O'Roark, PhD, ABAP

WHAT IS THERE TO KNOW ABOUT MEMORY

Ludwig F. Lowenstein, Ph. D.
Past-President
Southern England Psychological Services, UK

Abstract

The memories that individuals possess are based on both short and long-term memory. Certain parts of the brain interacting with one another are responsible for memory. As we are currently living longer there is likely to be an increase in memory problems leading to cognitive disabilities and frequently dementia and Alzheimer's disease. Due to the process of ageing firstly the immediate or working memory suffers and this is followed by deterioration of long-term memory. Older people also suffer from lack of verbal fluency and executive functioning. Psychological problems such as depression are likely to interfere with memory functioning. Amnestic disorders are briefly discussed along with depression and false childhood memories of abuse.

What is there to know about memory?
(The past and recent research)

The picture of the brain which follows will be discussed in some detail.

Courtesy of Abnormal Psychology (2007) Edited by R. Cromer

Fig. 1 Parts of the Brain

Memory is affected by a number of events such as traumatic psychological problems and of course through the process of ageing. It occurs in dementia and Alzheimer disease. It has been estimated that 25% of the population over 85 will suffer from cognitive disabilities, especially a deterioration in memory (Itua & Naderali, 2010). This is especially illustrated by the increase of the aged due to better care received.

Two forms of memory have been identified: short-term or working memory and long-term memory. New information is gathered via short term memory, but it can only be retained when it is transferred into long term memory. It can be retrieved or remembered. It has been noted that music, somantic memory and other types appear to be preserved in a moderate form of Alzheimer's disease (Cuddy et al., 2012).Particular parts of the brain are involved in the obtaining of working memory. They are the pre-frontal lobes, just behind the forehead (Jiang et al., 2000). Other areas important in the gathering of information by short-term memory are the temporal including the hippocampus and amygdala. Also important structures dealing with short-term memory are the diencephalon including the mammillary bodies, the thalamus and the hypothalamus. These structures transfer the short-term memory into long-term retained memory. (Please see Fig. 1 as to where these structures reside).

As a result of the aging process these areas are sometimes damaged (Van der Flier et al., 2005).

The aging process and memory loss

Genoe & Dupuis (2014) noted the importance for the elderly suffering from dementia being unable to retain their memory better. It is important and helpful for the elderly to be engaged in meaningful activities such as work and having good relationships with others. When there is increased working memory demand difficulties will increase eventually being unable to remember sentences (Gross et al, 2012). Patients attending memory clinics were found to benefit as measured via the Cornell Scale for Depression and Dementia (Hancock & Larner, 2015; Knapskog, 2014).

Jones et al., (2015) considers that many aged individuals begin to suffer from dementia. They frequently forget their medical condition and the medication they require to deal with it. Of 99 patients interviewed only 22% were able to remember the names of the medications they were using. Only 34% understood their medical condition. Only 49% remembered the number of drugs they were taking (Kohler et al., 2013).

Con't from page 5

It was also found in a Dutch study that when individuals aged they increasingly suffered from deterioration in immediate and delayed memory recall, and delayed recognition and information processing speed. They also suffered from lack of verbal fluency and executive functioning. Other deficits in some cases included the impaired ability to recognise faces due to neurodegeneration (Kumfor et al., 2015).

It was also noted that those individuals who attended a memory clinic alone and not with a caregiver or friend were found to be cognitively healthier with an absence of dementia in many cases (Larner, 2014). Those suspected of suffering from dementia were likely to over-estimate their memory and were unaware of their deficits (Lindquist et al., 2014). This included their deficits in memory (Lin et al., 2010).

The elderly whose memory has been thus affected appear to have the ability to discriminate between memories recalled and not recalled (Mammarella et al., 2012). It has also been proposed their needs to be an observation of memory functioning over a period of time in order to note deterioration occurring (Persoon et al., 2011).

Working or immediate memory is often affected in Alzheimer's disease. This is often termed 'central executive impairment' due to the lack of frontal lobe functioning (Stopford et al., 2012). This is not the case in all instances. The dysfunction appears to be in the posterior hemisphere and not the frontal lobes. A study by Terry et al (2013) suggests that the personality of aging individuals is a strong predictor of memory functioning. Other factors where the age, gender and the estimated premorbid IQ and symptoms of depression (neuroticism of the 5-factor model). Openness is associated with better memory functioning. Tsang et al. (2013) also found that depression is associated with memory impairment.

It has also been found that chemical factors, especially biochemical changes, affect memory. Acetylocholine glutamate (RNA, ribonucleic acid) and calcium are responsible for the formation of memory-linked proteins. The improper secretion of proteins may be prevented interfering with the developing of memories (Wu et al., 2008) especially short-term memories. It is the same case when there is a blocking of cellular production of the RNA (ribonucleic acid) or of calcium., There could also be failure to develop long-term memories in that case (Berridge, 2011). Such abnormal development can lead to Alzheimer's disease.

There are also substances found in nature that can act as toxins and damage the brain leading to Alzheimer's disease. This is especially when there are high levels of zinc in the brain (Schrag. 2011). The same can be said about the toxin lead (Ritter, 2008). As a result of petrol being unleaded in 1976 and 1991 there was a reduction of lead by 80% in the blood. In the 1960s and 1970s, there was destruction of the neurons due to inhalation of pollutions. These toxins came from automobile exhaust. This is likely to have affected the cognitive ability of those who constitute the elderly population today (Ritter, 2008). The absorption of lead was measured by assessing the shin bone of the elderly (Schwartz & Stewart, 2007). There appears to be direct effect on the memory and language tests. Symptoms presented such as forgetfulness occur due to the destruction of brain cells many years after the pollutant has been absorbed (Landrigan, 2007).

Another aspect affecting the brain cells is the immune system. This occurs when the immune system response occurs acting upon itself (Zipp & Aktas, 2006). The viral theory states that a virus is slow acting much as in the Kreutzfeldt Jakob disease. This leads to the Alzheimer condition and this leads to a deterioration of memory. It can be measured via the Memory for Names Test (Brouillette et al., 2011). Another test for memory is Memory Orientation and Screening Test (MOST) by Clionsky & Clionsky (2010).

A rarely occurring disease is Pick's Disease which affects the frontal and temporal lobes. This is due to a slow acting virus which lives in the body, often for many years. Genetic factors often play a role as illustrated by Huntington's disease which is progressive and affects both the memory and personality via unexplained mood changes. There is also a 50% chance that those suffering with this condition may in 50% of cases develop Parkinson's disease with such symptoms as twitching, spasms, rigidity, and being unsteady on their feet.

Amnestic disorders

Amnestic disorders occur as a result of a brain disease due to direct injuries to the brain (Bigler, 2009). This disorder develops in both young an older people when they are injured due to head trauma (King & Kirwilliam, 2011).

Half of the more severe head injuries result both in learning problems as well as memory deficits. Such deficits mainly occur due to car accidents and falls. This affects both the anterograde and the retrograde memory. We will define each of these now:

1. Retrograde amnesia – this occurs in the inability to remember what has happened in the past.
2. Anterograde amnesia – this occurs when an individual is unable to form or hold on to new memories. This results in individuals being unable to allow short-term

Continued next page

Con't from page 6

memories to develop into long-term memories. Thereby the individual forgets all recent events and forgets all that has occurred it being immediately forgotten. The IQ however, remains unchanged. In severe cases individuals they have met, including their names, are immediately forgotten.

The effect of dissociative disorder on memory

Under normal circumstances most individuals have a sense of who they are, that is, their identity. We have our own expectations, values and goals. We are aware of past, present and likely future. Our past experience influences our present events, helping us to make decision now and in the future. Memory helps one to remember individuals with whom we have, and will continue, to interact. When we fail to remember what has gone on before, and new information just learned, we may suffer from a dissociative disorder. This occurs when one part of the individual's memory is dissociated or separated from the rest resulting in the inability to remember personal events and information. Anyone with this affliction forgets the past and travels to a new location and even assumes a new identity. This condition is also called "multiple personality disorder" whereby the person has two or more separate identities that are not necessarily known to each other. Such problems are rare. It can also be called a "deep personalization disorder" (Brockmeier, 2014).

Such individuals may see themselves from outside as they have become "detached" from their own mental processes or body. Their own bodies feel unreal. They are suffering from "dissociative amnesia", often termed "dissociative fugue or "dissociative personality disorder". This is caused by the individual experiencing a traumatic event leading to confusion and shock and an inability to recall traumatic events or information from the past (Kikuchi, et al., 2010). They can however remember what occurred before the traumatic event leading to this selective amnesia. It could lead to the individual failing to recognise even family and friends he/she has known for many years.

Depressed or false childhood memories

This is another form of memory loss which is somewhat in dispute. In the 1990s there were reports that memories from childhood concerning physical and sexual abuse of children have been recovered. Memories were recovered while undergoing therapy. The manner in which these buried memories were obtained came into dispute. There were those who claimed that these "memories" were not memories at all. They had been inculcated or induced by therapy (Balash et al., 2013) were the repercussions of such earlier forgotten abusive events. Other experts argued against such assertions (Birrell, 2011; Haaken & Reavey, 2010). A dispute arose between those who believed these memories were real and true and those who did not believe this. Loftus & Cahill, (2007) believed such real abuse is only too well remembered without therapy and is unlikely to be repressed and not remembered. Finally, many believed that past memories are often not based on real events (Haaken &Reavey, 2010). The results, according to Loftus & Cahill (2007) came from such individuals being suggestive personalities and the therapists inducing these non-existent memories on their clients.

In recent times efforts have been made to develop better memory or prevent further deterioration of memory. One such approach has been Cognitive Training Intervention (Materne et al., 2014; Creighton et al., 2013). Fiksdal et al. (2012), found that memory enhancement procedures known as "spaced retrieval" help an individual in early stages of dementia to retain meaningful information learned.

Memory club support groups also help individuals with memory loss (Gaugler et al., 2011). Other ways to enhance memory and reduce speed of deterioration is to stimulate cognitive ability via such strategies as crossword puzzles (Pillai et al., 2011). When one member of a couple suffers from memory loss and the other does not then much help can be provided by the person who has not suffered such loss.

THE EDITING OF WHO-I-AM

Ann Marie O'Roark, PhD

From birth to death each of us strives for maximum organization and integration of experience and information, always directed toward four goals: survival, adequacy, growth, and meaningfulness (Gordon, 1962; Combs, Miser, Whitaker, 1999; O'Roark, 2000). Survival and growth depend on a continuous editing of the self and its awareness of who-I-am. Accurate updating efforts result in more effective strategic mapping-and-selection of behavioral options and choices.

Neisser & Jopling conclude that self-concept is conceptualized in many different ways across cultures, that there exists a wide variability in how individuals experience their self, and that, at times, there is noticeable disjunction between self-concept and self. Should other scholars and researchers offer overwhelming support for these hypotheses, we are not at the mercy of postmodernism or nihilistic existentialism. Quite to the contrary, such evidence may culminate in

1. increased respect for self, others and work tasks,
2. increased openness to learning and conscious editing of the self-concept in healthy, productive directions across the life span, and,
3. increased understanding of cross-cultural differences, interpersonal conflicts, mental health and dysfunctional behavior.

THE EDITING OF THE SELF-CONCEPT: WHO-I-AM

The *who* function of self-concept provides a mirrored reflection of *who-I-am in this place at this time*. This collage of nouns and adjectives is organised, dynamic, and has positive and/or negative valence (Purkey, 1970). According to some self-concept theorists, the self-view is the key to understanding the multitude of puzzling behaviors displayed by a single person. Therefore, these researchers propose the self-concept, defined as the view or perception an individual holds of him/herself, as the most important single human attribute.

OVER 100 YEARS OF THINKING ABOUT SELF-CONCEPT

Such pre-eminence for *self-concept* as delimited in the definition above is not universally proclaimed. A blizzard of *self* words emerged in the more than 100 years of psychological attention to the nature and function of a sense of *self*. James (1890) was first to note that the self is multifaceted. He maintained that the self has two primary dimensions - a *spiritual self* and a *social self*. The *spiritual self*, a likely ancestor of the current personal *private self*, was described as the inner, subjective being and included a person's dispositions. This manifested self works as the control center of perception and behavior and determines whether experiences are welcomed or rejected. James (1890) postulated that the *social self* is in charge of recognition of others and determining how to respond to other people. The social self has the ability to behave in diverse ways, responding to each person or clusters of people as deemed appropriate. James was the first to describe the self and its constituents, the connections between self and feelings, and the actions of self-seeking and self-preservation.

The term *self* has come to have two distinct meanings, namely:

1. A person's attitudes and feelings about her/himself (who), and
2. a group of psychological processes which govern behavior and adjustment (how).

The second is known as the *self-as-process*, and the first is typically referred to as the *self-as-object*. Each meaning has been elaborated in theory and empirical study, but no scientific school of thought holds that there is a spiritual or psychic agent, an 'inner manikin', a soul or an independent *homunculus*, i.e., 'a [person] man within the breast' (Hall & Lindsey, 1970).

Continued next page

Con't from page 9

In 1935 Koffka elaborated on and extended the notion of the *self-as-object* as a knowable collection of conscious experiences that constitute the *phenomenal ego*. He conceptualized the ego as a doer as well as an object and hypothesized these functions as tension systems that interact with the environment. Koffka was the first to introduce the *executive* aspect of the self as a controller of behavior which is separate from the ego, that powerful concept developed by Freud, which continues to imprint thinking about the self (Hall, 1954). Koffka placed the *self* at the core or nucleus of the *ego,* referencing the concept to a basic science model. Erickson (1947), on the other hand, reserved the word *self* for the *object* aspect and used ego to refer to the central, organizing agent. Erickson's developmental model proceeds to track ego development through eight stages of priorities found to characterize the life span (Hall & Lindsey, 1970).

Allport (1943) gathered up all the meanings of ego and self into the term *propriate function.* Under this rubric he discussed bodily sense, self-identity, self-esteem, self-extension, sense of selfhood, rational thinking, self-image, propriate striving, cognitive style and the function of knowing. Sullivan (1953) considered the self to be a dynamism, the smallest unit and enduring pattern of energy transformation which recurrently characterize the organism in its duration as a living entity. He hypothesized that the dynamism develops as a result of anxiety and refers to that pattern of energy as the self or the self system. Buhler (1962) introduced the phenomenal self as all self-perceptions and self-concepts. She considered the core self to include life's basic processes, need satisfactions, adaptation, creative expansion, and internal order (Hall & Lindsey, 1970).

At the turn of the twentieth century, Jung (1921, 1971) described the self as equivalent to the *psyche* or *total personality*. For Jung, self is the mid-point of personality around which all of the other systems are constellated while it provides unity, equilibrium, and stability. Later on, Adler (1956) proposed the *self* as a personalized subjective system which interprets and makes meaningful the experiences of the organism. He introduced the notion that the self also searches for experiences that will end in fulfilling the person's unique style of life. He went on to say that if the necessary experiences were not found in the world about that individual, the self tries to create them, hence his introduction of the *creative self*. He wrote about the consequences of being *self- conscious*, which he concluded made one capable of planning and guiding actions toward *self-realization*. The motivation substrata of the self soon became a central research interest.

Maslow (1967) stated his now classic heuristic model of self that tracked his concept of an inner nature pressing for actualization. Depending on an individual's access to survival essentials (food, water, shelter), the self's motivational attention moves beyond basic security to belonging and culminates in full realization of individual human potentialities. Maslow later added a final motivational impetus - appreciation of others.

Rogers (1959) elaborated on Maslow's thinking, writing that the self or self-concept denotes an 'organized, consistent conceptual gestalt composed of perceptions of the characteristics of the ***I*** or ***me*** and the perceptions of the relationships of the *I* or the *me* to others and to various aspects of life, together with the values attached to these perceptions. It is a gestalt that is available to awareness, though not necessarily in awareness. It is a fluid and changing gestalt, a process, but at any given moment it is a specific entity' (1959, p.200). Rogers' definition of self-concept reveals a clear and striking similarity to quantum physicists' descriptions of an electron's two manifestations - *particle* and *wave*.

USING SELF-CONCEPT AS A THERAPEUTIC CONSTRUCT

Rogers (1959) became most interested in congruence and incongruences - the disjunctures between self and ideal self, between an individual's phenomenal field (subjective reality) and the external reality (the world as seen by others). Combs (Snygg & Combs, 1949) elaborated the phenomenal self as an object and a doer, concluding that what a person thinks and feels determines what a person will do. His research established a list of perceptual characteristics, as inferred from an individual's behaviors and statements, as observed by trained panels of raters. The *self-as-adequate* was most often associated with successful individuals in the helping professions (e.g., clinical psychologists, counselors, teachers, health care specialists, government service providers) (Combs, Richard, & Richards, 1976).

In my own research (1975, 1982), *self-as-open-to-experience* was the perceptual characteristic that discriminated between counselors and legislators who were identified as most or least effective. Other salient perceptual variables that have been found to be characteristic of

Continued next page

Con't from page 10

successful individuals include: self-as-dependable, self-as-worthy, self- as-wanted, self-as-identified-with-others, self-as-internally-motivated, others-as- worthy/able/ dependable, and tasks-as-larger/freeing/meaning-oriented (Combs, Miser, & Whitaker,1999; Combs, Soper, Gooding, Benton, Dickman, & Usher,1971).

Wylie (1968) reviewed the literature on self-concept and found support for viewing this concept as comprising a matrix of social and private conceptions of the self, both actual and ideal. She concluded that the trend was for self-concept constructs to include a stronger 'sense of individualized goals' as opposed to James's 'centre of experience'. A summary of psychological principles associated with the perceptual-humanistic theories of the mid-1900s is provided by Purkey (1972).

THE SELF-CONCEPT: ASSUMPTIONS IN PERCEPTUAL/HUMANISTIC PSYCHOLOGY

Adapted from Purkey (1972) Personality Course Handout '... distillation of thought from Rogers, Allport, Festinger, Combs, Diggory, Lecky, Jerslid, Jourard, and Purkey'.

1. The self-concept is the awareness an individual has of one's role and place among living beings and influences behaviour and affect; personality and well-being.
2. The self-concept generates intelligence, motivation, productivity, and creativity. It is an inner manager of the daily flow of perception and action and is influenced by external and internal conditions.
3. The humanistic theorists state: Nothing is so highly personal as 'reality'. Reality is understood in relation to the self. Central to all perception is a person's perception of *self*. The self consists of attitudes, beliefs, and opinions that a person considers true about his or her personal existence.

- The maintenance, protection and enhancement of *self* is the basic motive for behavior.
- The *self* is usually more important than the physical body.
- We learn to perceive/understand ourselves, others and the world as a result of experience.
- The *self* is a continuous process experienced as a steady state, at a point of time in a lifelong evolution of *who-I-am*. This flow includes constant assimilation of new ideas and expulsion of old ideas. The healthy, productive *self* is a product of self- regard and regard from others.
- As *self* perceptions change, behavior changes.
- Behavior is determined by perceptions and not by facts, i.e., objective or collectively determined reality.
- An individual perceives different aspects of *self* at different times with varying degrees of clarity.
- The *self* maintains coherent productivity by striving for consistency, stability and predictability and therefore resists change.
- The more central a belief about the *self*, the more resistant the *self* is to change.
- The *self* is active as a whole. Ideas included in the self system must seem to the individual to be consistent with one another.
- Any experience which is inconsistent with the organization or structure of the *self* may be perceived as a threat, and the more of these perceptions there are, the more rigidly the self-structure is organized to maintain itself.
- Experiences of failure and success generalize throughout the self system.
- Psychological problems arise when a person cannot integrate the centrally held beliefs, attitudes and interests co-existing within the self-concept.
- Defending the *self* from internal and/or external threat restricts healthy development and awareness of growth opportunities.

These principles were reiterated or reinvented in academic-generic format as *Learner-Centered Psychological Principles* by the Division of Educational Psychology of the American Psychological Association (*Newsletter for Educational Psychlogists*,1995). Like the nineteenth century bifaceted construct of self-concept, these principles are presented as having two dimensions: one is the *substantive content* of the principles, and the second is the *learning process* (p. 4).

At the end of the twentieth century, self-concept constructs were just beginning to emulate models of natural processes, from quantum physics such as particle and wave functions, to cybernetics, the science of communication and control, i.e. negative and positive feedback loops. Both of these information loops operate from *reference values*. The negative input loop is like a thermostat that causes air conditioners to go to work to adjust temperatures that vary from a preset value, i.e. they precipitate movement toward a *desired goal*. The positive feedback loop is generated by a preset reference value

Continued next page

Con't from page 11

that is to be avoided, initiating action to move away from a *repellant goal*. Consequently the self-concept's governance activities can be described in cybernetics language, as activation (motivation) of approach-avoidance processes according to self-concept contents, preset reference values and goals for the future (realization of the ideal-self, achieving specific objectives: family, career, health, homes, cars, boats, etc.).

Actions taken to attain specific objectives, each of which could be assigned to be associated with the general goals of survival, adequacy, growth, and meaningfulness, fall under a category of How-I-Behave, or the *self-as-process*. Wheatley suggests that it is only at the end of our lifetime that we are able to discern our individual *basins of attraction*, i.e., the strange attractors that shaped the fractal coastlines of our self's voyage across the years. Then, and perhaps only then, we can see the meaning and purpose (motivations, strange attractors) of our time of being.

We are fortunate if we can catch a glimpse of our attractors interacting with counterpoint resellers in mid-stream life. According to *catastrophe theory*, it is in these moments of non-linearity that a small change in one major variable produces an abrupt and usually large change in another variable. With logical ways to interpret the meaning and cause of drastic changes in self-concept and behavior, these sudden dysfunctions may lose some of their post-traumatic effects.

VITAL-SIGN CHARACTERISTICS OF THE SELF-CONCEPT

For most of us it is enough to know that complexities when found in self-concepts and personalities are associated with less vulnerability to depression and illness in response to life stressors. It is more practical for counselors and consultants to recognize the connections between the *vital-sign emotions*, i.e., curiosity, anxiety, and anger (Spielberger, Ritterband, Sydeman, Reheiser, & Unger, 1995; Spielberger & Starr, 1995; Spielberger, Reheiser, & Sydeman, 1994) and their motivational impact on the individual self-system. The links between health conditions and individual personality traits are becoming clearer (Spielberger & London, 1982, 1983, 1990).

Our self-concept travels along with us on the human growth and development paths detailed by Erickson, Freud, Kagan, Levinson, Piaget, and Vygotsky. Ausubel (1963) described the progress of *self* in terms of *satelizers* and *incorporaters*. *Satelisers* are more followers or absorbers of significant others' opinions.

Incorporaters take information or feedback and work it into their own schema, thus making them more likely to become independent, individualistic and / or leaders. A widely accepted child development model articulates normative phases, tracing maturation in self from behaviors characterized as *dependent, counter dependent, independent*, and into *interdependent* activities. This life pathway gained secular, popular recognition in the writings of Covey (1990). Such models provide ways of sorting out cross-cultural issues reflected in contrasting self-concepts and discrepant psychometric results. Cross-cultural issues are deferred to the next section, and the universal matter of disengagement, disease and death will conclude this section. Once again, Carver and Scheirer (1998) provide compelling new science imports to shed light on relevant self-concept issues.

The term *defaults* in the computer environment refers to preset decisions for computer operations, an automatic way of system functioning when not given an overriding instruction by the operator. As the self grows into adulthood a number of skills are acquired and so well practiced that they can be carried out without conscious planning or thinking. We all have experiences with such *defaults*, i.e., driving a car, playing a piano, and typing on the computer keyboard, and they save us time. They are shortcut efficiencies in our work and daily living. There are plenty of 'important' problems for our mind to deal with on a conscious level during the mid-life time, i.e., getting an education, rearing a family, building a career and carrying out multiple civic and social responsibilities. Later in life, there are fewer and fewer decisions to be worked through. Life gets to be routine and more and more decisions are default acts, i.e., we become 'set in our ways'.

The hypothesis is that movement toward goals that require effortful thinking results in a sense of subjective well-being. The older self that begins to disengage from the struggle of life, putting all decisions into default mode, or into the hands of others, is more likely to enter into a phase of hopelessness, pessimism and decreased ability to recover from illness or surgery (Carver & Scheirer, 1998, p. 357). The sense of importance attached to self and goals is diminished as more defaults take over governing action patterns until there is nothing that needs our attention-demanding decision-effort. American nursing care facilities are already overcrowded with the rapidly increasing population of older Americans.

Continued next page

Con't from page 12

Gerontologists alert us to the fact that it is critical to find ways to allow the elders to be involved in real-time problem solving and decision making. As my father entered his golden period, it was my role to help him navigate the years with dignity. Insisting that care givers call him by his full name and career-earned title of address did not win me popularity with rehabilitation staff and home care providers who wanted to use first names, driving for instant friendship and intimacy.

The practice in Western cultures of treating an older adult like a child rushes a *self* into default activity and precipitates a cusp catastrophe shift of self-concept back into early life phases of dependency. Elderly people cling to survival since they have been robbed of working on their basic goals, i.e., adequacy, growth, and meaningfulness that produce the sense of importance. We are cultivating a mounting population with untapped resources, wasting irreplaceable talent and energy. Taking over problem-solving activities and importance from tenured selves destroys identity and purpose, hastening the end of the person(ality).

LIFETIME ACHIEVEMENTS AND TRACK RECORDS: WHAT-I-PRODUCE

The who-how-what model of self-concept is inspired by something-old and something- new. The something-old is one of my long time favorite teaching *tools*. Participants in the leadership development courses I teach never fail to respond to a simple three-level chart I sketch to remind them that their job requires attention to the 3 Ps:

1. Product (task, mission: *what* we are doing or producing)
2. Process (relationships, interactions, methods: *how* we are doing it)
3. Persons (individual skills, well-being, interests: *who* is doing it)

The typical European-American self-concept reflects belief that a personal *self* is the primary agent. The individual is responsible for actions and for maintaining internal consistency. Self-ways of Japanese, Korean, and Chinese groups included in these studies are described as the person perceiving their self as embedded within relationships. The individual assumes responsibility for behaving flexibly in their particular community in order to maintain and further the welfare of their relationships and the larger community. In the Asian self way, priority attention is given to interactively defined meanings over the private meanings held by any individual self.

European-American self-concepts are organized to be aware of how the social order can be reconciled with what these researchers called an 'all-important individual order'. In contrast, the self- ways of Korean, Chinese, and Japanese persons who come from the Confucian tradition will emphasize achievement of virtue through development of the individual into a socialized person, a self that assures that maintenance of social order will prevail over individual rights or divergent opinions. This sounds similar to the work objective of the psychologist from the iron -curtained Russia who stated in personal conversations during the 1983 International Union of Psychology convention that the job of the Soviet psychologist was to shape individuals into model communist citizens.

The studies of African self-ways, generalised across 47 countries, multiple religions and ethnic groups, indicate more similarity to the Asian self-way than to the Euro-American self way, but includes several distinct characteristics. For example, the African self-way is reported to place greatest emphasis on *what-I-produce,* i.e., add to the group. Personhood and individuality were reported to emerge late in life, based on achievements such as children and contributions to the maintenance of the community. Given present data, most likely the strong hierarchical and longitudinal *reference values* prevent fostering of selfhood until the end of the life span. In many African groups, it is considered rude or dangerous to talk about the self. Many African social systems seem to be vertically organized collectives that ascribe active responsibility for self-way management to deceased ancestors, who are believed to afflict people who have been disruptive to 'right relationships within the social order'. (Markus, Mullally, & Kitayama, 1997, p. 43.)

The globalisation of daily news, electronic mail communications and multinational business alliances may usher in a new era of self-ways. Undoubtedly, it will be a very long time developing a cultural climate to support a self-concept in which the 'hometown' identification embraces the 'global village' that gives priority to being a 'world citizen'. Nevertheless, it would be worthwhile and interesting to track the gradual merging and integration of self -ways, a progression that may have to follow a route similar to one suggested for classifying *globalisation* stages of development in business environments (Ayman, Kreiker, & Masztal, 1994) as indicated [below] on the next page.

Continued next page

Con't from page 13

INTERNATIONAL ORGANISATIONS		GLOBAL ORGANISATIONS	
Stage 1	**Stage 2**	**Stage 3**	**Stage 4**
Ethnocentric	Polycentric	Regiocentric	Geocentric
Export-import	Offices in	Strategic plans	Multinational
National controls	Several countries	Made regionally	Equal status
Self-ways separated	Self-ways respected	Balancing of private and social in all self-ways	

Plotting a course of self-way adjustments that would enable individuals to adapt, survive, and thrive in an era of global consciousness is, admittedly, is an ambitious undertaking. Self-concept change is considered to be hard work and painful, but possible. It is predicted to be easiest if one reference value (goal) is set aside and another is at hand to take its place. It is important that there is a link from the new reference value (i.e., action goal) to higher-order values and goals. In the process of making such links more visible and accessible, models of global self-concept development may play an increasingly important role in shifting national and cultural self-ways away from extremes of private and social self-ways, that serve as substrata for aggression and war (Groebel & Hinde, 1989, 1991; Spielberger, Reheiser, & Sydeman, 1995). New self- ways will assign to the self a creative function, tasked with the job of effortful problem solving to find ways for expressing anger in productive-constructive modes (Pelligrin & Spielberger, 1995, O'Roark, 1988, 1989, 1990, 1992).

The innovative effortful thinking products of a self, of a social group, or of an era can contribute more or less to survival of the species. Some of the more compelling questions an American therapist or consultant asks a client are: How do you want to be remembered when you are dead?; What is it you wish to achieve/accomplish/do before you die?; If you were told you would die in six months, how would you use your time? Answers vary depending on the individual, and according to the self-way. Our products, artifacts, knowledge, children or students are tracks we leave in the sand. These are the bones and fossils of a self-concept.

REFLECTING ON GLOBAL SELF-CONCEPT

Criteria for a good theory in science call for the conceptualization to be a logical set of related assumptions that explain a set of observations, is built on previous knowledge, and is simple and testable. Aldefer (1956) simplified the thinking about universal needs of the self (security, relatedness, growth). Jung (Myers & Myers, 1980; Myers & McCaulley, 1989) simplified the self-as-process by proposing that we all have two tasks in life: to gather information (perception) and to make decisions about what to do based on that information (judgement). Einstein (*Time,* 1979) and Wilson (1998) simplified the universe by conceptualising the unity of knowledge (fundamental principles are at work everywhere).

These foundations imply that a sensible understanding of the self-concept is possible. Sophisticated theorems and evidence of the power of the unconscious mind and of external manipulators over judgement and behavior (Azar, 1996; Skinner, 1956; Levinson, 1973) do not take away from the power of hope (Snyder, Cheavens, & Sympson, 1997; Snyder, Irving, & Anderson, 1991; DeAngelis, 1991; Frankel, 1957; McClelland, 1965), or the need for trust (Gibb, 1978; Jourard, 1964; McDonald, Kessel, & Fuller, 1972; Pelligrin & Spielberger, 1995; O'Roark, 1999 in press).

What the new science principles teach us about the self-concept is that there is order, even in chaos and catastrophe, that there are universal goals (reference values) that serve as the GPS calculators for the self-concept's life journey, that we are growing or dying (Eiseley, 1946, 1957). Dying is the clogging up of the mind with established defaults (Carver & Sheier, 1998) that are no longer questioned nor examined.

Fortunately, the nature of the self-concept is dynamic, a vehicle for conveying a continuous self-identity across the developmental phases of the life cycle. It is likely that there are 'set points' in the culturally divergent self-concept systems that endorse greater or lesser levels of positive regard, for greater or lesser degrees of dependence and independence, for greater or lesser degrees of ambiguity, or authority, or other social status variables.

How do we discover the optimal combination of valences within a self-concept system in order to reduce hostility, aggression, violence, hatred, and xenophobia? How can the inner editing of *who I am* be infused with productive optimism, adequate humility and generous attitudes? How can the self-concept system promote the creative survival mix of the elemental emotions such as curiosity, anxiety, anger, affection?

It is not spurious that ancient wisdom concluded that God goes by the name of Elohim - 'I am who I am', and that this self-way is important for people to keep in mind as they strive to survive, co-exist and collaborate. As new science psychologists work out the underlying mechanisms of human well-being and quality of life, the best theories will build on accumulated wisdom and evidence,

Continued next page

Con't from page 14

while opening new paradigms and delving deeper into how people go about editing *who-I-am*.

EXPLORE DIFFERENCES AND SIMILARITIES IN HUMAN VALUES: CULTURAL AND CROSS-CULTURAL RESEARCH APPROACH

Anna Laura Comunian, Ph.D.
Director at Large, ITALY

" I am not an Athenian, or a Greek, but a citizen of the world"
Socrates

Cultural and Cross-Cultural Research Approach explore differences and similarities in human values. Each of the approaches has a place in the attempt to relate culture and psychological processes.

Cultural psychology refers to the branch of psychology that holds that human behavior is significantly influenced by cultural differences, meaning that psychological phenomena can only be compared with each other across cultures to a very limited extent. Cultural Psychology has continued to expand, incorporating culture and diversity into studies.

Cross-cultural psychology is the scientific study of human behavior and mental processes, including both their variability and invariance, under diverse cultural conditions.

Continued next page

Con't from page 16

Examination of the kinds of the people who are studied by cross-cultural psychologists suggests that they considered the construct of "cultural distance" as reflecting differences in language, social structure, religion, political system, level of literacy etc. Cross-cultural psychology includes a search for possible universals in behavior and mental processes.

Psychologists have used the *emic/etic distinction* for some time. The *emic* approach studies behavior from within the culture, and mostly is based on one culture; the *etic* approach studies behavior from outside the culture system, and is based on many cultures. Researchers working across cultures need recognize and protect their own and their partners "cultural autonomy", their social goals, knowledge and values. One reason to collaborate across cultures is that many global problems –diseases, conflict and inequity without global partnerships.

Currently, many psychologists conducting cross-cultural research use what is called a pseudoetic approach. This pseudoetic approach is actually an emic based approach is designed to work as an etic approach.

The relationship of culture and psychology is conceived rather differently by different kinds of psychologists. In this paper some of these conceptions are presented and a possible synthesis among the points of view is proposed.

Researchers working across cultures

Hofstede's cultural dimensions theory. One of the most active research traditions in cross-cultural psychology is Hofstede's cultural dimensions theory. This theory found that cultures differ on four dimensions: power distance, uncertainty avoidance, masculinity-femininity, and individualism-collectivism (Hofstede, 2001). Alternative measures to assess individualism and collectivism were proposed (McSweeney, 2002). Indeed, the individualism-collectivism debate has itself proven to be problematic. Strong individualistic and collectivistic orientations can coexist in various countries.

Personality Factors. How to compare traits across cultures have often questioned. To examine this question, studies measuring personality factors, using trait adjectives from various languages, are known as lexical studies (McCrae, 2012). Over time these studies have concluded that Extraversion, Agreeableness, and Conscientiousness factors almost always appear, but Neuroticism and Openness to Experience sometimes do not. Nevertheless it has been determined that the Five-Factor Model is a universal structure and can be used within cross-cultural research and research studies in general.

Emotions. People emotions have been interpreted in similar ways across various cultures. In the field of cross-cultural psychology Ekman et al. (1987) have conducted research examining judgments in facial expression cross-culturally. One of his studies included participants from ten different cultures. They were required to indicate emotions and the intensity of each emotion. In result, the study showed that there was agreement across cultures as to which emotion was the most intense and the second most intense. These findings provide support to the view that some cross-cultural psychologists hold in which there are universal facial expressions of emotion.

Facial Expressions. Facial expressions are said to be universally: Huang and his colleagues (2001) performed research that looked at how a culture may put different labels on certain expressions of emotions. Their findings show support for the notion that there is a cross-cultural difference present in emotional judgement. Also, because every culture has different values and norms, it is important to analyze those differences in order to gain a better understanding as to why certain emotions are interpreted differently or not at all.

Subjective Well-being. Also the term "subjective well-being" is frequently used throughout psychology research and is made up of three main parts: a) life satisfaction (as cognitive evaluation of one's overall life), b) the presence of positive emotional experiences, and c) the absence of negative emotional experiences (Suh & Oishi, 2012). Across cultures people may have different opinions on the "ideal" level of subjective well-being. When comparing subjective well-being cross-culturally it appears important to take into account how the individuals in one culture may rate one aspect differently from individuals from another culture.

Social Conflict. How cultures differ in the ways they approach social conflict and how culture continues to be an important factor in human development even into old age was also evidenced. For example Grossmann et al. (2012) found that Americans emphasize individuality and solve conflict in a direct manner, while the Japanese place an emphasis on social cohesion and settle conflict more indirectly. The Japanese are motivated to maintain interpersonal harmony and avoid conflict, resolve conflict better, and are wiser earlier in their lives. Americans experience conflict gradually, which results in continuous learning about how to solve conflict and increased wisdom in their later years. The current study supported the concept that varying cultures use different methods to resolve conflict.

Continued next page

Con't from page 17

Differences in conflict resolution

Differences in conflict resolution across cultures can also be seen with the inclusion of a third party. These differences can be found when the third party becomes involved and provides a solution to the conflict (Lieche, 1992).

Gender roles. Williams and Best (1990) have looked at different societies in terms of prevailing gender stereotypes, gender-linked self-perceptions and gender roles. They both find universal similarities as well as differences between and within more than 30 nations. One of the main findings overall was that under the topic of sex and gender pan-cultural similarities were shown to be greater than cultural differences. Furthermore, across cultures in social groups the way in which men and women relate to one another has shown to be similar. Further calls have been made to examine theories of gender development as well as how culture influences behavior of both males and females.

Childrearing practices. Berry et al.(1997; 1992) refer to evidence that a number of different dimensions have been found in cross-cultural comparisons of childrearing practices, including differences on the dimensions of obedience training, responsibility training, nurturance training (the degree to which a sibling will care for other siblings or for older people), achievement training, self-reliance, and autonomy. On cross-cultural influences on child development, the following topics were shown to consistently come up: a)to conceptualize variability within and across cultural settings, b) to characterize activities of the child's mind, and c) to improve methodological research in culture and development (Super & Harkness,1997).

Future developments

The future of the relationship of culture and psychology may include more investigations which use methods of both cultural and cross cultural psychology and collaborations between cultural psychologists providing the data from one culture and cross-cultural psychologists utilizing the data of cultural psychologists from many culture to understand both universal and culture-specific influences of culture on psychological processes.

The rise of cross-cultural psychology reflects a general process of globalization in the social sciences that seeks to purify specific areas of research which have western biases. In this way, cross-cultural psychology aims to make psychology less ethnocentric in character than it has been in the past. Cross-cultural psychology is now taught at numerous universities located around the world, both as a specific content area as well as a methodological approach designed to broaden the field of psychology.

The psychologists can help to solve global problems depend on the ability to collaborate with colleagues of other cultures and promote more and better cultural and cross cultural research, increasing capacity, empowered colleagues, personal growth, and a stronger and healthier global community.

INFUSING GLOBAL PERSPECTIVES: PROVIDING STUDENT WITH OPPORTUNITIES TO CONDUCT INTERNATIONAL PSYCHOLOGICAL RESEARCH

Richard Velayo, Ph. D., Lucio Forti, Simin Ghahghahi, Sonia Javani and Hina Siddiqui
Pace University, New York

(From left to right): Sonia Javani, Hina Siddiqui, Richard Velayo, Ph.D., Simin Ghahghahi, Sarika Persaud (PsyD student in School-Clinical Psychology program), and Lucio Forti

Within the last two decades, there has been a noticeable increase in the number of psychology instructors who are exploring ways to incorporate a greater international content and infuse enhanced international perspectives in the courses they teach. One key strategy in achieving this goal is by providing students to join research teams that encourage international and cross-cultural research in psychology.

At Pace University in New York City, there are several

More specifically, 5 of the 11 active faculty-led research teams (http://www.pace.edu/dyson/academic-departments-and-programs/psychology---nyc/research-groups) provide valuable research mentorship for student academic and professional development. Students may become involved in any or some of research teams as part of their major or program of study by registering for an independent study course, a mentored lab class, or through a thesis or dissertation project. One of the research teams worth noting is called the "Internationalizing the Teaching of Psychology (IToP) team led by Dr. Richard Velayo, Professor of Psychology at Pace University. His research group called "Internationalizing the Teaching of Psychology (IToP) Team (http://rvelayo.jimdo.com/itop-team/) involves research that focus on strategies that help infuse international content and promote a global perspective within the discipline of psychology at the higher education level. More specifically, IToP's research involves projects related to the following: (1) identifying effective pedagogical strategies to internationalize psychology courses, (2) developing of an assessment tool for an internationalized psychology course, and (3) applying Internet-Based Technologies (IBTs) as teaching and research tools to help infuse international content. Research projects generally involve looking at cross-national differences of psychological constructs, psychological practices and perspective in countries other than the U.S., the design and development of online surveys administered to various countries, identification of and access to resources (e.g., instructors, courses, multimedia materials), and curriculum-based applications of IBTs. Students involved in his team get to present their individual or group projects at local, regional, national, and/or international conferences. Some of the psychology conferences in which the IToP team has presented in include the annual meetings of the American Psychology Psychological Association, Eastern Psychological Association, Greater New York Conference on Behavioral Research, Hunter College Psychology Conference, International Council of Psychologists, and Pace University Psychology Conference.

Since fall 2015, there have been 12 students who have been part of the IToP research team. There are currently 4 individuals (one masters alumnus and three current masters students) this spring. Each student is actively undertaking research projects of interest to them, which ties in one of the topics related to the IToP team research subtopics (as mentioned above). At each weekly meeting, students provide the entire team with updates about their individual work and discuss preparations for presentations (e.g., poster, paper, symposium) at an upcoming confer-

Continued next page

Con't from page 19

ence. Students are encouraged to present their work at student-focused, local, and/or regional conference held during the latter part of that semester or the following semester. This fall 2015 semester, the IToP team highlights three student research projects. Below are brief descriptions written by current IToP students about their projects:

Lucio Forti (lforti@pace.edu) (Alumnus, MA in Psychology)

"Designing an Internet-Based Infrastructure for an International Leadership Network"

This project will review currently existing technologies that may be used by leaders in the field to establish a network through communication and collaboration among psychologists, psychology students. Elements of a modern workflow for collaboration will be presented as well as tips for successfully managing tools and user training. The feasibility of using webconferencing tools (e.g., GoToMeeting, Blackboard Collaborate) to facilitate meetings and presentations and to archive these in video, audio, and chat formats will also be explored as a way to make them to those unable to attend, or used for further collaboration and training.

Simin Ghahghahi (sg71695n@pace.edu) (Student, M.A. in Psychology)

"Cross-cultural examination of depressive rumination in college students: Brooding versus reflection"

This research project will examine studies on rumination in college students, focusing on depressive rumination and its two subtypes: brooding and rumination. There have been studies done on how gender, mental disorders, etc. play a role in rumination, but there is little research on how race, ethnicity, and culture play a role in rumination -- depressive rumination to be specific. This paper will also provide a review of how culture plays a role in type of rumination a person uses and will compare results of studies done from people in the United States versus people in other countries such as Japan, Russia, and the United Kingdom.

Sonia Javani (sj09763n@pace.edu) (Student, M.A. in Psychology)

"Cross-cultural study of Autism Spectrum Disorder: Review and recommendations on closing the gap among developed and developing countries"

This research project will review the differences in prevalence rate, management, and support programs that are available to individuals with Autism Spectrum Disorder and their families among developed and developing countries. The lack of prevalence studies in developing countries is believed to account for the limited information on the identification of children with this condition, the dearth of support services, and insufficient management of this disorder. Educating the society to break the stigma, delivering culturally competent screening tools, and promoting international organizations to increase advocacy action for individuals with ASD are some of the recommendations mentioned to assist and close the gaps.

Hina Siddiqui (hs80890n@pace.edu) (Student, M.A. in Psychology)

"Comparison of Diagnosis and Treatment of Mood Disorders between Pakistan the United States"

There have been several studies on the diagnosis and treatment of major mood disorders in the United States and drawing a clear and concise association and comparison between the methods used in the United States with the methods used in Pakistan would be beneficial. This research project will focus on some of the symptoms associated with these disorders, and briefly touch upon suicidal ideations. Diagnostic and treatment approaches used in Pakistan versus those in the United States will be compared. Suggestions on future research and clinical practices that address cross-national and cross-cultural variations will be presented.

These student-initiated projects exemplify research that contributes to international content that may be infused in the teaching of courses in psychology. Such research projects provide not only content that may be shared with other research team members, but will also be archived as student research projects accessible to other students and instructor in the departmental for instructional purposed or to motivate further international research. Additionally, these projects help cultivate a more international perspective about the discipline of psychology and a greater appreciation for psychological constructs taking into consideration the cross-cultural and cross-national contexts in which it applies. There is tremendous value in getting students involved in the internationalization the teaching of psychology, particularly in the U.S. More importantly, it is essential to prepare them for a society that is increasingly becoming global.

For more information about this presentation and of the IToP team, please contact Dr. Richard Velayo at rvelayo@pace.edu.

ICP INC ACTIVITIES AT THE UNITED NATIONS-VIENNA, AUSTRIA

Roswith Roth, PhD.
UN Representative—Vienna
Austria

I attended the **Conference of NGOs in Consultative Relationship with the United Nations** (**CoNGO**) a celebration of "**70 Years United Nations and Cooperation with NGOs: Shared Ideals, Shared Values, Shared Futures ,The Role of NGOs in Securing a Sustainable Future"** on Monday 5 October 2015 at the Vienna International Centre (VIC).

This event was celebrated in New York and Geneva earlier this year. The program consisted of a welcome address of **Wolfgang Beigelboeck**, the CoNGO Vice-President, Vienna, an introduction **by Cyril Ritchie**, President of Congo, with the title "Shared Ideals, Shared Values, Shared Futures" and two keynotes by **Martin Nesirsky**, Director, United Nations Information Service (UNIS) Vienna and **Stefano Prato**, Managing Director, Society for International Development (SID), Rome. After the keynotes statements were given by **chairs of the NGO Committees in Vienna.**

Mr Beigelboeck stated that October 5, 2015 is this year the "World Habitat Day". In Resolution 40/202 of 17 December 1985, the UN General Assembly designated the first Monday of October of every year as World Habitat Day. In 2015, the United Nations chose the theme ***Public Spaces for All.*** The World Habitat Day 2015 campaign aims to recognize the challenges and issues around Public Spaces. The streets and public spaces have often been overlooked and undervalued, but are increasingly being considered the backbone of cities. Public spaces are places which are accessible and enjoyable by all without a profit motive and take on various spatial forms, including parks, streets, sidewalks, markets and playgrounds. Good public spaces enhance community cohesion and promote health, happiness, and well-being for all citizens as well as fostering investment, economic development and environmental sustainability. Additional he stated that UN is working in dangerous situations, doing dangerous work at dangerous places and fosters the relationship between local and international NGOs. Above all the UN is expected to be the governor of peace and human rights. The diversity of NGOs is both strength and weakness at the same time they give a vital contribution for the citizens of the world.

Mr Ritchie talked about "Shared Ideals, Shared Values, Shared Futures": these lead to shared actions. Actions depend on the courage of NGO members. Many or most UN conventions come from NGO initiatives. NGOs have to be vigilant to spread good practices. But there are obstacles: (1) money: UN has serious problems to get money from members, (2) implementation - NGOs have to put pressure on governments to implement the UN decisions and resolutions and (3) increasing restrictions of NGOs. Considering shared futures NGOs have been coming an immensely long way as a voice of the people. For 2030 - we should plan implementations and actions for shared responsibility we not only want but we need!

Mr Nesirsky said CONGO is nurturing and fostering cooperation of UN-NGOs and civil society. Civil society is the oxygen of the society, peace and human rights. No country can do this alone. NGOs are supporting UN and they also monitor the work, analyze it and evaluate failure and success. Peace to the People and the Millennium Goals aim that less than 10% of people will live in poverty soon. The extreme poverty rate has been halved, but major challenges remain. This is done jointly, done together, evaluating the shortcomings, taking actions to prevent backslide, securing the chance for the future.

Mr Prato talked about the theory of change which is unfolding around us 7 pillars - growing and expanding goods - water today, air tomorrow - forms of homogenizations: you find all the same products at the Amazonas or in New York - cooptation of science - decreasing role of the state - loss of serenity - shrinking of democratic space - numbers over voices - pressure of media - progressive capture of public space - use of law as instrument of power - nutrition. Several challenges are related to modernity: existential challenges, second causes of deaths are suicide, 800.000/yrs., ethical aspects of science and technology, poverty, violence and culture of violence, kids are daily exposed, data revolution etc. "Non-state actors (NGOs)" are merging private and public interests, are a public - private relationship, with no conflict of interests.

The following NGO Committees reported and gave statements:

- Committee on Aging
- Committee on the Status of Women
- Committee of Peace
- Committee on Sustainable Development
- The conference gave a good overview of the challenges and success of NGOs in the UN.

Con't from page 21

I attended the 60th Session of the Commission on the Status of Women which included a Live Stream session of the CSW60 Opening Ceremony at the UN in New York.

The Program consisted of a welcome remark of Anne Thomas, the Deputy Director of the United Nations Information Service (UNIS) Vienna, Focal Point for Women for UNOV and UNDOC.

The Chair of the NGO Committee on the Status of Women, Vienna Martina Gredler, gave an introduction. Marlene Parenzan, a member of the NGO Committee on the Status of Women at the UN Vienna, a former chair of the NGO Committee on the Status of Women Vienna gave a speech about Some thoughts of a long-term observer and activist and Eva Maria Burger, Deputy Head of the Department for Socio-Economic Equality, International and EU Affairs at the Austrian Federal Ministry of Education and Women's Affairs gave a Keynote. Then we attended the Live Stream Opening Session of the Opening of the 60th Session of the Commission on the Status of Women. All attendants expected to see in New York a female chair and more female speakers.

ICP INC ACTIVITIES AT THE UNITED NATIONS-NEW YORK, USA

Florence Denmark, PhD
Main Representative UN
New York

In the past year, as usual, ICP representatives have been very active at the United Nations. They have been active participants of various committees such as the NGO Committee on the Family, the Ageing Committee, Migration Committee, Human Rights Committee, and the Committee no the Status of Women.

In New York, we have the following NGO Representatives: Martin Butler, Florence Denmark, Eva Sandis, Norma Simon, Richard Velayo, and Pete Walker .

Florence Denmark, the Main Representative for the ICP NGO UN Committee, is serving as the co-chair of the UN NGO Family Committee. In addition to her active role in the Family Committee, Florence Denmark has been holding monthly meetings for the New York Representatives and interns. Florence also is active on the Executive Committee on Ageing. She served on the International Day of Older Persons (IDOP) Committee and the Administrative Committee for the Psychology Day Program (having chaired or co-chaired the Psychology Day for its initial 3 years).Florence is also active on the Psychology Coalition at the UN (PCUN) chairing the Nominating Committee. Florence represented ICP on the CONGO Committee Board. CONGO represents all the NGO Committees and ICP was one of the few NGOs to be elected to the CONGO Board.

Martin Butler served on the Psychology Day Planning Committee for the 2015 Psychology Day. He was also a member of the Psychology Coalition, and he helped interview potential interns for ICP. he was also a member of the Committee on Migration.

Norma Simon serves as the Corresponding Secretary of the UN NGO Family Committee. Dr. Simon has served as a member at large for the NGO Committee on Ageing. She has also served on the Post 2015- agenda subcommittee, the Hazzard subcommittee, and the website subcommittee. She was active on the International Day of Older Persons Committee and arranged the luncheon for 80-100 people for the event. Furthermore, she was an active participant on the sub-committee for Psychology Day at the UN and arranged the reception for the event.

Pete Walker has concluded a two year term as a founding officer and Treasurer for the Psychology coalition at the United Nations (PCUN) and has rejoined the NGO Committee on Ageing-NY, where he participated in preparation for the 25th annual Internal Day of Older Persons (IDOP). In this capacity, Dr. Walker has made a substantive historical contribution to the Planning Committee, which this year is focusing on UN Habitat III, to be held in 2016. Additionally, he has been participating in the NGOCOA-NY Website Committee, which will see the launch of the new NGOCOA-NY website in early May. Recently nominated to serve a two year term on the NGOCOA Executive Committee as Member-at-Large, he also serves on the Virginia Hazzard Fund Committee, which is now seeking a new project regarding older persons' literacy. Also as a past co-chair of the second Psychology Day at the United Nations, Dr. Walker participated on this year's Advisory Committee, planning the 9th Annual event that was held in late April. In mid-April he was a panelist in a Health Cities Lecture for the Urban Studies Program at Fordham University in New York. His topic was "Coastal Cities and Climate Change".

Eva Sandis has been very active on the Migration Committee, having been a former chair. She has been focused on two principal items:

1. Advocating for the post-2015 agenda, especially on interventions for the human rights of migrants and their families worldwide: at NGO Briefings, whether with ECOSOC or at the UNGA

Continued next page

Con't from page 22

Intergovernmental Negotiations or in preparation for the Commission on Population and Develop ment.

2. Pushing advocacy on migrants in transit, especially women and children. Her subcommittee is preparing an advocacy brief both for the UNHCR NGO Consultations in Geneva in July and for the GFMD in Turkey in October. Eva will attend the meeting at Geneva. We are fcalling for a Comprehensive plan, which includes protections for migrants and their families before they are in transit, during transit, and post-transit (similar to the comprehensive plan that States adopted for Vietnamese refugees).

Richard Velayo was part of the Planning Committee for the 9th Annual Psychology Day, which was held on April 28, 2016. The theme of the conference was "From Vulnerability to Resilience: Using Psychology to Address the Global Migration Crisis." He presented at the 2015 ICP Conference in Toronto. The title of his presentation was "Importance of Psychology Day at the United Nations, which was also part of the panel session about ICP at the UN this past academic year.

In Geneva, Anna Laura Comunion has been serving on the Human Rights Committee, and Roswith Roth is active in the UN headquarters in Vienna, serving on the Committee on the Status of Women.

We are also very proud of our interns at the United Nations" Massoma Alam, Tamara Alaryan, Niki Davis, Amanda Gooden, and Sonia Javani. They were selected by a committee, headed by Norma Simon, who coordinated intern activities. They have been involved at the UN through attending and participating in many NGO Committee meetings, DPI briefings, Psychology Coalition meetings, and the planning of the ninth Annual Psychology Day at the UN. The interns were, in particular, very active in the family Committee and the Ageing Committee. They had the opportunity to work closely with the APA interns in assisting and planning numerous events such as International Day of Older Persons, Family Committee end of the year event, and the ninth annual Psychology Day at the UN.

IDOP was a great conference at the beginning of their internship and exposed them to the operational details of holding a large conference. Their responsibilities included data analysis and inputting with managing the guests that have registered either for the main event held at the UN headquarters, and guests that have registered for the reception following at another location. This experience exposed the interns to the populations of which The Committee on Ageing effects and individuals that work to help with their cause. The following reception was a warm welcome for the interns. They were able to hear speeches from the sponsors and organizations, as well as network with members of the executive committee. Before it began, the interns were integral in organizing seating plans and registration. They coordinated with the restaurant staff to ensure all was set and ready before any guests began to arrive.

Other activities that the interns participated in was creating flyers for events for the Family Committee and Ageing Committee, assisting the IDOP luncheon, and serving as guides to help participants find the location of the event. Furthermore, the interns participated in discussions, asked questions, and also made suggestions at executive meetings. The ICP interns along with the APA interns were required to an hour presentation along with Q&A related to family for an event by the Family Committee. The name of the presentation is "Different Causes of Family Trauma: Finding Resiliency on a Global Scale," and includes three subcategories including "Effects of Sexual Violence in War and Conflict on Families, Forced Political Migration, Trauma and the African American Diaspora.

As a final challenge, the interns were asked to assist in the organization of our Annual Psychology day at the UN. As many of them had previously participated in Psychology Days as guess,. There inputs were valuable in continuing and exceeding the expectations of previous yars. Many interns committed themselves to the publicity committee, ensuring that the event was widely marketed and trending. Many held other roles in programming, fundraising, and all played a hand in logistics on the day of. It is with the help of the ICP interns that all of our guests feel welcome and are guided through the UN headquarters to the conference room where speakers and presentations await them.

BOOK REVIEWS

Sandra E. S. Neil, PhD.
ICP, Inc. Director at Large
World Area Chair Coordinator
2014-2017

Sarwono, S. W. (2015). *Indonesian Terrorists in Psychoanalytical Perspectives.* SWAN World: Paris. ISBN: 978-2-84924-426-5.

In Professor Sarlito Sarwono's (2015) book, he explores this notion of 'the hand that disturbs' as a representation; sometimes of the devils' hand, the monster in us, against existing norms. He then presents us with the deradicalisation program for ten ex-terrorists (who were terrorists in Indonesia), and includes Davido's interpretation of each one. There are some very interesting facts that emerge. For example, in a case of a young man who was studying Islam and became a radical, Professor Sarlito Sarwono writes: '..his childhood experience was not that good. He was born in a middle-class highly educated family. His father was an engineer, graduated from a famous engineering institute at Bandung, and worked as a staff at the local government of Jakarta. All his five children has good education….But MI became radical as a reaction formation toward the abusive treatment from his father. He was the only child (amongst five children of his fathers) who was maltreated…' (p.70).

I am totally convinced by this particular projective method, as I have used it myself to trace multicultural families, to trace people who are in blended families, and, in adoptive families, who bring young children into their already succinct family that has grown up. I've have pictures shown to me by two little Thai children, with little language (from age 3 onwards), their pictures of their family, and the moment that disturbed them. I had one little boy showing me how his family was before the second adoption and how it changed for him completely when the second child was adopted (age 3), within the CHaD drawings.

As far as projective testing goes, it is difficult to give the inner and the outer interpretations and diagnostics without making reference to all kinds of aspects, like: pathognomonic signs, the isolation of the person, the mistreatment, the guiltiness of people, their hyper-control, the relationship with each person (including children) to death, the depression in the person, and their mental deterioration, and, isolation anxiety. It's also possible to look to the absence of psychopathology.

Overall, these two books [*The Davido-CHaD in Practice* and *Indonesian Terrorists in Psychoanalytical Perspectives]* are convincing in the effectiveness of the use of the Projective Personality Test. I would recommend them to anyone who deals with families, children and adults. I believe both, adults and children, together in family therapy make a very convincing statement using this test about their own, and, family functioning.

Publisher note: Dr. Neil's review of Dr. Davido's book was published in the *International Psychologist 56.1*. That issue can be found at the ICP, Inc. website: ICP-WEB.ORG.

Judy Kuriansky, PhD
Editor

Many of us around the world struggle with flu season, and know the discomfort and distress associated with that infection. Sadly, in recent times, we became aware of an extreme viral disease, the Ebola epidemic, that ravaged West Africa and threatened many other countries around the world. Initially a mystery, and not declared the world health emergency it actually was, information ultimately circulated about medical issues like symptoms, causes of contagion, and (lack of) cure. However, our international psychology community became alert to the psychosocial issues of this virulent disease that was not getting the attention it deserved. Fear, stigma and discrimination reigned. While media was blamed for causing widespread panic, psychological science and practice needed to be highlighted.

For this reason, the Psychology Coalition of NGOs accredited at the United Nations (PCUN) held a forum in September, 2015, on the topic of "**Eradicating Stigma & Promoting Psychosocial Wellbeing, Mental Health and Resilience in the Ebola Epidemic:** *Policies and Practices to Protect the Global Community."* This forum emanated from the Ebola Task Force, chaired by Dr. Corann Okorodudu, that I convened in my role as PCUN Chair.

Continued next page

Con't from page 24

A brilliant collaborative effort put together a stellar event, sponsored by the Mission of Liberia to the United Nations (Corann's home country, and also one of the three most-affected countries)), and co-sponsored by other missions, including Guinea (also among the three most-affected countries), Uganda, Nigeria, the Netherlands and the USA. This was a precedent for our international psychological community at the UN. Moderated by Okorodudu, the panel had exceptional multi-stakeholder representation, including, speakers from UN agencies (UNICEF, UN Women and WHO), the NGO Committee on Health, a report by Skype from Sierra Leone by Yotam Polizer who is the head of psychosocial programming for IsraAid, an Israel-based international humanitarian NGO, as well as a presentations comparing Ebola to HIV/AIDS by PCUN member Miriam Vega, and an overview and commentary by me about media involvement (in my role also as a journalist) and implications for the Sustainable Development Goals. The panel was held in Conference Room 7 of the UN Conference Building, to full capacity.

The perspectives from top-level UN policy makers and NGOs on the panel and participants in the discussion illustrated to the entire conference how imperative it is that psychosocial issues be addressed in any health crisis.

As a result of the connection with Polizer, I went to Sierra Leone shortly thereafter, during the epidemic, to help them develop and implement psychosocial workshops and trainings for survivors, children, communities, burial teams, hotline operators, social work students, first responders and other helpers who could carry on the work to make it sustainable. Many valuable programs were initiated, and connections made with an extended community of responders from local and international NGOs.

After the epidemic subsided, I returned to Freetown, to participate in the Conference on Mental Health – appropriately called Build Back Better – and to further the earlier work and consolidate connections, since we know from a psychological perspective that the healing process goes on for years after an immediate crisis has abated. In between those times, many conferences of high-level officials, panels, and multistakeholder partners were held at the United Nations concerning Ebola, that I attended.

The goal of keeping the awareness alive about the psychosocial issues – of what I call the 3 S's (stigma, silence, shame) as well as the pain, mourning losses of loved ones and livelihood, ongoing trauma, and rebuilding personal life, relationships, and community – led me to put together a volume titled **The Psychosocial Aspects of a Deadly Epidemic: What Ebola Has Taught Us About Holistic Healing.** See: http://bit.ly/1o4c3wK. Given the traumatic feelings triggered by the epidemic, and the cultural relevance of music in the region, a song was co-written for the workshops (with my co-lyricist Russell Daisey, an international composer) called "Hope is Alive", that became a theme song for many groups, as it stimulated hope and created joyful connections between people who had felt so alienated from each other by the fear of infection. The book has just been released. It includes an impressive collection of chapters by outstanding experts, addressing the issues faced by children, women, survivors, hotline operators, and many other constituents, as well as perspectives of cultural competence, education and public service campaigns, the UN response, and policy recommendations.

The issues are relevant to many other diseases, including the recent ravage of the Zika virus, that has devastated families in Brazil and elsewhere in the world. Videos that dramatically show some of the workshop materials from my work related to Ebola recovery, and also the situation during and after the height of the epidemic, can be seen at http://bit.ly/1KVHgqA (about a workshop with a burial team), and at http://bit.ly/207xXL7 (about Ebola in Sierra Leone: Psychosocial Issues During and After the Outbreak). Do contact me if you are doing work in the area: DrJudyK@aol.com

74th ICP INC ANNUAL CONVENTION AWARD WINNERS 2016

Josephine Tan, PhD.
ICP, Inc. Awards Chairperson

Every year, ICP, Inc. accepts nominations for several awards. Each award has a chair person who works tirelessly to be sure candidates are vetted for that award. It is with great appreciation that I announce the winners of this year's awards and express my heartfelt thanks to all of the chairs for their hard work. The winners will receive a small stipend, a certificate of achievement, a one-year paid membership into ICP, Inc. and a beautiful plaque. The awards will be handed out at the annual convention at the Membership Meeting which will be held on July 24 in Yokohama, Japan.

And the winners are . . .

Seisoh Sukemune/Bruce Bain Encouragement of Early Career Research Award

Award recipient:
Dr. Hiroaki Kawamichi. Gunma University, Japan
Award chair:
Dr. Cecilia Cheng

Denmark-Grunwald Feminist Research and Service Award

Award recipient:
Dr. Joan Chrisler
Award chair:
Dr. Donna Goetz

Fukuhara Advanced International Research and Service Award

Award recipient:
Dr. Janel Gauthier
Laval Univérsite, Quebec, Canada

Award chair:
Dr. Ann Marie O'Roark

Frances Mullen Distinguished Contribution to International Psychology Award

Award recipient:
Dr. Anna Laura Comunian, Padua University, Italy
Award chair:
Was Dr. Comunian but Dr. Tan stepped in as chair for this year because Dr. Comunian is the listed chair.

Dr. Comunian was selected by 3 individuals - A.M. O'Roark, E. Margaona, D. Goetz.

Happy 75th Birthday, ICP, Inc. (1941 –2016) and we wish all a wonderful 74th Annual Convention and Board Meeting in Yokohama, Japan.

Submission Guidelines for
Peer-reviewed Articles
International Psychology Bulletin

The *IPB* publishes peer-reviewed research articles that focus on important issues related to international psychology. The review process takes approximately two months.

Please submit the following three documents in Microsoft Word format to Dr. Vaishali Raval at ravalvv@miamioh.edu:

- A cover letter
- A title page with the title of the manuscript, author names and institutional affiliations, and an author note that includes name and contact information of corresponding author
- A blinded manuscript that does not include authors' names or any identifying information

Cover letter

- In your cover letter be sure to include the author's postal address, e-mail address, and telephone number for future correspondence
- State that the manuscript is original, not previously published, and not under concurrent consideration elsewhere
- State that the manuscript adheres to APA Ethical Principles (Ethical Principles of Psychologists and Code of Conduct), and all co-authors are in agreement about the content of the manuscript
- Inform the journal editor of the existence of any published manuscripts written by the author that is sufficiently similar to the one submitted (e.g., uses the same dataset).

Blinded Manuscript

- Prepare manuscripts according to the *Publication Manual of the American Psychological Association (6th edition)*.
- Check APA Journals Manuscript Submission Instructions for All Authors
- The entire manuscript should be formatted in 12-point Times New Roman font, 1 inch margins, and double-spaced submitted as Microsoft Word document. The entire manuscript should be up to 4000 words.
- The first page of the manuscript should include a title of the manuscript (no more than 12 words)
- The second page of the manuscript should include an abstract containing a maximum of 250 words, followed by up to five keywords brief phrases
- The remaining pages should include the text of the manuscript. For research articles, include introduction, method, results, and discussion. The format of a review paper will vary, and may include a brief introduction to the topic, review of the literature, and conclusions and future directions.
- Provide a full reference list as per the *Publication Manual of the American Psychological Association (6th edition)*.
- Present tables and figures as per the *Manual, if you have any, at the end of the manuscript.*
- Review APA's Checklist for Manuscript Submission before submitting your article.

Upon acceptance

Please note that if your article is accepted for publication in *International Psychology Bulletin*, you will be asked to download the copyright transfer form, complete and sign it, and return to the editor (ravalvv@miamioh.edu) before the manuscript can be published.

Division 52 IPB Spring Edition 2016

Jean Lau Chin, Ed.D.
APA 2016 Division 52 President
chin@adelphi.edu

Division 52 Executive Committee gathered at Pace University in New York City on March 2, 2016 for its Midwinter Meeting. This was an inaugural meeting as Lucio Forti, our new Webmaster and Richard Velayo, our Education and Training Chair helped to launch our first attempt to make these meetings available virtually to promote greater access for our members who could not join us face-to-face from all parts of the world.

International Leadership Network

My presidential initiative is to develop this network to promote mutual exchange and collaborate for scholarship, research, education and training on global and diverse leadership. Potentially, this network can: build a critical mass of scholars internationally to collaborate on issues in leadership, build a pipeline for leaders in psychology, create leadership development activities and training for new and existing leaders, and to address disparities in leadership via training, policy, and research.

We have created and grown our database of about 50 members and a working committee to plan the International Leadership Network. We are excited to have several meetings of the International Leadership Network in 2016 to plan and development this network and its activities at local and international conferences to include: APA, EPA, IUPsyS, and ICP. We hope to promote the visibility and availability of the Network through social media, APA, Monitor, and division publications.

Several virtual planning and development meetings and the symposium at the recent Eastern Psychological Association identified the following domains for 2016:

1. Training Network: Nancy Sidun and Linda Garcia Shelton are working to develop a mutual exchange for training of psychologists between institutions of higher education.
2. Leadership Research: Jean Lau Chin is working on building a network of cross-national research collaboration on Global and Diverse Leadership. Craig Shealy is doing the same on Authentic Leadership.
3. Leadership Training and Network development at international conferences (e.g., ICP, IUPsyS, IAAP): Richard Velayo is planning several symposia with virtual access and webcasting to develop training opportunities for leadership development, and development of the network. Our goal is to use web conferencing and archiving through video and chat so that the meetings can be made available to those unable to attend, or used for further collaboration and training.
4. Pipeline issues: We intend to promote the development of a younger generation of leaders. Using our division CONNECT and ECP committee, Craig Shealy and Cidna Valentin will explore this issue.
5. Other Suggestions:
   a. Internationalize Curriculum Development
   b. Start a blog to promote dialogue on leadership training, research collaboration, or curriculum development
   c. Develop a database of Leadership Success Stories
   d. Develop a compendium of psychologists in leadership roles
   e. Identify Leadership dilemmas

2016 Events for the International Leadership Network: Launched at the March EPA meeting, we videoconferenced and archived the meeting so that it would be accessible to those unable to attend in person. Please let us know if you would like to attend any of the meetings below.

1. Saturday, March 5 at 3:30 PM EST at the Eastern Psychological Association Convention, New York, NY, USA
2. July 22-July 25 at the International Council of Psychologists Conference, Yokohama, Japan (specific day/time to follow)
3. July 24-July 29 International Union of Psychological Science Conference, Yokohama, Japan (specific day/time to follow)
4. Saturday, August 6 at 10:00 AM UTC at the American Psychological Association Conference, Denver, CO, USA

You can also join our database (which will eventually be transferred to an online searchable database) by filling out a brief survey on: https://www.surveymonkey.com/r/IntnlDatabase

Strategic Planning

We began a planning process to develop a Strategic Plan which will be a blueprint for our division's future to identify "Where have we been?, Where are we now?, and Where might we go? in order to actualize the division's potential on international psychology". This process will continue into 2017 during Craig Shealy's presidency with more specific objectives to promote membership outreach, to revisit the division's identity, and to expand the division's international presence. As Craig says, if our outcome is "to draw upon the extraordinary knowledge, experience, and connections of our distinguished leaders, to create a prominent space for our students and early career colleagues to contribute and be heard, and to be supportive and listen deeply and respectfully to one another, we not only can fulfill our potential as *the* division of international psychology, but also chart a dynamic course together over the next two decades."

Two key questions posed to our EC which I ask all members to also respond to are:

1. What is your vision for how you and the activities you do can help to advance the mission of Division 52 or International Issues?
2. How might Division 52 promote the visibility of international issues specifically as it relates to what you are doing?

Strategic Planning Issues identified at Midwinter included:

1. Being *the* International Division:
   a. How can Division 52 weigh in on APA's role on international issues given that there are Memoranda of Understanding with about 15 psychological associations internationally?
   b. Should we revisit our mission as a division in the 21st century?
   c. How do we strengthen our identity of the division?
   d. How do market our division to be more visible, have our voice heard, and disseminate our positions?
2. Collaboration for research, training and practice:
   a. How do we engage psychologists internationally for research, training, and practice?
   b. Can we create an incentive system for international research collaboration for non-US based APA members to join our division? Many non-US based members are often looking for opportunities to publish in English and U.S journals. For example, a match system to connect US-based psychologists with non-US based psychologists with similar interests.
3. Supporting students and ECPs:
   a. Can we create opportunities both in the US and internationally? For example, international internships, international accreditation.
4. Policy:
   a. Where do we stand on policy and position statements on international issues? For example, advocacy, trauma, humanitarian, immigration, social justice, diversity.
5. Membership Outreach:
   a. How do we capitalize on those attending our Social Hours at conventions to become members of our division, especially the international guests?
   b. We have a much greater readership on our journal than membership in our division. We have more hits on our webpage, followers on our Facebook that is greater than the numbers of our membership. How do we reach them to join?
   c. Include information about the membership benefits on the membership page.
6. Communication and Publications: Promoting International Issues
   a. How can we grow Division 52's capacity to broadcast our EC meetings, convene groups and symposia to enhance our accessibility and importance as an international division? Lucio Forti and Richard Velayo are already beginning to do this and have recorded the EC meeting and International Leadership Network meeting to be made available to members.
   b. How do we promote visibility of our division through our major publication outlets, the newsletter, journal, and book series? It was suggested to have each of our publications promote the products of one another, and cross solicit proposals and submissions.
   c. Division 52 International Psychology Book Series is an untapped resource of the Division. How do we get the word out to solicit more book proposals, mentor potential authors, and be more proactive in making the book series more visible through our website and newsletter? Suggest topics like an internationally oriented multicultural book? Interview individuals using a high quality qualitative method to find out best practices for international psychology?
   d. Increase the use of Social Media to promote the division's visibility and connection with international members, and to promote membership. Announce progress of projects and what's going on in the division on the website and newsletter.

Contact Us

The Division 52 leadership looks forward to engaging with our member to achieve our goals. As president, I especially invite you to join the ongoing discussion through the open forum on the Div52 Listserv or contact me at: ceoservices@yahoo.com If you are not currently a member of the listserv, please send a request to lforti@pace.edu

Call for Nominations
APA Division 52 Henry David International Mentoring Award

Henry David was a founding member of Division 52 and a significant contributor to international psychology. In honor of his contributions, Division 52 established the Henry David International Mentoring Award.

The recipient of this prestigious award will be honored at the 2015 APA Convention in Toronto. Nominations, including self-nominations, are welcomed. The Division 52 Henry David International Mentoring Award is presented annually to a member or affiliate of Division 52, who plays an exceptional mentoring role in an international context. Mentoring may be defined by any of the following activities:

(1) A psychologist who has served as a mentor for international students or faculty member for at least three years.

(2) A psychologist who has mentored students in the area of international psychology, by training, educating, and/or preparing students to be active participants in international psychology.

(3) A senior psychologist who has mentored early career psychologists who are now functioning as international psychologists.

OR

(4) An international psychologist working outside of the United States who serves as a mentor on his/her campus or at his/her agency.

Nominations should include a cover letter, vitae, and at least 3 letters of endorsement from former or current mentees. **Questions about the application procedure and nominations should be emailed to the Henry David International Mentoring Award Committee Chair, Lawrence Gerstein at lgerstein@bsu.edu.** The Committee will review the nominations. The Committee's recommendation will be reported to the Division 52 Board of Directors. **The deadline to submit materials is April 1, 2016.**

The Anne Anastasi Graduate Student Research Award Nomination - International Psychology -

Two Graduate Student Research Awards

Anne Anastasi was president of the American Psychological Association in 1965 and was awarded the National Medal of Science in 1987. She made major conceptual contributions to the understanding of the manner in which psychological development is influenced by environmental and experiential factors. Her writings have provided incisive commentary on test construction and the proper application of psychological tests. She drew attention to the individual being tested and therefore to the responsibilities of the testers. She called for them to go beyond test scores, to search the assessed individuals' history to help them to better understand their own results and themselves. This award is thus named after her and was funded by the Anne Anastasi Foundation.

All Div52 applicants will be considered for this award, however the ones who demonstrate research that focus on psychometrics and differential psychology in respect to Anne Anastasi contributions to the field from an international perspective will be highly considered.

Each awardee will receive $300 and a certificate. The winner will be decided based on the student's vitae and research plan, plus a supporting letter from the student's advisor. There are no restrictions on nominees, self-nominations, as well as nominations by others.

- Deadline: June 7 -

Please send the following materials electronically to the 2016 Chair of the Committee, Suzana Adams, PsyD (suzea@mac.com) and to the members of the Committee, Mercedes A. McCormick PhD (mampsyyoga@aol.com) and Zhipeng Gao (gzhipeng@yorku.ca)

I. Cover Letter with the following information. **Please attach the following checklist with your application.**

- Name
- Email
- Institution
- A mentor's name and his/her email
- Focus of research and title
- There are 2 levels of the Anastasi Award: Students with 2 years or less of graduate study and those with more than 2 years of graduate study. Please indicate (check off) in your cover letter the one that best applies to you:

___Two years or less of study beyond the baccalaureate or

___More than two years beyond the baccalaureate.

- If applicable, year in which masters' degree was completed or projected year in which masters' degree will be completed.

  _____

II. Please add to the Cover Letter the following attachments:

1. Research statement on your past/present/future work (2-3 pages, with limited number of important citations)
2. Your Curriculum Vitae
3. Supporting letter from one mentor, either attached or sent separately

Division 52/Psi Chi International Conference Travel Grant $1,500 US

Call to students living outside the US who are interested in the field of international psychology and plan to attend the August 4-7, 2016 APA Convention in Denver, Colorado!

In 2015, APA Division 52, International Psychology and Psi Chi, the International Honor Society in Psychology, collaborated through the D52 Building Bridges Committee to offer the inaugural **Division 52/Psi Chi International Conference Travel Grant.** In 2016 the travel grant will continue to provide assistance with travel costs to Psi Chi students who live outside the US,are interested in international psychology, and plan to attend and present at the APA convention in Denver, Colorado August 4-7 , 2016.

Eligibility:

1. Must be a current undergraduate psychology major or a student in a graduate psychology program outside the US or a recent graduate (defined as having completed an undergraduate psychology degree between November 1, 2015 and May 1, 2016.
2. At the time of submission, must be currently – and at least through August 2016 – living, working, and/or studying outside the US.
3. Must be a member of Psi Chi at the time of submission.
4. Must be a member of D52 at the time of submission (students may join at any time).
5. Must be able to cover any travel expenses beyond the $1,500 provided by the grant.
6. Must agree to attend and talk for 5-10 minutes about personal interests in international psychology at the D52 Awards Ceremony/ Hospitality Suite Program at the 2016 APA convention.
7. Must attend at least one other D52 session.
8. May not win more than one D52 travel grant.
9. May not win more than one Psi Chi travel grant that can be used to attend APA.
10. Must provide proof of acceptance to present research at the 2016 APA convention in Denver, CO.
11. Acceptance of research for presentation in any format (poster, talk) and within any division or affiliated group (such as Psi Chi) program at the 2016 APA Convention.

To Apply, Students Need to Submit:

I. Description of Interest (maximum 275 words, double-spaced):

1. A description of
   a. your interest in international psychology,
   b. how your participation at the APA Convention will strengthen your professional interest in the field of international psychology,
   c. meaningful experiences in psychology courses,
   d. volunteer experience,
   e. Psi Chi involvement,
   f. Division 52 involvement, if any

II. Eligibility Information:

1. A document or email text providing:
   a. Full name
   b. Contact information (email & phone)
   c. Name of university/college
   d. Name of the undergraduate/graduate department program
   e. Year in the program
   f. Expected graduation date
   g. Member status with D52
   h. Psi Chi member ID
   i. Full name and title of endorsing faculty mentor
   j. Endorsing faculty mentor email address

III. Faculty Mentors submit directly to Drs. McCormick and Zlokovich:

A brief (200 words maximum) document or email that includes:

1. A statement endorsing you for the travel grant,
2. Confirmation that your interest and academic efforts in international psychology will be enhanced by attending the APA convention, and
3. Assurance of your good standing as a student in the undergraduate/graduate psychology program.

Deadline: Before midnight (Eastern Standard Time) June 30, 2016.

Email all application materials to the Building Bridges Committee Chair:

Mercedes A. McCormick, Ph.D.
Chair of APA Div. 52 Committee on Building Bridges With Psi Chi
2013 President of APA Div. 52
Pace University, New York 10038
mmccormick2@pace.edu

Application and Review Process:
Applications will be reviewed by the committee according to completeness of submission and strength of the description of interest in international psychology.

Winner Notification and Obligations:

The grant winner will be notified no later than May 30, 2016 and will be recognized in person at the Division 52 Awards ceremony in Denver, Colorado on August 6th. The winner will present a 5-10 minute talk at the D52 Awards Ceremony on August 6, 2016 on the benefits of being awarded the travel grant. In addition, the grant winner will be featured in an issue of the International Psychology Bulletin.

D52 and Psi Chi will present the winner with a check at the D52 Awards Ceremony after the winner has met all obligations. Obligations are attending the APA convention, attending at least one D52 presentation, presenting research included as part of the travel grant application, and speaking at the D52 Awards Ceremony. Any winner who does not attend the APA convention or D52 Awards Ceremony will not receive the grant funding.

LEAVING A LEGACY TO DIVISION 52

A Call for a Charitable Bequest to APA Division 52

If you are interested in making a charitable bequest or other planned gift to the Division of International Psychology, contact Susan Nolan at (973) 761-9485 or at susan.nolan@shu.edu or Lisa Straus at (202) 336-5843 or at estraus@apa.org.

A DVD about International Psychology: Perspectives and Profiles

Uwe P. Gielen
St. Francis College

Judy Kuriansky
Columbia University

As members of APA's International Psychology Division (52), we have created a DVD that informs students, faculty, professionals and others about the exciting new field of International Psychology. The DVD can be used in the classroom setting or for individual viewing.

The DVD's first section includes a 35-minute documentary entitled *International Psychology: What Students Need to Know*. It includes profiles of various international psychologists; advice for students from international psychologists in different parts of the world; students' descriptions of their international projects and how they have obtained funding; starting a career in International Psychology; activities and opportunities for students at the United Nations; resources to find out about International Psychology; and guidelines about whether International Psychology is a field that fits the student.

The DVD's second section offers an overview of *Pathfinders in International Psychology*, a recent book that traces the history of psychology through profiles of known and not-as-well-known, yet important, psychologists and psychiatrists from different regions of the world. The editors of the volume are leading international psychologists, Dr. Grant J. Rich and Dr. Uwe P. Gielen, who were interviewed by Dr. Judy Kuriansky.

In the 20-minute interview, the book editors offer fresh and illuminating views of historical figures in international psychology as conceived by an international group of contributors. The editors describe the biographies and contributions of 17 psychologists, psychiatrists, and healers who have been active in 14 countries around the world. The recounting begins with the colorful figure of Franz Anton Mesmer (1734-1815) who created and practiced Mesmerism in Austria, France, Germany, and Switzerland, and ends with a recounting of the inspiring biography of the South African anti-apartheid activist and clinical psychologist Sathasivan Cooper (*1950; also known as "Saths"), the current president of the International Union of Psychological Science. Altogether, the book covers a timespan of more than 250 years.

A brief additional video tracks the dramatic life and career of Dr. Cooper by tracing his life as a student in South Africa through his days in the struggle against apartheid, his imprisonment on Robben Island where he shared a cell block with Nelson Mandela, and his evolving career as a noted psychologist.

In Dr. Kuriansky's interview with Dr. Cooper, he discusses the development of psychology in Africa. In this process, he has accomplished many "firsts": he served as the President of the International Congress of Psychology (in 2012) that was held in Africa for the first time; he is currently the first President of the International Union of Psychological Science from the continent of Africa; and he is playing a crucial role in the foundation of the Pan African Psychology Union. The video ends with his hopes for psychology in the future.

A copy of the DVD can be ordered from Uwe P. Gielen (ugielen@hotmail.com). Please include your postal address in your email. The DVD will be sent free of charge (as long as supplies last).

International Perspectives on Humanity's Sustainable Development Goals

Stuart C. Carr

Incoming Editor for *International Perspectives in Psychology* (IPP, 2016)
Poverty Research Group
End Poverty & Inequality Cluster (EPIC)
Massey University
Aoteaoroa/New Zealand

Source: United Nations, 2016

Why is it that the people I meet and show *International Perspectives in Psychology* (IPP) always, palpably, react with excitement? Perhaps it has something to do with the fact that no other journal in psychology has such an ambitious and inspiring goal, or rather, set of goals. The role that this journal has set for itself - becoming the primary source for state-of-the-art information on how psychology can help to tackle human well-being and development - is quite simply unique.

This is certainly a focus with which our New Zealand-based, interdisciplinary team of 20+ academics in the self-explanatory *End Poverty & Inequality Cluster* (EPIC, 2015) identify. Like IPP, EPIC has a focus on global and local issues in everyday life. Our guestimate here in the Western Pacific is that there are many more networks and groups like ours 'out there' internationally, and that IPP is a natural home for us as readers, writers, and contributors.

As Professor Gibbons (2011) cogently captured in her inaugural Editorial, IPP is a journal that will "confront global problems such as poverty, economic disparity, health crises, intergroup antipathy, conflict and natural disasters." IPP promises - like the Division itself - to take psychology beyond its often quite personal individualized outlook towards broader and often structural issues shaping human life. We can do so by "promoting greater global awareness throughout the discipline" and by engaging directly with some of the 21st century's 'wicked issues' (e.g., "initiatives on human rights, international ethics, immigration, women in developing countries… global trauma and disaster, collaboration with international organizations"). IPP is thereby not a repository for cross-country comparisons unless they speak to the well being of the world's citizens; its ethos is heavily applied and inclusive of research, policy and everyday professional practice ("create, distribute, and apply knowledge globally…leave global citizens a bit more connected and adept at solving the world's problems").

In keeping with this vision, the journal and Division's mission includes connecting with practice, policy development and implementation. In the past, Psychology has arguably struggled with this pivotal phase of taking research to society, for evaluation by society and for implementation in society. More recently however, the APA, in collaboration with other groups in Psychology, has made great strides and commitments in convening regularly with major multilateral agencies for human development at the United Nations (UN). The latter are effectively our 'global civil service,' which includes the UN's diverse chapters from UNDP through to ECOSOC.

Collectively these UN chapters have this year launched the "Sustainable Development Goals" (or SDGs). These SDGs have been put together with much international consultation, including some with our own profession. They will guide the resourcing and focus for global human development plans for the next 15 years. Crucially for IPP, and as the graphic at the head of this article indicate, the SDGs overlap remarkably, and perhaps not coincidentally, *with the very goals and mission that IPP has set for its own development*.

Granted that the world's wicked problems like poverty reduction, war and conflict, climate change, gender inequity and socio-economic inequality are inherently interdisciplinary, their solutions must be too. Expanding on IPP's readership and outreach to wider human development circles, for example in development economics, sociology anthropology and community development will enhance IPP's impact. This will enable fulfilment of its mission and purpose. Themed special issues and sections would be one way of enabling people working outside as well as inside of Psychology to easily locate and secure the best possible source of advice on the SDG that matters most to them. In our experience at EPIC there is a huge unmet demand globally regionally and locally for this kind of information, from the academy to the community, which reflects the multidisciplinary ethos of modern policy and practice.

In our view, Editors can and should play an active role in facilitating such outreach and impact, alongside their duties vis-à-vis the psychological community of research practice. Together with Editorial Board members we can be connected with policy-makers, think tanks and networks and be ready to act as a 'connector' between their profession and other networks in research, practice and consultation. This I will endeavour to do during my tenure as Editor of IPP.

Obviously, and as signalled in the inaugural editorial, Special Issues with a single theme are one way to group the material for instant access by focused readers, policy makers, practitioners and consultants. This initiative is already underway. In any case, it can create the journal equivalent of a 'point person' for specific issues on which psychologists and other professionals want information on evidence-based practice. A robust variation on the same basic option might be to include smaller Special Sections within single issues of the journal. These are normally focused on a single topic or sub-group of topics - say three or four papers, sometimes with a lead article and commentaries. This format was successfully applied for instance in the recent "Global Special Issue on Psychology and Poverty Reduction," as reviewed in IPP. The special sections format has also been engagingly applied in Division 14 - SIOP in its official journal *Industrial and Organizational Psychology: Perspectives on Science and Practice*. Decent work, living wages, and sustainable livelihood, clearly have a resonance with IPP and D52's ambit.

The future of any community of applied research practice rests on its early career scholars and practitioners. For the past two decades I have had the privilege to spend a lot of time building friendships and working relationships with emerging career researchers and practitioners from a diverse range of economies, political systems and cultures - including many materially marginalised groups and societies. Such connections are the lifeblood of any journal. They may add an additional pool, actually waves of talent who can be reviewers and proposers of special issue sections, lead articles and reviews for the journal. This kind of carrying capacity broadens international orientation; capacitates. Ultimately it can only enrich the perspectives that frame our research, practice and consultation, and the problems that face Humanity.

APA Council of Representatives Report

Harold Takooshian
D52 Representative, 2010-2015

On 1/1/2016, Neal Rubin began his three-year term as our D52 Representative to APA Council, as I ended my six-year term of 2010-2015. I am reporting here on Council activities up to 2016, and how much our division 52 has changed during these six years, from 2010-2016.

In 2015, we all saw the 160-member Council's near-total focus on "restructuring" eclipsed by another focus--the Hoffman Report--which resulted in one termination and several high-level retirements/resignations/recusals. APA President (and D52 Fellow) Barry Anton presided over a turbulent August meeting of Council in Toronto, where media assembled to broadcast the final vote (photo below). This Hoffman Report will continue to reverberate in Council in coming months (APA, 2015).

What is less publicized is the financial aspects of the Hoffman report. This was not clear at first, until Council requested and received a break-down of expenses to the Association, noted in Table 1 below. It was reported that APA Counsel's office, under attorney Nathalie Gilfoyle, initially allocated an estimated $400,000 for the cost of this independent report. When David Hoffman's law firm of Sidley Austin soon informed APA that this sum was inadequate, it was not feasible for APA to do anything but continue funding this IR, which eventually swelled ten-fold to $4-million. There were also ancillary expenses, which brought the total closer to $5-million, and rising. APA hopes to develop some strategy to replenish this unexpected expenditure in coming years. APA later posted 42 changes in the original report, now posted at http://www.apa.org/independent-review/index.aspx.

Table 1. Costs of the Investigative Report, as of 2015

	Hours	Fees	Expenses
Sidley Austin (David Hoffman)	10,0002	$3,945,692	$142,173
Wilmer Hale (APA outside counsel)	877	$654,369	$6,093
Powell Tate (Public relations)	492	$174,264	$632
Covington & Burlington (Insurance)	28	$16,233	$116
Transperfect (Transcription)		$2,415	$0
TOTAL	11,399	$4,792,973	$149,014

In my six years on Council in 2010-2015, I have seen our fine D52 change in many ways. Back on March 5, 2010, at our D52 board dinner at Saint Francis College, during the EPA meeting in Brooklyn NY, then-President Danny Wedding was cheered as he described D52 as "the friendliest division in APA." A NYU student from Italy, Guilia Landi, wrote in our *International Psychology Bulletin* how attracted she was at EPA by the large room full of smiling faces. "Going to EPA and discovering all the opportunities within Division 52... I am extremely grateful to Dr. Rivka Meir... and would like to share the Division's vibrant and wide-reaching initiatives with other students" (Landi, 2010, p. 9). At EPA 2010, our D52 hosted ten packed sessions in two days, where, like Jennifer Doran (Stowell & Doran, 2010), Ms. Landi was one of over 50 students and professionals who submitted a D52 application to our Outreach Chair Rivka Meir to join D52.

Growth. As of 2010, D52 was a friendly and growing division, for many reasons. (1) Thanks to our past-President Gloria Gottsegen, our bylaws are highly democratic and transparent, requiring open meetings of the board (section 4.4), and a transparent election process where the candidates with the most nominations are put on the slate (section 7.3). (2) Semi-annual board meetings resembled reunions of old friends, and board minutes were published in the D52 Bulletin. (3) There was a healthy succession system, where students and ECPs were welcome to join committees and gain experience in D52 before becoming chairs, then stand for election as officers and possibly President.

Decline. As of 2016, it is sad to see so many negative trends in our division. Most obviously, APA (2016) data finds our D52 membership is now plummeting since 2011. When Table 2 compares four APA divisions formed since 1996, three have grown over 1,000 paid members, while D52 is now dropping since 2011, from 629 to 543. The same is true of our annual D52 apportionment ballot, where each member has 10 votes, and D52 has been plummeting towards zero votes: from 442 (2013), to 425 (2014), to 376 (2015), 330 (2016), to 305 (2017). Not least of all, board meetings since 2013 are often less than friendly, when some hard-working members are involuntarily removed from their roles, leaving others to avoid the division and its meetings. At our August 2014 board meeting, someone posted a uniformed guard at the door to eject unwanted members, while an APA lawyer actively participated in the meeting. Some are now proposing that D52 changes its democratic bylaws (above) in ways to reduce transparency (though this first requires a 2/3 vote of the membership). In March of 2016 at EPA, with no D52 outreach committee, the D52 room was virtually empty for most of two days, with not a single D52 application in sight--so different from EPA 2010 and 2013 (Takooshian, 2013).

At a time when psychology now grows faster outside than inside North America (Zoma & Gielen, 2015), it is a sad irony that our growing division is now losing members (APA, 2016). Happily, our sedulous President Jean Chin has proposed a bold new International Leadership Network (ILN), to engage nonmembers. Sadly, more reforms are clearly needed, to re-create the value of D52 that attracted students like Giulia Landi in 2010.

On a personal note, it has been my pleasure to serve Division 52 as its Council representative the past six years. As one of the co-founders of our Division in 1997, I was honored to serve faithfully the Division on Council the past six years.

Abstract

Whether physicians or other caregivers should intervene to end terminally-ill patients' lives has always been controversial. In euthanasia, physicians intervene directly and purposely to end patients' lives whereas in physician-assisted suicide (PAS) physicians provide patients with the means to end their lives by themselves. Studies examining the circumstances under which lay people consider PAS as acceptable and using the same set of realistic vignettes were conducted in five countries with quite different cultures: France, India, Kuwait, Togo, and Turkey. The vignettes depicting the condition of terminally-ill patients included information about the patient's age, the level of incurability of the illness, the type of suffering, and the extent to which the patient requests a life-ending procedure. A single cluster analysis performed on these five sets of data found eight qualitatively-different positions among participants: (a) PAS is never acceptable, (b) it is not very acceptable, (c) it depends on the type of suffering, (d) it depends on the level of curability, (e) it depends on the patient's age, (f) it depends on the patient's request and age, (g) it depends on the patient's request, and (h) it is mainly acceptable. Most participants were not systematically opposed to PAS. The most important factor in providing acceptability was advanced age. The dominant principle guiding participants' views was non-malevolence (not jeopardizing the patient's access to heaven). This principle tended to be superseded by principles of benevolence, autonomy and justice as religious beliefs vanished.

Keywords: physician-assisted-suicide, France, India, Kuwait, Togo, Turkey

The most controversial end-of-life decisions are those in which physicians actively help patients to die. In the case of physician-assisted suicide (PAS), patients are provided with the means to end their own life. Since patients themselves perform the lethal action – for example, by ingesting a solution of sodium pentobarbital -- the procedure is at their request and with their consent. In euthanasia, the physician either directly intervenes to end the patient's life (active euthanasia) or withholds or withdraws treatment needed to maintain life (passive euthanasia). The current study is a reanalysis of previously published data on people's views regarding the acceptability of PAS gathered in five culturally very different countries: France, India, Kuwait, Togo, and Turkey. Its main findings are discussed in lights of the four principles of bioethics suggested by Beauchamp and Childress (2001): autonomy, benevolence, non-malevolence and justice.

Legislation has been passed recently to permit and regulate euthanasia and PAS in the Netherlands and Luxembourg; euthanasia in Belgium and Colombia; and PAS in Germany and in the United States of California, Montana, Oregon, Vermont, and Washington (Steck, Egger, Maessen, Reisch, & Zwahlen, 2013; State-by-State Guide to Physician-Assisted Suicide, 2015). Similar legislation is under discussion in other U.S. states and elsewhere in the world, including in India (Mahapatra, 2011). It is important, therefore, for caregivers and policy makers around the world to appreciate the conditions under which end- of-life decisions are or are not acceptable to the public.

Assessing People's Views

Varied methodologies have been used to assess the overall level of acceptability of helping to end a patient's life and the main factors that affect people's acceptability judgments. Most investigators have used questionnaires. For instance, in the study by Cohen, van Landeghem, Carpentier and Deliens (2014), participants from 47 European countries were asked: "Please tell me whether you think euthanasia (terminating the life of the incurably sick) can always be justified, never be justified, or something in between"? (p. 144). The mean ratings in each country ranged from 1.52 to 6.79 (out of 10), indicating much greater acceptance in some countries (e.g., France: 6.75) than in other countries (e.g., Turkey: 2.21).

Other researchers have focused on the circumstances under which end-of-life decisions are considered as acceptable or not, using realistic vignettes (Anderson, 2008). For example, Kamble, Sorum, and Mullet (2012) presented Indian students with 36 scenarios depicting the condition of terminally ill patients, composed according to a four within-subject factor design. The information included (a) the patient's age (35, 60, or 85 years), (b) the level of incurability (or curability) of the illness (completely incurable or extremely difficult to cure), (c) the type of suffering (extreme physical pain or complete dependence), and (d) the extent to which the patient requests a life-ending procedure, euthanasia or PAS (no request, some form of request, or repeated formal requests). The authors observed wide differences in participants' response patterns, which they examined through cluster analysis. They found three contrasting positions. For 42%, PAS was clearly unacceptable if the patient was young, but it was clearly acceptable if elderly, and more so if the patient requested it. For 29%, it was mainly acceptable, but less so if the patient was younger or did not request it. For another 29%, it was mainly unacceptable, but less so if the patient was older or requested it. The material used by Kamble and colleagues (2012) in India has also been applied to samples of people in four other countries: (a) Kuwaiti students (Ahmed, Sorum, & Mullet, 2010), (b) French adults (Munoz Sastre, Gonzales, Lhermite, & Mullet, 2010), (c) Togolese adults (Kpanake, Sorum, & Mullet, 2013), and (d) young Turks (Bugay, Sorum, & Mullet, 2014). In each case, qualitatively different positions have also been found, and these positions are summarized in Table 1.

Table 1

Positions Regarding End-of-Life Decisions Observed in Previous Studies and Countries in which the Position has been Observed

Position	Overall Range of Ratings	Effects Observed	Countries
A. Never acceptable	All ratings very close to the zero end of the acceptability scale	No effects	Kuwait, Togo
B. Not very acceptable	All ratings in the unacceptability side of the response scale	Weak effect of patient's age	Kuwait, India
C. Type of suffering	Most ratings in the unacceptability side of the response scale except in the case of complete dependence	Effects of type of suffering, request and incurability	Kuwait
D. Incurability of the Illness	Ratings ranging between the two ends of the scale	Effects of incurability of the illness, patient's request and patient's age	Togo
E. Patient's Age	Ratings ranging between the two ends of the scale	Strong effect of patient's age, weak effect of request	India, Kuwait
F. Patient's Request	Ratings ranging between the two ends of the scale	Strong effect of patient's request	France
G. Mainly Acceptable	Most ratings in the acceptability side of the response scale	Weak effects of patient's request and patient's age	France, India

They varied from not acceptable irrespective of circumstances (the majority position in Kuwait), to mainly acceptable if patients requested it (the majority position in France), or acceptable if patients were elderly people (a common position in India). In Togo, the curability factor had a stronger impact than in other countries: when the illness was not completely incurable, the acceptability level was lower than when the illness was difficult to treat. For some people, the type of suffering matters, as among a minority of Kuwaiti for whom acceptability was lower in case of physical pain than in case of complete dependence.

A Reanalysis

Since the data from these studies were analyzed separately, however, direct comparisons between countries are difficult. In this article, we present the results of a single cluster analysis conducted on the whole set of data gathered in these five countries (Table 2). An analysis performed on a larger sample may, in addition, allow the detection of positions, especially minority positions that were missed in each separate analysis conducted at a country level. Furthermore, such an analysis may offer the common framework that is needed when direct international comparisons are made.

The five countries differ considerably in religious and philosophical backgrounds regarding life and death issues. According to Islamic bioethics, "the killing of a terminally ill person, whether through voluntary active euthanasia or physician-assisted suicide, is judged an act of disobedience against God" (Sachedina, 2005, p. 779). In the Hindu tradition, death is not the end of life but a transition through rebirth, between two successive lives in two different bodies (Desai, 1988). As a result, maintaining life at all costs is not viewed as an imperative. In Togo, the death of an old person, in contrast to the death of a young person, is considered a great blessing for the whole society since it is seen as a ritual of passage into becoming an ancestor; that is, into the highest stage of the developmental trajectory of personhood (Moore, 2007). France is now a largely secular country where, regarding end-of-life issues, most people believe in the right to self-determination (Cohen et al., 2014). Finally, Turkey has a predominantly Muslim population, but, in contrast to Kuwait, a secular civil society, leading to divisions of many social issue, including end-of-life decision making (Karadeniz et al., 2008). As a result and as already shown in Table 1, a rich diversity of positions may be expected even if the number of countries considered is small.

Method

The participants in the five subsamples were either (a) adults in countries in which surveying people on societal issues was feasible and relatively common practice (France, Togo) or (b) university students in countries where surveying adults was not feasible (Kuwait, India). The material was described in the Introduction: a set of 36 scenarios indicating the patient' age, the level of incurability (or curability) of the illness, the type of suffering, and the extent to which the patient requests a life-ending procedure. An example of a vignette is the following: "Mrs. Silva is 85 years old. She has a serious illness, totally incurable given current knowledge. She is currently receiving the best possible treatment. She is completely dependent; she cannot breathe by herself and she cannot feed herself. She has asked clearly and repeatedly to resort to euthanasia or physician assisted suicide. Do you think physician assisted suicide would be an acceptable procedure in this case"? Adults were contacted in the streets of big cities, and university students were contacted on campus.

Table 2

Demographic Characteristics of the Five Subsamples

Country	*N*	Type of Participants	Mean Age (*SD*)	Percent. Females	Percent. Believers	Percent. Attendees
Kuwait	330	Students	20.80 (1.77)	67	100	100
Togo	302	Adults	32.35 (12.19)	52	96	
Turkey	129	Young people	25.92 (9.22)	48	100	
India	293	Students	22.86 (2.50)	62		92
France	292	Adults	35.59 (14.94)	53	48	9

Note: When data were not available, cells were empty. "Believers" refers to believers in God. "Attendees" refers to worship's regular attendees.

Results

A cluster analysis was performed on these data in accordance with the recommendations of Hofmans and Mullet (2013); that is, we used K-means clustering (Euclidian distances), a nonhierarchical centroid-based method. Nine clusters of participants were identified. Six of them are shown in Figure 1, with the mean acceptability ratings pooled across the levels of incurability and types of suffering. The three remaining ones are shown in Figure 2. Table 3 shows the percentages of participants from each country in each cluster.

The first cluster (n = 270) was the *Never Acceptable* cluster expected on the basis of prior studies (see Table 1). The responses were always very close to the unacceptability side of the scale (M = .21, SD = .29), and no effect of any factor was detected. The second cluster (n = 132) was the *Not Very Acceptable* cluster. The responses were mostly low but nevertheless significantly higher than in the first cluster (M = 1.80, SD = .54). The request by age interaction was significant, $F(4, 520) = 10.89$, $p < .001$, $\eta_p^2 = .08$.

The third cluster (n = 60, see Figure 2) was the *Type of Suffering* cluster (M = 3.03, SD = 0.65). Suffering was significant, $F(1, 118) = 109.65$, $p < .001$, $\eta_p^2 = .65$, as well as the Suffering x Request interaction, $F(2, 118) = 12.94$, $p < .001$, $\eta_p^2 = .18$. The fourth (n = 45) was the expected *Incurability of Illness* cluster (M = 4.80, SD = .90). Incurability was significant, $F(1, 44) = 395.37$, $p < .001$, $\eta_p^2 = .90$, as well as Request and Age, $F(2, 88) = 33.46$ and 32.40, respectively, $p < .001$, $\eta_p^2 = .43$ and .42.

The fifth cluster (n = 242, see Figure 1) was the expected *Patient's Age* cluster (M = 5.16, SD = 1.07). Request and Age were significant, $F(2, 482) = 105.95$ and 1,285.00, respectively, $p < .001$, $\eta_p^2 = .31$ and .84. The sixth cluster (N = 73) was not expected (see Figure 2). The response pattern was similar to the one observed in the *Not Very Acceptable* cluster except that most values were higher (M = 4.54, SD = .75). It was termed *Request* x *Age* because of the strong interaction between these factors, $F(4, 288) = 46.58$, $p < .001$, $\eta_p^2 = .39$.

Figure 1

Patterns of Results Corresponding to Six of the Nine Clusters

Note: In each panel, the mean acceptability judgments are on the y-axis, the three levels of patient request (No = No request, and Rep. = Repeated request) are on the x-axis, and the three curves correspond to the three levels of patient age.

Figure 2.

Patterns of Results Corresponding to the Three Additional Clusters. *Note*: In each panel, the mean acceptability judgments are on the y-axis, the three levels of patient request are on the x-axis, and the three curves correspond to the three levels of patient age. The two panels in each row correspond to the two levels of the Curability factor or of the Type of Suffering factor.

Table 3

Number and Percentage of Participants in the Nine Clusters per Country

Cluster	Kuwait	Togo	Turkey	India	France	Total
1-Never Acceptable	*159 (59)*	72 (27)	27 (10)	4 (1)	8 (3)	270
2-Not Very Acceptable	*65 (49)*	36 (27)	6 (5)	15 (11)	10 (8)	132
3-Type of Suffering	*20 (33)*	*25 (42)*	8 (13)	7 (12)	0 (0)	60
4-Incurability	0 (0)	*40 (89)*	1 (2)	1 (2)	3 (7)	45
5-Patient's Age	30 (12)	55 (22)	31 (13)	*118 (48)*	11 (4)	245
6-Request x Age	8 (11)	20 (27)	4 (5)	*35 (47)*	7 (9)	74
7-Patient's Request	12 (9)	12 (9)	18 (13)	5 (4)	*93 (66)*	140
8-Mainly Acceptable	9 (3)	29 (11)	26 (10)	54 (21)	*141 (54)*	259
9-Undecided	27 (22)	13 (11)	8 (7)	*54 (45)*	19 (16)	121
Total	330	302	129	293	292	1346

The seventh cluster (n = 140) was the expected *Patient's Request* cluster (M = 4.82, SD = 1.19). Request and Age were significant, $F(2, 278) = 939.70$ and 49.80, respectively, $p < .001$, $\eta_p^2 = .87$ and .26. The eighth (n = 259) was the expected *Mainly Acceptable* cluster. The responses were always much closer to the acceptability than to the unacceptability side of the scale (M = 7.47, SD = 1.13). Request and Age were significant, $F(2, 510) = 344.04$ and 179.62, respectively, $p < .001$, $\eta_p^2 = .57$ and .41. Finally, the ninth cluster (n = 121) was not expected. It was termed *Undecided* because the responses were always close to the middle of the scale (M = 4.62, SD = .69). Request and Age were, however, significant, $F(2, 236) = 10.98$ and 23.58, respectively, $\eta_p^2 = .09$ and .17.

Figure 3 shows the Euclidian distances between the clusters' profiles of mean ratings. Three meta-positions can be distinguished: Not acceptable (including Depends on type of suffering), Mainly acceptable, and Depends on circumstances. Figure 4 shows the distances between countries' mean profiles of ratings. India and France were clearly at variance from the other three countries.

Figure 3.

Dendogram Showing the Euclidian Distances between the Eight Clusters Corresponding to a Clear Position. Note: Mainly = Mainly acceptable, Request = Depends on patient's level of request, Curability = Depends on the level of curability of the illness, Age = Depends on patient's age, R x A = Depends interactively on patient's age and request, Suffering = Depends on type of suffering, Not Very = Not very acceptable, Never = Never acceptable.

Figure 4.

Dendogram Showing the Euclidian Distances between the Five Countries

Discussion

The study compared the views on the acceptability of PAS of people from five culturally very different countries. It is clear that these views cannot be summarized easily as single values along an acceptability/unacceptability dimension. Most of the time, circumstances mattered, and the circumstances that mattered most differed from one person to another, and all the more so if these persons lived in different countries. These findings are consistent with the view of Cohen et al. (2014, p. 150) that "euthanasia attitudes should be seen as a complex, multi-faceted concept."

Only in Kuwait, where most participants were practicing Muslims, did circumstances matter little: for 68% of them, PAS was never acceptable. Nonetheless, for a minority of them, one circumstance was decisive: the patients' age. When an elderly patient was suffering unbearable pain, they considered PAS as acceptable.

Among Togolese participants, the impact of circumstances was stronger than among the Kuwaiti. Although 36% of them also considered that PAS was not acceptable, 51% took at least one circumstance into account--the patient's age, the level of curability of the illness, or the type of suffering. The great importance given to patient's age by some participants is consistent with the traditional Western African view that, as indicated earlier, the death of an old person is considered a great blessing for the whole society. The importance given to the curability of the illness may reflect a tendency in a country where medical resources are scarce to interpret "difficult to treat" as indicating instead the difficulty of obtaining the treatment or its high cost to the family.

Among Turkish participants, circumstances also mattered more than among the Kuwaiti. If 26% were hostile to PAS, 48% took, like Togolese participants, at least one circumstance into account. In addition, 20% per cent were of the view that PAS was a quite acceptable procedure in all the cases presented. The sensitivity of some participants to the request factor was consistent with findings from a study of Turkish students (Özkara, 2004) showing that about nine out of ten of them agreed with the view that "everyone has the right to decide about his or her own life and health."

Among Indian participants, the most frequent position (52%) was that acceptability depended on the patient's age (except for some participants for whom age made no difference if the patient made no explicit request). In addition, 18% were of the view that PAS was quite acceptable in all the cases presented. The importance given to the patient's age was consistent with the idea that death can, from a traditional Hindu viewpoint, be either good or bad (Firth, 2005). Good deaths are non-violent deaths that occur at the right time, that is, in old age, when the dying person has had time to resolve conflicts. The high percentage of undecided people (18%) might, however, stem from the absence of an official body to define Hindu orthodoxy, which allows people to take different positions on end-of-life questions and, in some cases, to remain undecided. Finally, among French participants, the most frequent positions were that PAS was a quite acceptable procedure in all the cases presented (48%) and that acceptability largely depended on patient request (32%). This finding was consistent with those of Cohen et al. (2014).

The study has limitations. First, the groups of participants were always convenience samples, of moderate size, and, in two cases, restricted to university students from only one site. Generalizations must, therefore, be made with care, especially since the variance in responses might reflect the difference in developmental stage of the participants and not the difference in the culture in which they lived. It would be important, therefore, to repeat the study in India, Kuwait, and Turkey, as well as in other countries, using old as well as young participants. Second, the participants responded to realistic vignettes but not to real patients. Third, the researchers did not ask further questions to elucidate, from the participants' perspectives, the reasons for the responses given in each case.

Owing to the great diversity of positions found, it may seem that the four principles of bioethics suggested by Beauchamp and Childress (2001) may fail to offer a convincing interpretative framework. We do not think so, however. In our view, when Kuwaiti participants considered that in no case was PAS acceptable, they applied their own version of the non-malevolence principle: (a) it would be risky for the ill person to disobey God's command because access to heaven could, as a result, be denied, and (b) it would be risky to the physician, for the same kind of reason, to help the patient to die (Sachedina, 2009). In the same vein, when Indian participants considered that the patient's age was the main determinant of acceptability, they also applied their own version of this principle: in the case of a young patient who is going to experience "bad death", any human intervention runs the risk of introducing severe perturbations into the karmic cycle of life (Desai, 1988). Table 4 presents an interpretation, in terms of the four principles, of the various positions found in the present study. This table shows, in particular, that the autonomy principle, which is highly valued in western countries, rarely applies.

In summary, (a) most participants did not appear to be systematically opposed to PAS; (b) the most important factor, overall, in providing acceptability was advanced age; (c) additional acceptability was, in some cases, provided by the patient's request or the type of suffering or the level of curability of the illness; (d) the dominant principle of bioethics intuitively applied by participants was the principle of non-malevolence, the meaning of which appeared to be not to interfere with God's or the gods' plan; (e) this principle tended to be superseded by the other principles as religious beliefs vanished; and (f) it was only in a secular country (France) that the principle of autonomy was dominant.

Table 4

Analysis of the Eight Positions in Terms of the Four Principles of Bioethics

Position	Overall Percentage	Main Principles Involved	Rationale
1-Never Acceptable	20	Non-malevolence	Not interfering with God's commands, which would be risky for the patient after her death (and also for the helper).
2-Not Very Acceptable	10	Non-malevolence and Benevolence	Not interfering with God's commands although it is tempting to put an end to the patient's suffering
3-Type of Suffering	4	Non-malevolence and Benevolence	Not interfering with God's commands although it is tempting to put an end to the patient's life when it has become meaningless
4-Incurability	3	Non-malevolence and Justice	Not killing a patient who could be cured if adequate care was available
5-Patient's Age	18	Non-malevolence	Not interfering with Karma; that is, when the patient is too young to experience "good death".
6-Request x Age	5	Non-malevolence and Autonomy	Not interfering with Karma and, at the same time, respecting the patient wishes
7-Patient's Request	10	Autonomy and Justice	Strictly respecting the patients' wishes, irrespective of their personal characteristics
8-Mainly Acceptable	19	Benevolence	Putting an end to the patient's suffering

Experience of Chinese Immigrant Parents in the United States in an Advocacy-Based Group (POWER) during Initial Settlement

Abstract

Migration is often a disorienting experience for immigrants, especially for new immigrants who migrate with children as they have additional challenges to ensure that their children's needs are met. Research recommends the advocacy-based theory for social services when working with new immigrants. The purpose of this study was to evaluate one such social services program, the POWER parent program, from the perspectives of new immigrant parents. The goal of this program was to strengthen the college-going culture for low-income immigrant communities in NYC by focusing on promoting advocacy and leadership skills among new parent immigrants with high-school aged children. Using a focus group and the method of content analysis, this study aimed to evaluate the experience of the new Chinese immigrant parents (n = 12) who attended POWER, the advocacy-based leadership program in New York City, between 2010-2012. Qualitative content analysis yielded 6 main themes. The emerging themes revealed that the parents have a strong desire and expectations of themselves to be both a good parent and a good US citizen, and attending POWER helps them increase necessary knowledge and skills, address the communication problem with their children, and empowers them to help other immigrant parents in their community.

Keywords: New Immigrants, Parent-Child Relationship, Advocacy-based Social Services, School Achievement, Cultural Competence

People are moving across the globe in unprecedented rates and numbers, with an estimate of over 200 million migrants in the world, and the U.S. has more migrants than any other country in the world (United Nations Population Fund [UNPF], 2015). Global migration has increased and become a complex issue that requires the evolution of public policies, including policies concerning social services, to address the complex needs of migrants. Migrants relocate for many reasons. Many relocate in order to escape persecution or to obtain better living conditions and opportunities. The experience of migration itself presents a challenge in terms of adjusting to a new country and culture, as well as doing so with limited resources. Recognizing new immigrants as change agents for the success of their community's settlement, advocacy-based approaches of services such as the community-organizing model (Biklen, 1983) may be used to improve immigrants' quality of life and success in settlement in the host country (Chang-Muy & Congress, 2009). These advocacy-based approaches strive to address immigrants' needs, empower them to recognize sociopolitical and structural aspects of their lives, and eventually become an advocate for themselves and their communities in their endeavor to become American. There is little research in general on the experience of new immigrant parents, especially those immigrating with children as they try to settle in the U.S., trying to meet the needs of their own and their children. The purpose

of this study was to examine the experience of immigrant parents with high school-aged children who participated in a New York-based advocacy program, POWER.

The Needs of New Immigrants with Children

For migrants, no matter what type of migration, settlement can occur in three stages: pre-settlement, on arrival or initial settlement, and post settlement (Singer & Wilson, 2006). Each stage may require a varying amount of time for each immigrant and family. Settlement and integration services targeting immigrant parents and children need to recognize these stages and aim to provide assistance unique for each stage. For many, pre-settlement is fraught with trauma and hardship. When immigrant families, especially low-income and poorly educated families, first attempt to settle in the new country, they may need substantial assistance just to survive (Yoshikawa, Weiland, Ulverstad, Perreira, & Crosnoe, 2014). Literature shows that at the intial settlement, many new immigrants may have unrealistic and often inaccurate expectations of life in their new country (Newland, Tanaka, & Barker, 2007). These expectations may in part be fueled by the host community's general expectation that the migrant become independent after the initial settlement stage (The Department of Labour, 2008). These expectations may cause added and intensified distress to the immigrants upon their arrival as well as tensions between them and the services of the host community.

New immigrants are uniquely challenged by many immediate needs, such as housing, food, employment, learning the new language, culture, and system, and many experience social isolation, culture shock, and discrimination from anti-migrant sentiment in the host country (Meleis, 2010). Immigrants with children also have their children's needs to be concerned about, especially high school-aged children, who may have more difficulty adjusting to the linguistic, social, and cultural challenges than younger children (Goldner & Epstein, 2014). Suárez-Orozco & Suárez-Orozco (2002) stated that immigrant parents often hold the belief that their children will have better educational opportunities and these parents begin to focus sharply on their children's education and schooling for a better future, which in the minds of the parents will make their sacrifice of leaving their home country worthwhile. The adjustment outcomes of immigrant parents are often related to the academic success of their children (Pong & Landale, 2013; Shields & Behrman, 2004). When settlement presents these parents with roadblocks, such as the challenging path to citizenship, unemployment, difficulty with acculturation, then the success of their children becomes these parents' main aspiration and hope (Goldenberg, 2001). While research has suggested that the intergenerational relationships between immigrants and their children in the U.S. have positive predictive effects for the health and wellbeing for both (Crosnoe, 2010), many Chinese immigrants experience extreme parental pressure that may be counterproductive for their growth (Zhou, 1997). This issue is even more likely to be intensified among recent immigrants with limited financial and informational resources who live at or below the poverty line.

Among new immigrants living in poverty in the U.S., high rates of problems have been documented, including mental health and impaired academic functioning (Pumariega, Rothe, & Pumariega, 2005). Research shows that immigrant students are among the populations that have the highest premature school dropout rates (Goldner & Epstein, 2014). For parents with high school-aged students, the needs of their children often involve important issues that the parents do not know how to remedy, such as how to navigate the American school system, the standardized tests, and college and financial aid applications (i.e., the Free Application for Federal Student Aid or FAFSA). These issues are substantially more difficult for immigrant parents with limited English proficiency. In addition, there are other needs of adolescents/emerging young adults that immigrant parents have to be aware of, such as peer relationships, potential dating issues, and cultural adaptation in the school environment (Juang, Syed, & Takagi, 2007). Social service programs that work with immigrant parents of high school-aged children may encounter these complex needs in their clients (Morse, 2005).

Advocacy-based programs for marginalized populations often aim to increase a sense of hope and a belief that every family and community has strengths, despite their compromised situation (Bruner & Rapp, 2001), through community engagement and organizing (Biklen, 1983). Specifically for immigrants, the advocacy-based approach entails a practice that examines ecological resources to support change and growth and manages to meet immigrants' unique needs (Cicchetti, Rappaport, Sandler, & Weissberg, 2000), and fosters cultural competence to target needs and strengths that exist in the minority children's cultural group (Cross, Bazron, Dennis, & Isaacs, 1989; Niessen & Schibel, 2007). A longitudinal study examining the effectiveness of a community-based advocacy and learning program for Hmong refugees found that over the course of the intervention, the migrants' levels of distress decreased, and the following outcomes increased: participants' quality of life, satisfaction with resources, English proficiency, and knowledge for the U.S. citizenship exam (Goodkind, 2005).

Overall, the effectiveness of these services are contingent upon the clarity and timeliness of the targeted needs of both the parents and their children and the connection they have with other community members within a specific location in which they are being settled.

New Wave of Asian American Immigrants in New York City

Immigrants have increasingly comprised the large portion of the U.S. population. As a racial group, Asian Pacific Americans (APA) have the highest percentage growth (46%) between the 2000 and 2010 censuses compared to other major race groups (U.S. Census, 2012). New York City (NYC) has the largest APA population of any U.S. city, making up approximately 15% of the city's population (Asian American Federation, 2012). According to the latest census, Chinese are the largest Asian group in New York City, with

more than a half million residents and expanding 34% from 2000 to 2010 (Asian American Federation, 2012). About one quarter of APA children in NYC are foreign born, and about half of APA youth live below the poverty line and in linguistic isolated households (CEO, 2013). The new wave of Chinese immigrants in the past decade is mostly from the Fuzhou province in China (Guest, 2003), who tend to speak solely Mandarin and the Fuzhou dialect at home.

Despite the illusion that Asian immigrants represent a 'model minority' and fare better than other ethnic minority groups, there is large variation along the lines of class and history of migration in Asian populations (Abelmann & Lie, 1995; spiritu, 1997; Kao & Tienda, 1998; Sue & Okazaki, 1990). Chinese immigrant workers in NYC are nearly twice (1.8 times) as likely to earn minimum wages as native-born workers (US Census, 2006). In NYC, foreign-born adults with low incomes are less likely to have Medicaid than the U.S.-born (29% vs. 42%; NYC Department of Health and Mental Hygiene, 2006).

Considering these needs, many immigrants face particular challenges when it comes to supporting their children in schools. Immigrant families often lack the knowledge of systems and resources, leaving their children in school feeling isolated and marginalized as they navigate the system alone. NYC Department of Education (2006) reported that 1 in 4 APA high school students does not graduate on time or at all; 1 in 5 APA students is an English language learner (ELL); and 30% of APA ELL students prematurely dropped out of schools in 2005-2006.

The POWER group

To address the needs of APA families, a program titled POWER was launched by the Coalition of Asian American Children and Families (CACF). Based in NYC and formed in 1986, CACF is a pan-Asian children's advocacy organization that fights for improved policies, services and funding for APA youth and families. In partnership with a local community site, Asian Americans for Equality (AAFE), the POWER group was CACF and AAFE's parent leadership program focused specifically on APA immigrant parents in the community of Flushing, Queens. The goal of this program was to strengthen the college-going culture for low-income minority communities in NYC, particularly in the targeted neighborhood of Flushing, Queens. Flushing is home to one of the largest dynamic Asian communities in NYC, with Asians comprising 71% of the residents (Asian American Federation, 2012).

As a concentrated immigrant population in the area, many residents in Flushing face challenges in pursuing education due to linguistic, cultural and economic barriers. CACF and AAFE worked with the administration, staff, youth and parents of 2 local high schools in the community. Many of the families that CACF and AAFE worked with are not just the first to be en route to attend college in the US, but the first in their family to attend any type of higher education. Each year, this POWER group consists of 12-15 parents, all of whom are living at or below the poverty line and speak solely Chinese-Mandarin and Fuzhou dialect at home. Since it is based in Flushing, this particular program cohort, the POWER parents, were recruited from the 2 local high schools. There was a multi-prong approach in recruitment for the POWER parents. There were recruitment workshops held throughout the first year of our Flushing program aimed for parents to participate at the start of the next academic year. The CACF's staff managing this program was bilingual, and the workshops were held in Chinese, and all of the recruitment materials sent out were translated into Chinese. Flyers and recruitment information were also mailed and sent home to every Asian parent. In addition to recruitment workshops, CACF staff also attended the Parent-Teacher Association meetings and the Parent-Teacher conferences at the schools. At the parent teacher conference, CACF staff would assist in interpretations at the meetings. This provided more face-time with the parents while generating trust and buy-in from the immigrant parents, as they now would perceive the CACF staff member as a resource at the school. In doing so, a relationship was formed, and parents became more inclined to attend school events whenever the outreach was performed by the CACF staff member, in addition to enrolling in the POWER leadership program. The POWER program recommended that the parents commit to one full academic year by attending a 2-hour session each month. The parents were also encouraged to attend their child's parent teacher conferences and their PTA meetings. One of the goals for this program was to increase parent engagement in both formal and informal settings. During the monthly sessions, a variety of topics were covered. There were know-your-rights workshops for parents attending a NYC public school, which would entail their rights to language access in schools, the structure of public school systems, as well as pathways to graduation. There were also workshops on college readiness, which included financial aid, the different types of colleges, and the different criteria that colleges look for. Other workshops entailed parent engagement, financial literacy, cultural competency, and advocacy. These included information on the larger community and on the history of Asians in the United States and examined the different values and cultural expectations between an Asian context and an American context. In addition to these monthly meetings, there were supplemental events such as the program launch event, graduation event, free English language courses and college trips. In Flushing, one of the events the POWER parents organized was a college workshop for other Asian immigrant parents. The goal of the POWER program was to develop the parents' capacity in their own active engagement as members and organizers of the program, enable them to better support their immigrant families at home, in the school, and in the larger community, and focus on long terms goals such as college readiness.

Purpose of the present study

The present study aimed to explore the experience of new immigrant parents who migrated within the last two years of the study and participated in the POWER program,

an advocacy-based group. Specifically, the study proposed to examine (1) the needs and challenges of new Chinese immigrant parents and (2) ways in which their participation in POWER helped address these needs and challenges. The study gathered data from a focus group conducted with Chinese-speaking immigrant parents from the two high schools located in the neighborhood of Flushing, Queens and analyzed that data using content analysis methodology (Elo & Kyngas, 2007).

Method

Participants

The participants were 8 females and 4 males with the mean age of 41.9 (*SD* = 4.8, rage 35-50); 90% completed only high school or less. All of the participants were Chinese immigrants from China and spoke Mandarin and the Fuzhou dialect as their primary languages and lived at or below poverty line, based on their reported income (ranging from $8,000-$22,000 per household with an average of 2-3 people in the household). Nine out of twelve (75%) participants had lived in the U.S. for less than one year and all of them had been in the US for less than two years.

Procedure

After CACF's Review Board approved the study, flyers about the focus group were given to all the POWER parents, and those interested in participating contacted the program coordinator to sign up. A total of 12 Chinese immigrant parents out of 20 who attended the POWER group from 2011-2012 volunteered to participate in one two-hour focus group, designed to examine their experiences as POWER group attendees. The author facilitated several open-ended questions with a bi-lingual Mandarin Chinese/English facilitator, who translated the questions to the participants, and four other bilingual translators sitting next to every three parents to actively ensure that every parent's responses were accurately translated back to the author in real time. Prior to the beginning of the focus group, both verbal and written consent in Chinese was obtained by the program coordinator (co-author) from every participant.

The focus group interviews were audiotaped, transcribed, and translated into English by two bi-lingual volunteers, blind to the study. Following the content analysis strategies described in Elo & Kyngas (2007), the first author coded the transcripts and developed salient emerging themes by selecting key words and recurring words as the unit of analysis. Based on the limited knowledge of the experience of Asian immigrant parents in advocacy-based groups, the author chose to analyze the data using the inductive analysis method of content analysis. This process involves open coding, creating categories of themes, and abstraction (Creswell, 2003; Elo & Kyngas, 2007; Polit & Beck, 2004). The abstraction step refers to the fact that subthemes are selected to be grouped under a main theme on the basis that they "belong" to that particular group (Elo & Kyngas, 2007). The transcripts were then coded by the second author using the same process. Any discrepancies were discussed until a final set of themes was agreed upon by the two coders.

Measure

A semi-structured interview guide with 7 open-ended questions (see Appendix A for the questions) was used in the focus group to collect perspectives of all participants regarding their experience of attending the POWER group.

Results

The focus group was structured in a way to ensure that every participant was able to voice their opinion by going around the room for each question. The participants were given the choice to pass, but none of them took the offer, and 100% of the participants answered all the questions. As a result of the open coding, category building, and abstraction, there were a total of 6 main themes, representing salient perspectives of the focus group interviews.

Theme 1: Desire to be a good resident in the U.S. as a new immigrant

All parents agreed that it is very important for them to be informed and made more aware of American culture, including values, the legal system, and financial and housing situations. This knowledge reflects the importance of having their basic needs addressed, in addition to helping their children focus on attending a good college. Some of the participants' responses that illustrated this theme were:

"We just got in America without knowing about American's situation, and we wanted to learn all different things like the houses, loans and banks...to be successful" (F, 50).

"I want to understand the system here, so I can be a good American" (F, unknown age).

"I want to know about tax returns" (F, 39).

"Chinese and American have different cultures, we as parents, we won't know these if we don't attend the meeting, like, we understand after the person explained to me" (M, 37).

Theme 2: Desire to be an informed and good parent

All participants stated that one of the main reasons that they attended the POWER group concerned their desire to be a good parent for their children and want to be informed of the college preparation process in order to help their and to select the best college for them. Some of the participants' responses that illustrated this theme were:

"I also want to know about the school, and the tips on college (after entering college), and help my kids easier and

quicker to get into colleges" (F, 44).

"Me too - for kids, we don't know about the situations about American and American schools, I want to know more about it to help my kid go to a good college" (M, 37).

Theme 3: Gaining financial, linguistic and informational resources about the US educational system

Many parents stated that challenges as an immigrant parent for them mainly included the lack of knowledge about college preparation in the U.S. and the inaccessibility of financial resources due to their own and their children's limited English proficiency. Some of the participants' responses that illustrated this theme were:

"Just… know nothing. For example what score does a college need – we don't know about it. And we don't have money for top colleges, just want to know what are the ways to help him/her go to a good college and save money at the same time" (M, 43).

"We can ask many questions. If we have anything we don't understand we can ask them [the group leaders]. Like last time, I have question on loans and schools my children can go to" (F, 39).

"My child is still a ninth grader; I don't know what's going to happen to him next" (M, 37).

"I don't have a reliable job. Coming here helps me know more about options" (M, 36).

Theme 4: Addressing the lack of parent-child communication upon migration

10 out of 12 parents stated that the lack of parent-child communication was a challenge. Some of the parents expressed that their children are not likely to share with them the information or experience that they have at school. These parents agreed that it is difficult to be a good parent for them without their children sharing their experience with them. Attending the POWER group is an opportunity that these parents have to hear and learn from other parents and from the facilitators about common issues related to the American school system and the challenges that their children may face. Some of the participants' responses that illustrated this theme were:

"I know lot of things that I can't know in school (from the meeting), because my child does not necessarily tell me everything in school. He handles things by himself, I get information from here." (F, unknown age).

"Sure it is about communication with children. Parents and children think differently. That's common, because the age gap is a lot - we understand the society differently" (F, 39).

Theme 5: Solution for current challenges

All parents agreed that the POWER group is one of the reliable places to receive information. It is one of the significant solutions for their current challenges in relation to the lack of knowledge and information, the limited financial and linguistic resources for themselves and their children, and the lack of communication between them and their children. Some of the participants' responses that illustrated this theme were:

"We asked Teacher XX, what score ranges fit to which college, and he answers us almost every problem" (F, 35).

"I was told just what the process of applying for college is, and what academic score he needs" (M, unknown age).

"Yes, we can tell my friends about college applications, and we believe everything we heard from here is true. We can't tell if it is true if not from here" (F, 43).

Theme 6: A shift from receiving to giving: The opportunity to help others and exercise community engagement

When asked about the meaning of advocacy, all of the parents endorsed the opportunity to give back to the community and help other immigrants in their community by passing on the knowledge they learned from the POWER group. In addition, through helping other parents in the community, the parents acknowledged their voice as valuable and empowering for other immigrant parents facing similar issues. Some of the participants' responses that illustrated this theme were:

"We learned a lot, this place not only helped my kid, but also other parents and children" (M, 37).

"To me, advocacy means to speak out for your community about concerns that are important" (F, 39).

"Because I have lots of new immigrant friends who are struggling, their kids are not from these two high schools therefore they cannot attend the meeting. We should expand it to the larger society" (F, 45).

"I like the opportunity to help other parents in our community who do not attend this group. They need help with their kids too" (F, unknown age).

Discussion

This study sought to understand the experiences of new Chinese immigrant parents about their participation in an advocacy-based group during their initial settlement in NYC. The emerging themes revealed that the parents have a strong desire to be both a good parent and a good citizen, despite limited necessary knowledge and assis-

tance. These expectations, while they may not be unrealistic, require targeted support from the host community to materialize. The current challenges that they experienced as immigrant parents with children preparing for college mainly included the lack of information and knowledge about college preparations in the U.S. and their limited English proficiency as a barrier to fully understand the process. In addition to language and cultural barriers, many immigrant parents had a limited financial literacy of the U.S. system and did not know how to open savings and checking accounts, how to complete tax return information, or how to build financial histories in order to achieve financial independence and accumulate wealth (Amuedo-Dorantes & Pozo, 2002). A lack of options for viable employment is also a daunting issue to many new immigrants. These barriers make it distressful for new immigrants, who are expected to be financially independent soon after their settlement, based on the U.S.'s policy on immigration (The Department of Labour, 2008). All of the parents come from low-income backgrounds, and most of them never attended college in China. These needs are consistent with well-documented needs for new immigrants (Meleis, 2010). The POWER program provides information intended to strengthen knowledge in these areas. POWER provides workshops and educational presentations to increase knowledge of basic US financial literacy.

The barriers of class, language, and culture all contribute to parenting challenges for parents. Many immigrant parents do not know how or have the time to engage in their child's school-related activities. Many studies show a positive link between parental engagement and student academic success and achievement (Schaller & Rocha, 2007; Sobel, Kugler, 2007), including among Asian immigrant families (Crosnoe, 2010). However, this link is interrupted by the generational gap between the new immigrants and their children in this sample. Unaddressed intergenerational gap may lead to intergenerational conflicts, which are negatively associated with mental health outcomes among immigrants and their children (Ansary, Scorpio, & Catanzariti, 2012; Buki et al., 2003). The POWER program provides a safe space for parents to share their feelings and experiences and ask questions regarding the common needs that their children may have. This type of safe space provides validation, knowledge exchange, and emotional support (Seif, 2005). A safe space is also supported in the literature of adult learning as an essential element for transformative learning because ideal learning conditions promote a sense of safety, trust, and openness (Nino, Cuevas, & Loya, 2011).

Drawing from these challenges, the participants acknowledged that the variety of services for parents, including college preparation, legal and financial counseling, and English proficiency classes, are important for their success in building a new life in the U.S. As the lack of bilingual staff for these supports is one of the major barriers for the success of the immigrants and their children in school (Lake Snell Perry Mermin/Decision Research, 2005), attending the POWER group became very essential for the participants in this sample.

The shift from being the recipient of help to being the helper is another thematic response from this study's participants, which confirmed the importance of advocacy and leadership elements for new immigrants (Chang-Muy & Congress, 2009). All of the parents in this study acknowledged that attending this group empowered them to become an advocate for their community by passing on the information to other new parents who are not in the group. Throughout the year, the POWER parents were asked to create a college readiness campaign for the larger immigrant community. This is one of the activities that accentuates the community engagement and advocacy skills among the POWER parents. The desire and motivation to give back to the community is echoed by other immigration studies as well (Findley & Martos, 2015; Weng & Lee, 2015). For example, a recent study (Weng & Lee, 2015) on the civic engagement experience of giving back to the community among new immigrants found a desire to maintain ethnic identity and connection, seeing ethnic community as an extension of family, and a sense of duty and connection as major themes. The parents in this study expressed the desire to expand this group to make it available for other parents not living in their immediate community. This activated motivation for civic engagement proves the effectiveness of such an advocacy-based program for its ability to serve a wider range of immigrants through empowerment and leadership of the program participants. This internal motivation to help and connect with their ethnic community appeared to be activated by their participation in the group and drove them to engage in civic engagement plans as one protective factor for their settlement in the U.S.

POWER is not the only parent group serving new immigrants in NYC. There are other available parent programs for immigrants in NYC (NYC Mayor's Office of Immigrant Affairs, 2015); however, most programs provide specific services, such as English as a second language classes, job training workshops, and early childhood development. Because new immigrants with high school-aged children often face several unique challenges, POWER aims to be a well-rounded and advocacy-based program for financial literacy and college readiness and to play an essential role in increasing parent engagement and empowerment during the initial settlement stage. Advocacy-based organizations can not only provide linguistically and culturally appropriate services to connect with immigrant parents and their children, but also empower these parents to become leaders and advocates for members of their community who are faced with similar settlement challenges.

Limitations and Future Research

There are several limitations to be noted of this study. First, it consisted of only one group of 12 participants. More focus groups of the participants from different cohorts in the program are recommended to increase the representativeness of the findings. Second, the findings might not generalize to other new immigrants in other settings. These experiences may be unique to the participants included in the study. A replication of a similar study is recommended in new immigrant parents from the Fuzhou province who attend similar

programs. Third, a self-select bias may be at play as these participants volunteered to be in the study. Their experience may be qualitatively and characteristically different from parents who attended the group but were not in the study. Lastly, while the first author is an outside researcher contracted to conduct focus group interviews, the second author is part of the CACF's POWER program. Several strategies were used to minimize the effects of the authors' personal biases (e.g., the author's use of extensive journaling and memos throughout the study to reflect on and minimize the influence of these possible biases, and the use of bi-lingual volunteers who were blind to the study, and the study's participants to be involved in the translation and coding of the data). However, it is important to acknowledge that despite these strategies the second author's connection to the POWER group may have influenced the participants' responses and the focus group process.

Future research that explores the following issues would be beneficial: (1) long-term outcomes of advocacy-based services for new immigrants and their children, (2) the effects of participation in advocacy-based services on mental health outcomes among immigrants and academic outcomes among their children, (3) factors that are necessary for addressing intergenerational gaps and strengthening parent-child relationship among new immigrants to prevent intergenerational distress. Lastly, there should be further systematic exploration of the development, maintenance, and use of internal motivation in civic engagement as part of settlement for new immigrants.

Abstract

We investigated cultural variations in parent-child representations of Dutch (n = 112), Italian (n = 82), and Bulgarian (n = 121) children's family drawings. The drawings were selected to represent highly individualistic (Dutch), individualistic (Italian), and collectivistic (Bulgarian) cultures. Using the Pictorial Assessment of Interpersonal Relationships (PAIR, Bombi, Pinto, & Cannoni, 2007), all drawings were coded with regard to Cohesion, Distancing, Similarity, and Value in parent-child representations. Dutch children scored higher on Distancing and lower on Cohesion, compared to the Italian and Bulgarian children, whereas Bulgarian children scored higher on Cohesion and lower on Distancing compared to the other two samples. We conclude that children's drawings represent individualistic and collectivistic traits in the relationship between self and parental figures.

Keywords: Children's drawings, parent-child representation, Bulgaria, Italy, the Netherlands

This study investigates the representation of parent-child relationships in children's drawings across three European cultures by exploring potential cultural variations underlying these representations. Research has consistently found that children's drawings provide a window into the child's view of family dynamics and self-perception within the family. Children draw their environment and relationships in socially and culturally relevant ways (Dennis, 1966). Research has also shown that culture and embedded local values within social and cultural systems affect the representations of children's drawings (LaVoy et al., 2001; Nuttall et al., 1988; Rübeling et al., 2010). For instance, LaVoy and colleagues (2001) compared Japanese and North-American children's drawings showing that Japanese children drew significantly fewer smiles than North-American children. Presumably, Japanese children have developed boundaries between the private self and public self, whereas the American children have been taught the value of social emotion. The Japanese culture emphasizes group identification and a strong feeling of belonging. Such society's high social values are reflected in the Japanese drawings, showing larger figures as the self in comparison to the American children (LaVoy et al., 2001). The comparison between Chinese and U.S. children's drawings made this distinction even clearer. American children expressed a greater sense of individualism, seen by depicting themselves alone, whereas the Chinese children expressed a greater sense of collectivism, drawing significantly more figures as part of their family than the US children (Nuttall et al., 1988). These studies show that children's drawings can be used as a valid tool to explore culturally relevant representations across cultures.

Cultural differences have also been ascribed to the distinction made between cultures of individualism (independence) and collectivism (interdependence). Individualism can be defined as a complex set of behaviors based on the concern for oneself detached from the immediate family or social environment (e.g., Western cultures; Shiraev & Levy, 2010)The self-construal related to individualism is characterized by an emphasis on personal accomplishments, success and the development of a unique personality (Shiraev & Levy, 2010). Collectivism, on the other hand, is characterized by "strong ties" where individuals subordinate their personal goals to the goals of some collective, which is usually a stable in-group, like their family (e.g., Asian cultures; Hofstede, Hofstede, & Minkov, 2010). In this line of reasoning, parent-child relationships may be related to independent or interdependent self-construal. Parents from individualistic cultures focus on parenting the child as an independent self, whereas parents from collectivistic cultures emphasize interdependent upbringing (Rübeling et al., 2010). As the relationship between parent and child differs between cultures, it would be reasonable to expect that these differences are expressed in children's drawings. A more detailed description of parent-child relationships of the target groups and study context is presented below.

The Present Study

This study explored cultural variations in representations of parent-child relationships in drawings of children in three European countries (i.e., Bulgaria, Italy, and the Netherlands) as representatives of individualistic and collectivistic cultures. Bulgaria, an Eastern European country, represents a collectivistic culture in comparison to the other two Western European countries. Bulgaria has been rated with 49 out of 100 points on individualism and showing a higher degree of un-

equal power in comparison to the Netherlands and Italy. Bulgaria is described as having strong family ties (Davidkov, 2004). Characterized by long term commitment and loyalty towards the family (nuclear and/or the extended family) and belongingness to the family is high (Hofstede, 2010). Bulgarian parents teach their children to obey and children are thought to treat their parents with respect. There are tight rules for children, they are encouraged to think in term of "we" and respect and harmony between the family members are important (Davidkov, 2004). Studies have shown that collectivism has a strong presence in Bulgaria, presumably because of the communistic and totalitarian systems of the past (Kulkarni et al., 2010).

The Netherlands is one of the most individualistic countries in Europe and scores 80 out of 100 points on individualism with strong equal power distribution (Davidkov, 2004). In comparison to Bulgaria, Dutch parents teach their children in terms of "I". Children treat their parents as equals and vice versa. Dutch family ties can be described as weak. Parents have lenient rules towards their children and they stimulate their children to speak their minds. Young adults are encouraged to leave the house. Parents see this as part of their education; acquiring the experiences they need to handle life as autonomous individuals (Reher, 1998).

Italy has been scored 76 out of 100 points on individualism due to the fact that large cities became more individualistic in recent years (Davidkov, 2004; Hofstede et al., 2010). However, Italy is more collectivistically oriented compared to the Netherlands and less than Bulgaria (Smith, Dugan, Peterson, & Leung, 1998). Similar to Bulgarian family ties, the Italian family ties are described as strong. Children from Italian families live longer within the household compared to their Dutch counterparts. Parents support and protect their children until the child is ready to leave the household, normally for marriage or when financially independent (Reher, 1998).

This study investigates cultural variations in parent-child representations in Bulgarian, Dutch and Italian family drawings. Dutch children's drawings have been chosen as representative of an individualistic culture, Italian drawings represent an individualistic culture but less individualistic than the Dutch, and Bulgarian drawings represent a collectivistic culture. The following hypotheses were tested:

Hypothesis 1: Bulgarian drawings will show higher cohesion compared to Italian and Dutch drawings, denoting higher interdependence in the parent-child relationship.

Hypothesis 2: Dutch drawings will show higher distancing compared to Bulgarian and Italian drawings, expressing higher independence in the parent-child relationships.

Hypothesis 3: Bulgarian drawings will show higher similarity and collectivistic features compared to Italian and Dutch drawings.

Hypothesis 4: Bulgarian children's will show higher value compared to Italian and Dutch, conveying higher degree of power distance among family members.

Method

Participants and Procedure

Participants were 338 children (184 female, 154 male) aged 7 to 14 years of whom 123 were Dutch, 94 were Italian, and 121 were Bulgarian (Table 1). Drawings were collected as part of a larger multi country projects in Bulgaria, Italy and the Netherlands. Based on Bombi, Pinto, and Cannoni' method (2007), all children were given an A4 sheet of white paper and were asked to draw their family. The children were free to use the sheet as they wanted, horizontally or vertically, and to use crayons, pencils or pens provided to them. The children were free to draw what they thought was their family, including pets, surroundings, activities, or attributes. A time limit of thirty to forty-five minutes was set. Afterwards, children were asked to identify the figures (e.g., self, mother, father, peers, etc.).

The Pictorial Assessment of Interpersonal Relationships (PAIR; Bombi et al., 2007) was used to code children's representation of family relationships. PAIR explores the differences between one pair of individuals in this case the mother-child and father-child dyad. The four PAIR scales that were used in this study were: Cohesion, Distancing, Similarity and Value. *The Cohesion Scale* measures the degree of interdependence among partners with 6 subscale. Three out of the six subscales refer to the direction of partner's action. *C1 Looking at*: Is one figure looking at the other? *C2 Moving towards*: Does the posture of one figure tend to reduce space between two figures? *C3 Coordinated activity*: Is the activity of one figure coordinated with the activity and/or presence of the other figure? Three of the six subscales of Cohesion refer to the organizational space. *C4 Proximity*: Are the two figures near one another? *C5 Common area*: Are the two figures both located in a shared area, distinct from the remaining space in the sheet? *C6 Union*: Are the two figures united by a graphic element? Each subscale provides a dichotomous score with higher scores indicating high interdependence and lower scores - more independent, individualistic view of the relationship (Bombi et al., 2007). *The Distancing Scale* measures the degree of autonomy among partners, comprising 6 subscales. Three of the six subscales refer to the direction of the partner's action and not to its content. *D1 Looking away*: Does one figure actively avoid looking at the other? *D2 Moving away*: Does the posture of one figure tend to increase the space between two figures? *D3 Independent activity*: Does one figure act by itself? Three of the six subscales refer to the organizational space. *D4 Remoteness*: Are the two figures far apart? *D5 Individual area*: Is one figure set in an area of its own distinct from the remaining space in the sheet? *D6 Separation*: Are the two figures separated by a graphic element? The subscale provides dichotomous score with high scores indicating higher degree of autonomy or independence, and low scores - an interdependent view of the relationship. Simultaneous presence of indices in cohesion and distancing is possible (Bombi et al., 2007). The *Similarity Scale* measures the psychological affinity among figures and consists of 5 subscales each scored from 0 (little or no simi-

larity) to 2 (strong similarity). Two of the five overall subscales refer to stable aspects of the figures. *S1 Height*: Are the two figures of the same height? *S2 Position*: Are the two figures in the same position? Three of the five subscales refer to changeable aspects of the figures. *S3 Body*: Do the two figures have the same face and body form? *S4 Attributes*: Do the figures show attributes of the same type and form? *S5 Colors*: Are the colors of the two figures' body and attributes the same? A high score on similarity indicates a more identical pair of figures, which is a collectivistic trait; a more diverse pair of figures reflects individualistic features (Bombi et al., 2007). The *Value Scale* measures the comparative value among figures. It comprises 5 subscales, each given a score from 0 (identical or very similar value) to 2 (value disparity). Three of the five subscales refer to the figures' importance. *V1 Space occupied*: Do the two figures occupy an equal amount of space? *V2 Dominant position*: Is the relative location of the figures on the page equal? *V3 Body detail*: Do the two figures have an equal number of body parts? The remaining two subscales refer to the figures' elaboration. *V4 Number of attributes*: Do the two figures have the same number of attributes? *V5 Number of colors*: Do the two figures have the same number of colors? High scores indicate a difference in power that the pair of figures display (Bombi et al., 2007).

Table 1

Sample Description by Gender, Age and Country

	Bulgaria	Italy	The Netherlands	Total	Group differences
	(n = 121)	(n = 94)	(n = 123)		
Gender, n (%)					
Female	64 (52.9%)	50 (53.2%)	70 (56.9%)	184 (54.4%)	χ^2 (1, 338) = .72
Male	57 (47.1%)	44 (46.8%)	53 (43.1%)	154 (45.6%)	
Age					
Mean (SD)	12.45 (1.44)	9.24 (1.55)	9.79 (1.80)		F(2,338) = 123.81*
PAIR, Mean (SD)					
Cohesion	.90 (.90)	.80 (.76)	.58 (.71)		F(2,353) = 5.83* η^2 = .03
Distancing	1.75 (.86)	1.82 (.79)	2.20 (.90)		F(2,353) = 10.37* η^2 = .06
Similarity	7.02 (1.86)	7.74 (1.47)	6.17 (1.54)		F(2,353) = 11.47* η^2 = .06
Value	1.51 (1.42)	2.24 (1.56)	1.82 (1.44)		F(2,353) = 6.63* η^2 = .03

Note: PAIR = Pictorial Assessment of Interpersonal Relationships. * $p < .001$.

Results

Analyses were conducted in three steps. First, all drawings were coded by two independent raters whose inter-rater reliability ranged between .86 and 1.00. Second, bivariate Pearson correlations between mother-child and father-child dyads on every PAIR scale were conducted. There were positive and significant correlations between mother and father dyads on cohesion ($r(338) = .56$, $p < .001$), distancing ($r(338) = .24$, $p < .001$), similarity ($r(338) = .74$, $p < .001$) and value, $r(338) = .73$, $p < .001$. Therefore, composite variables were created for all the scales consisting of a total score of each scale regarding mother-child and father-child comparisons. Third, Multivariate Analysis of Covariance (MANCOVA) was performed with Cohesion, Distancing, Similarity and Value as dependent variables and Italian, Dutch and Bulgarian culture as the independent variables and with age as the covariate. There were significant effects for cohesion ($F(2, 338) = 5.834$, $p < .003$, $\eta^2 = .03$), distancing ($F(2, 338) = 10.37$, $p < .001$, $\eta^2 = .06$), similarity, ($F(2, 338) = 11.47$, $p < .001$, $\eta^2 = .06$), and value ($F(2, 338) = 6.63$ $p < .001$. $\eta^2 = .03$) (see Table 1). Post-hoc Bonferonni comparisons showed that in line with the first hypothesis, cohesion was higher in drawings of Bulgarian children, denoting a higher degree on interdependence among family members. Similarly, as expected, the independence among family members was higher in the Dutch drawings compared to the Italian and Bulgarian ones, which confirms the second hypothesis (Figure 1). Contrary to the third hypothesis, similarity was highest in Italian rather than in Bulgarian drawings. The last hypothesis was also not confirmed as Italian rather than Bulgarian drawings had higher scores on value between parents and children.

Figure 1

Examples of Family Drawings of Bulgarian, Dutch and Italian Children

Figure 1a

Drawing of Bulgarian girl (second figure from left), age 10, representing high Cohesion, low Distancing, low Similarity and high Value

Figure 1b

Drawing of Dutch girl (third figure from the left), age 11, representing low Cohesion, high Distancing and low Value

Figure 1c

Drawing of Italian boy (middle figure), age 9, representing high Cohesion, low Distancing, high Similarity and high Value

Discussion

The purpose of this study was to explore cultural variations in representations of parent-child relationships in drawings of children with different cultural backgrounds. We found that Dutch children's drawings represented high individualistic features and Bulgarian children demonstrated high collectivistic features, whereas the Italian sample represented moderate individualistic combined with collectivistic traits. In fact, in line with the first hypothesis, Bulgarian children's drawings showed a significantly higher score on cohesion (e.g., proximity and union between child and parents) compared to the Dutch, indicating a higher degree of interdependence. In line with the second hypothesis, we found that Dutch children's drawings were scored significantly higher on distancing in comparison to the Bulgarian and Italian drawings. The Netherlands is a highly individualistic country, where the self is perceived as autonomous and separate. Dutch children drew more distance between the child and parent, depicting independent activities, reflecting autonomy and independence of the child. Drawings provided by Bulgarian children showed the opposite, confirming a more interpersonal bond and cohesion between parents and child (Rübeling et al., 2010).

With regards to the third and fourth hypotheses, no significant differences were found between Bulgarian and Dutch children's drawings on similarity and value in parent-child representations. Possible explanations for these discrepancies could be found in the characteristics of autonomy and relatedness. It has also been suggested that individualistic and collectivistic traits may coexist at the same time in different situations (Sahin & Mebert, 2013). Yet, with regard to similarity in parent-child representations, a significant cultural group difference emerged. The Italian drawings showed a higher degree of similarity among figures compared to Bulgarian and Dutch. Italy has been considered as an individualistic country with collectivistic traditions, especially in terms of family relationships. Traditionally, the immediate family is a tight unit of relevant representation in sharing values and traditions (Rabaglietti et al., 2012), possibly explaining such strong similarity in parent-child dyads drawn by Italian children.

Significant cultural differences were also found between Italian and Bulgarian drawings on the value scale (denoting power distance relationships). Unequal power is a characteristic for collectivistic cultures, therefore, it would have been expected to be high in Bulgaria, but instead, was found to be high in Italy. As explained by Hofstede (2001), Italians believe in hierarchy and accept different power distributions. Another alternative explanation could be found in some details when scoring similarity and value scales, namely, the diversity of color. The Italian children drew mostly in black and white compared to the Bulgarian and Dutch who used different colors. The lack of color could result in a higher overall score on similarity and value scales, which would not necessarily explain cultural differences but use of diverse materials.

In summary, the results showed cultural variations in parent-child representations among Dutch, Italian and Bulgarian children. Overall, the Dutch scored low on cohesion and high on distancing (low on similarity and value), according to expectations and evidence that the Netherlands is an individualistic culture. The scales of cohesion and distancing indicate that Bulgarian families tend to be more collectivistic and interdependent compared to the Italian and Dutch. On the other hand, the Italian sample showed more collectivistic traits than previously expected, indicating a seemingly collectivistic culture on some aspects, but also having individualistic traits as seen in the cohesion and distancing scores.

The study has some limitations. First, future research could expand on different developmental stages. The PAIR uses different coding schemes for complex and elementary drawings drawings to control for age differences. However, age could still have an effect on how individuals perceive their culture. For example, older children could have

a different understanding of the parent-child relationship in terms of power. Adolescents go through a period of change needing more freedom and autonomy (Noller & Callan, 1986). Thus, expressing more freedom and autonomy means a change in power, and not necessarily an individualistic trait. Further studies should use the PAIR in different age groups of children and adolescents. Second, although PAIR has shown to be a good tool to detect how children understand interpersonal relationships and how they discriminate between different categories of relationships, it would be useful to add other methodological tools. As Bombi and colleagues (2007) pointed out, drawing and language are both able to understand central aspects of parent-child relationships, but also differ in their sensitivity to specific aspects of the relational experience. For example, verbal report of a relationship may focus more on doing things together, or being near each other. Drawings, on the other hand, depict other relational indices, such as looking at each other and sharing a common area. It would be interesting to explore if children's verbal narratives would resemble individual aspects of family life (e.g., "I") or collective joint activities (e.g., "we"). It is also important to note that even though statistical significance was reached in testing our hypotheses, the substantive significance of these effect sizes was small to medium. Arguably, other factors may contribute to explain the variance in drawings, such as age or developmental period, drawing ability, or dynamics related to interpersonal relationships within the family. Despite these limitations, we can conclude that this study showed unique aspects as well as interesting similarities and differences among children's family drawings. The method used to examine these aspects, the PAIR, showed to be a good instrument to explore cultural variations in parent-child relationships in Bulgarian, Italian and Dutch children's drawings.

Experiencing the Dynamics of Cultural Identity

Arzu Aydinli-Karakulak, PhD

Bahcesehir University, Turkey

arzu.karakulak@eas.bau.edu.tr

Contemporary developments such as globalization and technological advancements require the discipline of Cross-Cultural Psychology to adjust its operationalization of culture. Whereas it was viable to define cultural groups alongside national borders (i.e., "being Turkish, due to being *from* Turkey), and to study culture and acculturation as categorical and static entities in the last few decades (e.g., by using the acculturation model of Berry, 1997), such an operationalization does not seem valid anymore (van de Vijver, Blommaert, Gkoumasi, & Stogianni, 2015). Cross-border migration and web-based communication have led to more faded and permeable cultural boundaries. Today, an increased number of individuals negotiate various cultural identities and identify as "multicultural" (e.g., Chen, Benet-Martínez, & Bond, 2008; Hong, Morris, Chiu, & Benet-Martinez, 2000); thereby challenging traditional conceptualizations of culture. My personal experiences from childhood to present day illustrate the drawbacks of static and categorical approaches, and highlight the need for truly dynamic conceptualizations of culture and multiculturalism (Aydinli & Bender, 2015).

Culture has always played an important role in my life. Being born to Turkish parents in South-Western Germany made it impossible for me to escape the process of acculturation. I had to explain to others how to pronounce my first name correctly as early as kindergarten and this quickly made me realize that "I am somehow different from others". Experiences such as those shaped my cultural identity. They taught me that I am Turkish-German, or rather only Turkish, as it was the "Turkishness" that set me apart from other children in kindergarten, from classmates at school, and from fellow students at university. This distinctiveness unwittingly led others to categorize me as *"the Turkish"*, which in turn affected how I viewed, identified, and labeled myself. Driven by these experiences, I developed a genuine interest in studying culture. As a result, I attended a joint PhD in Social/Cross-Cultural Psychology between Tilburg University (the Netherlands) and Koç University (Turkey).

Before I moved to the Netherlands, I had primarily considered myself *"Turkish",* while knowing that, at times, I can also be German, or at least think and behave like a German, even without considering myself German. After arriving at the department of Cross-Cultural Psychology at Tilburg University, the way I viewed and perceived myself changed. There was no distinctiveness anymore. I was faced with a multicultural environment consisting of Dutch, German, Turkish, Bulgarian-Italian, Chinese, South African, Kenyan, Indonesian, and Spanish colleagues and friends. I once again experienced acculturation, but this time from a different perspective. For the first time I felt to be Turkish, German, everything and nothing *at once*. I literally felt like myself, "Arzu", rather than the Turkish girl in kindergarten, school or university. Going beyond these artificially drawn boundaries of cultural groups (i.e., breaking through cultural group borders that were created by the environment and assumed impermeable) has been an invaluable gift for me; it has been a genuine experience of how context and cultural identity work together.

After I spent two years in Tilburg, in February 2013, I moved to Turkey to complete my PhD studies at Koç University. Again, my distinctiveness reappeared, and my German accent when speaking Turkish revealed that I am different. People around me, both within and outside the university, considered me as assertive, direct and cold, as disrespectful of hierarchies, as sticking too much to rules and principles, as being over-concerned with work and so on. Simply, for them I was *German,* which also affected how I have been viewing and defining myself: Each time when I met German students in the hallways of Koç University, I experienced feelings of sympathy. We apparently had something in common; being distinctive (as Germans) in a primarily Turkish context.

Today, as an Assistant Professor of Psychology at Bahçeşehir University in Turkey, I am again acculturating; especially to my role as a lecturer which offers numerous opportunities of experiencing culture. For instance, I recently learned that for my students "asking the instructor for feedback" means criticizing, questioning or rejecting the instructor's evaluation; hence, a clearly inappropriate act. This clarification provided me with insight why very few students request feedback on their papers or assignments.

I truly consider myself lucky for these experiences as a child, student, PhD candidate, and assistant professor. They substantially shaped my personal understanding of culture and cultural identity, as well as my research agenda. To me, culture is not static anymore; it is in constant interaction

with various contexts, roles, and cultures that we find ourselves in (Oyserman, 2011). Now, I realize that I am actually more than just "the Turkish" or "the German", and that it is my environment and the (non-) distinctiveness in it that determines how I view, identify, and label myself, resonating with the call for a more dynamic approach to study culture (see "polycultural psychology" by Morris, Chiu, & Liu, 2015). Contemporary cross-cultural research should do justice to the requirements of a globalized world and move beyond a static understanding and assessment of culture that merely offer a snapshot of cultural identities and orientations. Instead, research should acknowledge that culture is a dynamic construct, which strongly interacts with the different contexts in which we find ourselves throughout our lives. Examining the interplay between culture and context will enhance our notion of culture and multicultural identity, advance the practices that we apply for their assessment, and eventually lead to more valid predictions.

The Ph.D. Experience in Sweden: Having it "Just Right" and Applying "the Fika Model"

Fanny Gyberg *Ph.D. Student in Psychology*
Department of Psychology, University of Gothenburg, Sweden
fanny.gyberg@psy.gu.se

First of all, I am very honored to be invited to share my experiences with students and colleagues from APA Division 52 International Psychology about being a Ph.D. student in Sweden. Since the Ph.D. program may look different depending on the university or department at which you are enrolled, I will share my experiences of being a doctoral student at the Department of Psychology in Sweden's second largest city, Gothenburg. The best way to describe what it is like to be a doctoral student in Sweden is to provide a brief introduction to Sweden's cultural context. So what makes Sweden so special besides being the home of ABBA, IKEA, Pippi Longstocking, and the Nobel Prize?

Often, Swedes themselves call their country "the land of the *just right,*" which means that Swedes live by the motto of not having anything too much or too little – we simply want everything to be *just right*. Thus, Sweden may be viewed as Northern Europe's own Goldilocks. However, when we look at Sweden's cultural context, Sweden is anything but *just right*; *extreme* might be a more suiting label. According to the World Value Survey (WVS6, 2015), which measures different aspects of culture, Sweden differs significantly from all other countries in the world, even our closest neighbors Denmark, Norway, and Finland. Sweden stands out as having the most beliefs in emancipative values and as the second most secular-rational country in the world. In other words, Sweden is a country that does not emphasize the importance of religion, traditional family values, or deference to authority; instead it is a country that values equality, whether it is about gender, ethnic background, or sexuality. In addition, Sweden has a well-established well-fare system with paid sick leave, paid parental leave, and subsidized health care. All Ph.D. students are employees with paid salary from day one and are allowed benefits such as free health care, paid prescription drugs, as well as being guaranteed at least 28 paid vacation days a year. Therefore, being a doctoral student in Sweden is a privilege.

To be admitted to the doctoral program at my department, candidates are required to have a Master's degree in Psychology and to submit a dissertation plan along with their applications. Then, a selection committee reads and evaluates the quality of the applications and the candidates who are valued as suitable for the doctoral program are invited to interviews. Usually, the Ph.D. program takes four years in Sweden. At my department, all new doctoral students take compulsory courses in statistical methods the first semester. Then, it is up to the student, together with his or her supervisor, to choose which courses to take. Quite a few of these courses are reading courses created by the students themselves in order to get an in-depth knowledge in areas related to their dissertation. Within the four years of the Ph.D. program, the students are supposed to conduct and report a minimal of three studies, at least one of which is required to be accepted by and published in a peer-reviewed journal.

I got accepted to the Ph.D. program in August 2014 and I am currently in my second year. Doing reaserch on identity has been my dream since I figured out that identity has been the common topic of over ten years of prior studies in psychology, sociology, history of ideas, social anthropology, and musicology. And the dream came through. I am a member of the Gothenburg Research unit on Youth development (GReY) where I am fortunate to have Professor Ann Frisén (University of Gothenburg) and Associate Professor Moin Syed (University of Minnesota) as my supervisors. Currently, I am working simultaneously in two very interesting projects named GREEN and GoLD. GREEN (Gothenburg Research on Ethnicity-related Experiences and identity Narratives) is a project investigating young people's identity and experiences related to ethnicity. GoLD (the Gothenburg Longitudinal study of Development) is a longitudinal study that has been continuing for more than 30 years with the overall goal to investigate cross-generational patterns of identity and personality development in early adulthood. In addition to these research projects, I am currently taking a course on scientific communication, in which we learn ways to better communicate our research to the broader society.

Being a Ph.D. student, diving into the things that interest you the most, trying to find answers to the questions you have, travelling all around the world to hear about the latest research findings, and meeting international students and scholars; these are the aspects of research that drive and motivate me the most. However, being a doctoral student is not all milk and honey. It is a constant questioning of yourself, your abilities, and the work that you do. It is an emotional rollercoaster, with ups and downs, where you just have to buckle up and try to enjoy as much of the ride as possible. I think these struggles are universal and that many Ph.D. students around the world would agree.

At times, it may be easier to feel isolated and alone as a Ph.D. student at my department since there are very few mandatory courses we take together with other students. Therefore, it is especially important to have a surrounding social support system of colleagues and friends that keeps you going. Fortunately, we have a very strong cultural practice that may serve as a protective factor against these potential feelings of loneliness. It is called a *fika.* A fika has been described as a Swedish practice where all employees, professors and students take a pause together over a cup of coffee and a pastry (or two), and engage in conversations (McLean & Syed, 2015). Taking a fika with people from other areas of research and at different stages of their scientific careers often provide new angles and ideas for your research, and is something I would encourage every Ph.D. student to engage in.

If you are interested in becoming a doctoral student in Sweden, the first step is to connect with a Professor, learning about what they are working with, and investigate if they are searching for a Ph.D. student. Since all departments tend to have slightly different procedures, it is good to learn about the specific application and acceptance procedure at that particular department. Most importantly, do not forget to follow the instructions. For Swedes, not following the rules is a deal breaker and a common reason to why many applications are denied according to our Head of Department. I would recommend inviting for a fika where you and the Professor can discuss mutual research interests.

Going forward, I still have both my Licentiate defense (a half term exam) and my final dissertation defense ahead of me. What happens after the years as a Ph.D. student is hard to anticipate. As a doctoral student, without a clinical background, it is sometimes hard to see how to continue and move forward in your career. Probably, I will apply for a Post-Doc, either in Sweden or abroad. Hopefully by then, I will have built a rich network with fellow researchers with potential for future collaborations and research projects. My goal is to be able to continue having it just right and spreading the word about the fika model wherever I go.

PhD in Psychology: An Experience from Portugal

Diana Farcas
Instituto Universitário de Lisboa (ISCTE-IUL), Portugal
diana.farcas@iscte.pt

I am grateful for the opportunity to share my PhD experience in Portugal and I would like to start by affirming that I am a doctor since I finished my bachelor's degree in Psychology. This might sound strange, but in Portugal, it is something normal to occur. When addressing someone unknown, for example in an e-mail, a person's name does not seem to be enough, so "Dr." is usually placed before it. Titles are used on a daily basis and, according to Hofstede (1994) this might be due to Portugal's high score on power distance. This result indicates that hierarchy is extremely present and accepted in the Portuguese culture, leading to an unequal distribution of power. Therefore, individuals holding a bachelor's degree are admitted to have privileges for their position, at least in the way they are addressed. Consequently, my perception is that in Portugal, there are as many doctors as there are women named Maria (*i.e.* the most popular female name). However, I am aware that, although many people are called doctors due to the Portuguese culture, the number of individuals pursuing a PhD degree has been constantly increasing. Data shows that in the last ten years, the number of completed PhD degrees doubled, and the last available data point out that in 2013, there were 2668 Portuguese holding a PhD degree (PORDATA, 2015). Having this in mind, and not forgetting the aim of this short article – to share my PhD experience in Portugal – next I am going to answer the following two questions: What is needed to be a PhD student in Portugal, and what is it like to be a PhD student in Portugal?

What is Needed to Be a PhD Student in Portugal?

In order to apply for a PhD program in Psychology at ISCTE-IUL, it is necessary to hold a master's degree in Psychology and to design a PhD project planned to be conducted over a period of three years. A supervisor should approve the PhD project and afterwards a panel evaluates it, along with the candidate's resume. Based on this evaluation, the candidate may be admitted for the PhD program and then the adventure begins.

During the first year, a PhD student is required to attend different courses and complete the correspondent assignments, covering thematic (*e.g.* health psychology) and methodological seminars (*e.g.* SEM, meta-analysis) as well as receive training in academic skills (*e.g.* academic and scientific writing). Besides this, students enrolled in the first year of the PhD program are required to organize a conference aimed at bringing together national and international PhD students, in a context of scientific exchange and discussion. Students have the opportunity to present and discuss their research project with a senior researcher. This public presentation of the PhD project is the one to which the students commit themselves to complete over the upcoming three years, after successfully completing the first curricular year of the PhD program. Besides conducting the PhD project, at the end of each one of the three years, students are required to complete a report describing the progress made with the research project and what they plan to do next. The supervisor and a senior scholar evaluate the report independently and provide some feedback. Then, PhD students are ready to advance to the next year.

What is it Like to Be a PhD Student in Portugal?

I consider that dedicating three years to the PhD project may be a solitary process. That's why I believe it is important to adopt some useful habits which can lead to a successful end of this journey. Some of the habits which I embraced and which help me see the light at the end of the tunnel are related with my professional and private life.

Regarding the professional life habits, I considered that after completing the curricular year of the PhD program, it could be useful to continue attending some of the thematic and methodological seminars offered at ISCTE-IUL. They provide me with the opportunity of learning about others' research and different ways of analyzing data. At the same time, I found out that the pre-conference workshops are very interesting ways of improving my knowledge about a specific topic and of sharing ideas with other PhD students/early career scholars. Having this in mind, every time I hear about an interesting conference where I could disseminate my research, I check the conference website in search of the offered pre-conference workshops, lunch with senior scholars or other activities which may contribute to the development of my PhD career and make it less solitary.

In this sense, I consider that networking is a powerful tool which can be developed through the professional life habit of attending conferences and becoming a member of one or more associations. On one hand, conferences bring together scholars who work in a similar area as mine and provide the opportunity for presenting and discussing the encountered results with other PhD students and senior scholars. On the other hand, associations help me know about the upcoming conferences and other important events in the specific research area they are promoting. Therefore, in my opinion, it is very important to wisely choose the association you would like to become a member of, so that you receive useful information related to your own research area. For example, my research is about the contemporary Portuguese migrants' cross-cultural adaptation in the United Kingdom. By taking into account its cross-cultural aspect, I decided to become a member of the International Association for Cross-Cultural Psychology (IACCP). Then, after conducting a qualitative study and consulting the most recent statistics about the contemporary Portuguese migration, I realized that it is mostly composed by young (under 30 years old) and highly qualified individuals; hence I considered that it would be interesting to become a member of the Society for the Study of Emerging Adulthood (SSEA) as well as the European Association of Developmental Psychology (EADP). Besides being a member of the EADP, I had the opportunity of being a member of its Early Researchers' Union, where I represented Portugal and participated in the 3rd Writing Week Event. This was an extremely enriching experience, since I had the opportunity to share research experiences with other PhD students, participate in several lectures given by very successful scholars and contribute to the writing of a systematic review article on immigration paradox and morbidity hypotheses. Another valuable output of my association membership is the participation at the 3rd IACCP Summer School, where I was fortunate to work with other PhD students on the elaboration of a research project, which brings together our research interests.

Participating in research projects related to my research interests is another professional life habit that I adopted. My supervisor, Dr. Marta Gonçalves has been challenging me to broaden research horizons and make the most of these three years of doctoral studies, by acquiring new skills and constantly training the existing ones. Therefore, she invited me to participate as a research assistant in several research projects related to family, mental health and intergeneration relations, and encouraged me to apply for a post-graduate grant for lecturing activities. As a result of this, besides carrying out the studies proposed in my PhD project, I was fortunate to participate in the whole research process of other research projects and to provide lectures to several classes of graduate and undergraduate students.

So far, the described professional life habits seem to follow an internationalization path. This is not by accident that it happened, and I believe that it is the direction that we are mostly encouraged to follow. When looking back to the opening ceremony of the PhD program, I clearly remember one of the expressions used by the director: "Spread your wings and fly!" Therefore, going abroad, getting to know other researchers who work on a similar topic and possibly establishing cross-cultural collaborations is extremely valued in Portugal. In my opinion, this actually makes sense since most of the grant opportunities appreciate international collaborations.

Nonetheless, I should not forget to mention that, at the national level, there are some professional life habits that I adopted, which to some extent complement the previously mentioned ones. For example, when looking for associations to become a member, I decided to explore the existent ones in Portugal. Through this search, I found out that there is an Emigration Observatory which aims to collect relevant information for the characterization of the Portuguese emigration and make a contribution to the definition of public policies in this area. Regarding policies, there is also a government organization named High Commissioner for Migration, which I decided to follow closely, since I believe that research results should be disseminated to policy makers, in an attempt to promote change in the field.

Besides this, another professional habit I adopted at the national level goes back to the first year of the PhD program, when I joined one of the research groups present at the Center for Social Research and Intervention (CIS-IUL). It is called Health for All (H4A) and aims to bring together junior and senior scholars whose research interests focus on one of the following four areas: 1) risk perception and health communication; 2) health of social minorities; 3) equality promotion and participation in the health-care processes; 4) health and places. During regular meetings, we present and discuss research projects and manuscripts (ready to be submitted) elaborated by H4A's members or invited scholars.

The PhD project and all the other professional habits I adopted, compose my job at the moment. Therefore, I usually go to my office on a daily basis. Sharing the office with other PhD students is an enriching experience because we can share our doubts, distresses and victories. Having lunch together is also nice, because we take a break from work and come back more refreshed to continue it. Nonetheless, there is life outside of work, and this way of thinking may also contribute to making the PhD project a less solitary one. The private life habits I adopted involve mainly being around loves ones (friends and family) and engaging in activities that I enjoy (*e.g.* sports, dancing lessons, travelling and knowing other cultures). My aim is to divide the 24 hours per day between professional and personal life habits as well as sleeping. Nonetheless, I must confess that this is something I am constantly working on, since just as the participants in my master's thesis mentioned: The work-life conflict requires lots of skills to master it; practice and patience being only two of them.

Conclusions

I believe that equilibrium between the adopted professional and private life habits will continue making the PhD project a less solitary one. In addition, it may contribute to its successful completion. As soon as this happens, I could officially be addressed as a doctor, contrary to what has been happening so far in Portugal: Being addressed as a doctor due to holding a bachelor's degree.

Having this in mind, my advice for an international student who would wish to complete his/her doctoral degree in Portugal are:

1) Accept the possibility of your title being "Dr." even when you just started your doctoral degree. Consequently, expect a lot of formality and bureaucracy, combined with a high degree of tolerance and will to help. Portuguese are known for their hospitality, so although there are a lot of rules and procedures that are followed, whenever something cannot be solved, Portuguese are willing to help you.
2) Search the several doctoral degrees offered by most Portuguese universities, in order to identify the one which interests you the most. Usually on the university's website you can find a full description of the PhD degree, its requirements, offered grants and some testimonials. Nonetheless, for more opinions you can search for groups formed in the social networks or ask your professors if their academic and research networks include someone from Portugal who you can contact and ask for some advice.
3) Check the professional life habits I adopted, which include joining various organizations locally and internationally for networking, research and continuing education purposes. Maybe you could adopt some of them, but do not forget the personal life habits! Try your best to find equilibrium between the two of them.
4) Enjoy Portugal's beautiful weather, with its illuminated capital, Lisbon, which was considered Europe's Leading City Break Destinations in 2013 (World Travel Awards, 2015).

"Internationalizing the Teaching of Psychology (IToP)" Research Team: Promoting A Global Perspective in Students

Richard Velayo, Ph.D., Sarika Persaud, Wallis Back, and Sahiba Bhatnagar
Pace University, New York

There are a growing number of psychology instructors and researchers who are exploring ways to incorporate greater international content and infuse enhanced international perspectives in the courses they teach. One strategy in achieving this goal is by providing students the opportunity to join research teams that encourage international and cross-cultural research in psychology.

At Pace University (New York City), there are several full-time faculty members who mentor both undergraduate and graduate students as an important part of their academic experience. In fact, of the 18 full-time faculty members who represent a variety of scholarly interests, at least seven consider themselves as having interests in the areas of cultural and/or international psychology. More specifically, 5 of the 11 active faculty-led research teams (http://www.pace.edu/dyson/academic-departments-and-programs/psychology---nyc/research-groups) provide valuable research mentorship for student academic and professional development. Students may become involved in any or some of research teams as part of their major or program of study by registering for an independent study course, a mentored lab class, or through a thesis or dissertation project. One of the research teams worth noting is called the "Internationalizing the Teaching of Psychology (IToP) team led by Dr. Richard Velayo, Professor of Psychology at Pace University. His research group called "Internationalizing the Teaching of Psychology (IToP) Team (http://rvelayo.jimdo.com/itop-team/) involves research that focuses on strategies that help infuse international content and promote a global perspective within the discipline of psychology at the higher education level. More specifically, IToP's research involves projects related to the following: (1) identifying effective pedagogical strategies to internationalize psychology courses, (2) developing an assessment tool for an internationalized psychology course, and (3) applying Internet-Based Technologies (IBTs) as teaching and research tools to help infuse international content. Research projects generally involve the design and development of online surveys, identification of and access to resources (e.g., instructors, courses, multimedia materials), and curriculum-based applications of IBTs. Student involved in his team get to present their individual or group projects at local, regional, national, and/or international conferences. Some of the psychology conferences at which the IToP team has presented include the annual meetings of the American Psychology Psychological Association, Eastern Psychological Association, Greater New York Conference on Behavioral Research, Hunter College Psychology Conference, International Council of Psychologists, and Pace University Psychology Conference.

Since fall 2014, there have been 10 students who have been part of the IToP research team. There are currently 3 students (one doctoral and two masters) this fall, and at least three others (masters-level) will be joining in the spring semester. Each student is actively undertaking research projects of interest to them, which ties in with one of the topics related to the IToP team research subtopics (as mentioned above). At each weekly meeting, students provide the entire team with updates about their individual work and discuss preparations for presentations (e.g., poster, paper, symposium) at an upcoming conference. Students are encouraged to present their work at student-focused, local, and/or regional conference held during the latter part of that semester or the following semester. This fall 2015 semester, the IToP team highlight three student research projects. Below are brief descriptions written by current IToP students about their projects.

Wallis Back (wb94354n@pace.edu)(M.A. in Psychology)

"Exploring Attitudes Toward Entheogen Therapy as a Means of Improving Spiritual Well-being"

The integration of spirituality into modern western psychological therapy practices has rapidly been gaining relevance, as recent research findings show it to be an integral part of an individual's overall well being. Simultaneously, the increasing approval and funding for entheogenic substance research has re-opened the doors into psychedelic studies and their immense potential for improving spiritual well-being. There lacks research however, on the relationship between an individual's level of spiritual well being and their attitude towards the use of entheogenic substances in therapy. My current research study aims to explore the relationship between these two constructs in both users and non-users of entheogenic substances, in order to better define and understand differences and relationships that emerge between them. I have created and administered an online questionnaire, and I am currently in the process of data analyses for data collected from over 350 participants. Further research may provide a means to more effectively develop and target therapy training and programs to help facilitate higher levels of spiritual and over all well-being.

Sahiba Bhatnagar (sb17859n@pace.edu) (M.A. in Psychology Student)

"Exploring the Integration of Eastern Mindfulness Practices into Western Approaches to Therapy"

My independent study explores perceptions of implementing eastern mindfulness practices in western therapy. After conducting a literature review I found research has shown that despite a participant's perceptions of mindfulness and meditation before experiencing it, almost all experiences of mindfulness were found to be positive when practiced in a therapeutic setting. Additionally, I explored populations that these new therapeutic interventions could be beneficial for. Incoming first year undergraduate students are vulnerable to experiencing depression and anxiety from the life transition. Through surveys, this population also expressed a desire for more education of their faculty and staff on mental health practices as well as peer led mental health groups. With this information I have proposed two research questions: How is mindfulness perceived among the undergraduate college population in America? Using these perceptions, what are the best ways to implement mindfulness based therapy onto campuses? I plan to conduct this research with a combination of surveys and interview/focus groups. The surveys I plan to use are the Five Facet Mindfulness Questionnaire and The College Adjustment Scale.

Sarika Persaud (ap75294n@pace.edu) (Psy.D. student in School Clinical Child Psychology)

"Adolescent Mental Health in the Caribbean: Integrating Religion & Psychoeducational Training"

My experiences growing up as a part of the Indo-Carribean community have led me to take a personal interest in the alarming rates of suicide and depression in Guyana. My research focuses on developing psychoeducational interventions for adolescence, which can be implemented in local schools as a way of providing grassroots mental health services in Guyana. I am exploring the potential of integrating local religious communities as a way of empowering post-colonial communities to find value in their own systems, and using existing methods of healing to supplement the use of evidence-based practices. This preliminary research on this topic will eventually lead into my doctoral dissertation in the Psy.D. Program in School Clinical-Child Psychology program at Pace University.

These student-initiated projects exemplify research that contributes to international content that may be infused in teaching. Such research projects provide not only content that may be shared with other research team members, but also be archived as student research projects accessible to other students and instructors in the departmental for instructional purposes or to motivate further international research. Additionally, such projects help cultivate a more international perspective about the discipline of psychology and a greater appreciation for psychological constructs taking into consideration the cross-cultural and cross-national contexts in which they apply. There is tremendous value in involving students in the process of internationalizing the teaching of psychology. More importantly, it is essential to prepare them for a society that is increasingly becoming global.

For more information about this presentation and of the IToP team, please contact Dr. Richard Velayo at rvelayo@pace.edu or Sarika Persaud (Dr. Velayo's graduate research assistant and Psy.D. student) at ap75294n@pace.edu.

Phases of Public and Private Education at University Level in Mexico: A Local Teaching Experience

Alejandra del Carmen Domínguez Espinosa
Iberoamerican University (UNAM), Mexico

In Mexico, out of the 100,000,000 applicants in higher education, only 10 % are the lucky ones who enter one of the public universities, research centers or federal polytechnics. Due to the lack of space in the public institutions, the private sector has grown considerably. There are many different academic demands between these two sectors that require different strategies for career success as a lecturer in Mexico. Public institutions, like state universities or the National University, receive a specific public budget. In contrast, private institutions have earned prestige and gained private tuition support over the years through their appealing offerings for students.

In this paper, I discuss the implications of private and public alternatives. I base these insights on my 14 years of teaching experience in psychology. Currently, I have a full time position in one of the most renowned private universities. At the same time, I am also a lecturer at the National University, the biggest and most prestigious public university in the country.

Private universities are sustained through tuition paid directly by students. This creates a great deal of pressure on teachers from university authorities. Teachers are pressured to balance between entertaining students, being mentors, and being friends with them while at the same time demanding discipline and performance. For obvious reasons, these things are very difficult to do at the same time. The students have the right to demand a good quality of education, which is reasonable but often misinterpreted. Some students interpret this right as the teacher is there to give them all the benefits and best grades, and they expect the teacher to be subordinate. This creates a great deal on pressure on professors, especially at the end of the semester, when students evaluate their professors. Through this evaluation, students have significant influence. If a professor is graded badly (regardless of how many years of teaching and experience) she or he runs the risk of being denied a promotion or in the worst case scenario – of being fired.

Private universities have smaller numbers of students per classroom. This is in contrast with public universities where auditoriums are used for teaching more often than are classrooms, especially in the first semesters. Thanks to the small groups in private universities, there is an atmosphere of interaction and intimacy between professors and students. At their best, small classes improve the learning environment and help to hold all the students´ attention. At the same time, because of this type of interaction, the role boundary between professor and student may erode.

In the public sector, there is a big distance between professor and students not only in the physical dimensions of the teaching space but also in the large number of students per instructor. Enrollment can be above 50 students in classes and can be 100 in medical classes. In public institutions the professor may adopt a cold and strict attitude towards students without repercussions since student evaluations do not affect his or her job.

In the private sector, curriculum changes take place more easily, due to the need to recruit students. In contrast, in the public sector, this process is slower since more people compose the council board and they have more complicated and restrictive regulations. Private education gives more importance to popular subjects. Both systems support lecture freedom for professors. Private education assures a whole content curriculum that meets program standards due to students' course evaluations. In public education, the professor has the freedom to include or change any subject without running the risk of being fired. A student's learning experiences depends on the quality and skill of the professor.

In private universities, the range of research is very limited since they support their own philosophy or meet popular needs. However, the public universities can provide financial support for any idea in order to develop proposals, as long as it does not exceed the university budget. Private full time professors can develop academic, research and management jobs while public professors can focus in just one field. Still, professors try to work in more than one field in order to get job promotions.

Good and bad students are found in both types of institutions. In my experience, I have students who need to work and study at the same time. The difference is that the students in private schools work to pay their tuition. In public institutions, students work in order to survive. In conclusion, both types of education have advantages and disadvantages. I enjoy and learn a lot from being among these two worlds.

The Tragedy and Legacy of Phineas Gage

John D. Hogan
St. John's University, NY
hoganjohn@aol.com

On September 13, 1848, Phineas Gage, the 25-year old foreman of a railroad construction crew in Cavendish, Vermont, USA, suffered a horrific accident and, inadvertently, made history. As it turned out, the accident he experienced on that fateful day would have important implications for psychology, neurology, and related fields. In fact, his case would end up playing a crucial role in the entire history of brain science.

The job of Phineas Gage and his crew was to prepare the railroad bed for the Rutherford & Burlington Railroad. The boulder impeding their progress was to be blasted away using gunpowder. Phineas was in charge of the explosives. His usual procedure was to drill a hole in the offending rock, fill the hole with gunpowder and sand, and tamp the mixture down with a three and a half foot long tamping iron – the smaller the space the greater the explosion. After alerting his fellow workers, he would light the fuse and run for cover. He had done this many times before, with great success. This time things did not go so smoothly.

On this occasion, after filling the hole with gunpowder, Phineas apparently turned away from the rock, distracted. The tamping iron, still in his left hand, touched the rock and created a spark, igniting the gunpowder. The resulting explosion sent the sharp end of the tamping iron through his left cheek, into his head, exiting at the top. Phineas was thrown back, although he never lost consciousness. The tamping iron was later found more than thirty yards away, encrusted with brain matter.

Phineas spoke immediately after the accident, fully aware of what had happened to him. His fellow workers, aghast at the obvious damage to him, put him on a cart and brought him three-quarters of a mile to the tavern where he had been boarding. Two doctors eventually tended to him, positioning the large skulls fragments back into place and removing the smaller ones. Neither doctor had any hope that Phineas would survive. Phineas, on the other hand, was more optimistic – he spoke of going back to work the next day.

Phineas soon developed a fever – infections were major killers in those days. Other signs suggested he was in great physical distress. The local undertaker even measured Phineas for a coffin. But one of the attending physicians, Dr. John Harlow, refused to give up, working with Phineas day after day, trying everything in his medical arsenal. To almost everyone's surprise, including his family, by November Phineas was well enough to travel to his mother's home in nearby New Hampshire. Harlow visited him there shortly after the New Year. Although he had lost the sight of one eye and the opening in his skull had not completely closed, Phineas appeared to have regained much of his strength and Harlow declared him to be in good health.

After only a short convalescence, Phineas was eager to return to his old job. But now he had a new problem. The railroad declined to hire him back. They realized that his personality had changed. While he had once been one of their best workers -- industrious, friendly, and well-organized, he had become argumentative and short-tempered, and his language had become vulgar and profane. He had difficulty planning and his friends no longer cared to be with him. His personality had changed so much that Harlow would later write "he was no longer Gage."

Phineas was the object of much scientific inquiry and observation as the news of his accident and recovery became known. One important result of the accident was to demonstrate that a brain could suffer tremendous damage, but the person could still survive, largely intact. A logical conclusion was that it was possible to operate on the brain. The second major discovery was to strongly suggest that personality could be found in the brain – something that seems obvious to contemporary thought, but was much less obvious then.

Information on Phineas after the initial excitement is not well-documented and is based almost entirely on the account of his mother and Dr. Harlow. It is known that he participated in one of P. T. Barnum's exhibitions -- a poster has been found describing his appearance. It is also known that he traveled to Chile to become a stage coach driver on the route between Valparaiso and Santiago, a distance of 75 miles. Stage coaches in that part of the world typically used six horses, and managing them would have taken considerable skill. Gage's mother said that Phineas was very good working with animals. Still, it would have been a strenuous job. After seven years in Chile, Phineas returned to the U.S. in somewhat fragile health.

At first Phineas stayed with his mother who had moved to San Francisco to be near her daughter. He briefly held several jobs, but began suffering from seizures that became increasingly debilitating. When he died on May 20, 1860, age 36, the cause of death was listed as epilepsy. The usual assumption is that his death was the result of the earlier brain injury, with his deterioration due to the subsequent scarring and other changes in the brain that took place over time. He was buried in San Francisco, with his tamping iron at his side. But his story does not end there.

Dr. Harlow had lost contact with Phineas when he was in Chile. When Harlow later contacted Gage's mother and found out that Phineas had died, he made an unusual request. Would his mother consider having the body exhumed and the skull and tamping iron sent to Harlow for further examination? Gage's mother, clearly understanding the scientific importance of her son's accident, complied with his request.

Harlow conducted a number of measurements of the skull. One of the first things he noticed was that even though Gage lived long after the accident, his skull had not completely healed. When Harlow completed his work with the skull, both it and the tamping iron were deposited in the Warren Anatomical Museum of the Harvard University Medical School. There they remain, a reminder of the continuing quest to understand the relationship between brain and behavior.

Places to Visit

The town of Cavendish is located in Windsor County, Vermont. The population was 1,367 at the 2010 census. The town is approximately 95 miles northeast of Albany, NY, and 160 miles northwest of Boston, MA. In the Cavendish Town Green, at the intersection of High St. and Rt. 131, there is a Memorial to Gage, placed there at the 150th anniversary of the accident. It gives directions to several locations relevant to the story of Phineas Gage.

The Warren Anatomical Museum is part of the Countway Library of Medicine's Center for the History of Medicine at Harvard University, Cambridge, MA. The Museum's Exhibition Gallery is located on the 5th floor of the Countway Library and displays 300 cases and artifacts from the larger collection, including the skull and tamping iron of Phineas Gage. The Museum Gallery is open to the public, free of charge, Monday through Friday, 9:00am-5:00pm. The Exhibition Gallery is closed on weekends and during certain Harvard University holidays.

Diversified path to the psychological career: Europe vs. USA

Laura Dryjanska
Sapienza University of Rome

Marzia Giua
Private Practice
Rome, Italy

Abstract

Written from the social psychological perspective of social representations, this review paper presents some aspects of the current situation of European psychologists. Opportunities and challenges of academic path and private practice as a psychotherapist are outlined in four countries: France, Italy, Poland and Romania, based on interviews with recent psychology graduates and examination of the official information in original languages in each geo-cultural context. Starting from education, through career choices, numerous possibilities of professional affiliation to the larger context of the general public, a comparison of Europe with the United States brings about a number of surprises and recommendations for enriching intercultural interaction.

Keywords: psychologist, psychotherapist, social representations, psychological associations, European psychology

Introduction

If there were a continuum from unity to diversity in psychology on a given continent, most probably the majority of continents would opt for a position much closer to diversity. In fact, European psychology tends to be considered as diverse as its countries or even regions.

This review paper is written from the theoretical perspective of social representations (Moscovici, 1976, 1988), which used to be considered primarily as a French tradition of research (Farr, 1987) that is slowly becoming a more diffused, genuinely European alternative to the dominant social cognition approach imported from the United States. In line with the indigenous psychology (Kim, Yang, & Hwang, 2006), it pays attention to the context where commonsense knowledge is transmitted and transformed. Since it is impossible to take into account every single European country, four contexts of France, Italy, Poland and Romania have been chosen. While the authors interviewed students who graduated in psychology in each of these countries, they also gathered the official information from national psychological associations and government websites in original languages. Given the diversity among European countries, the choice of these four contexts was thus due to the authors' linguistic abilities and knowledge about conditions in each country. Such awareness of context appears as necessary when the researchers (who are also products of culture) assess social representations since "it is hard to remove the powerful lenses of individualism from our sense making – in both everyday and research contexts" (Howarth, 2002, p. 258).

Clearly, psychology is not all about research. Therefore, in the contemporary scenario of economic difficulties faced by Europe, this review paper presents some perspectives of young people who decide to embark on the diversified path to the career as a psychologist. It includes the required education, possible further steps, prospective employment and options of professional affiliation, specifically in two cases: of a psychotherapist primarily involved in private practice and of a researcher in academic setting. In the United States, in 1973 it was proposed to use different degrees to designate the practitioner's role (PsyD) from the scientist role (PhD); the former focuses primarily on clinical service and less on research (Norcross et al, 2004) by training students to practice what they learn about the full spectrum of psychological science, while the latter gives the fundamentals of practice, but its primary job is training students to conduct research (Peterson, 1997).

Realizing a bit more about the challenges that European psychologists are facing and being aware of some underlying assumptions that many of them may have concerning the discipline, can be useful when implementing international relations on a professional level or simply travelling to Europe for private reasons and successfully managing personal encounters.

Literature review

The recent literature on the career path of a psychologist in research and private practice that compares the situation in the United States and in Europe is not yet very extensive, probably due to dynamic and ongoing changes in various European countries. Arnett (2008) points out to the need of studies in psychology that are not solely focused on the "rich who get researched", while Donn and colleagues (2000) specifically compare North America with Europe. In terms of psychology and psychotherapy in health care, Van Broeck and Lietaer (2008) propose a review of legal regulations in 17 European countries. Another way to assess differences between the two continents consists of pointing out the competences that a psychologist should possess according to pre-established standards (Bartram & Roe, 2005) and his or her career prospects (Sternberg, 1997). More detailed comparisons of approaches to psychotherapy in Europe and United States include relational (Aron, 2007), experiential (Greenberg, Watson, & Lietaer, 1998), cognitive-behavioral (Hoffman et al, 2012) and psychoanalytic psychotherapy (Jacobs, 2002), to mention just a few. On the other hand, some authors focus on career prospects of psychology students in Europe (Knight & Vainre, 2011) and in the United States (Borden & Rajecki, 2000). Last summer in Canada the topic of this article has been treated by Giua and Dryjanska (2015).

North American standards

The American Psychological Association (APA) provides clear and comprehensive information concerning the career path in psychology (APA, 2011). In the United States, it is possible to earn bachelor's and master's degrees in psychology. While some doctoral programs require a master's degree in psychology, more commonly applicants can enroll in the doctoral programs with a bachelor's degree and work directly on a doctoral degree. The majority of doctoral degrees take 5–7 years to complete, and a one-year internship is necessary in order to become a professional clinical psychologist. According to the APA (2011), "some universities and professional schools offer a PsyD degree in lieu of the traditional research doctoral degree (PhD) or EdD degree. These PsyD degrees, with their emphasis on clinical psychology, are designed for students who primarily want to do clinical work exclusively." Moreover, one has to be licensed as a psychologist to exercise independent practice of psychology anywhere in the United States. The state licensing boards review applicant's educational background and their successful completion of at least two years of supervised professional experience before granting the permission for him or her to take the licensing exam. Information about state and provincial licensing requirements is provided by the Association of State and Provincial Psychology Boards (ASPPB).

Diversity of psychology in four European countries

Four European countries discussed in this review paper include France, Italy, Poland and Romania – diverse contexts that nonetheless present some similarities when it comes to a career path in psychology, often thanks to the processes prompted by the European Union, of which all of these states are members. Each one with distinct language, customs, history and other aspects of culture offers a unique context for the development of self as a psychologist. In line with the recommendations of Hermans (2001), this paper emphasizes increasing complexity and shifts attention from core to contact zones, discussing the social representations of North American psychologists by their European colleagues.

Education

At least in its early stages, the education required of a European psychologist is currently quite similar across different countries, at least concerning the number of years of study required. This fairly recent situation concerns current psychologists in their early thirties and younger. In 1999 almost thirty European ministers responsible for higher education signed a joint declaration – the official starting point of the so-called Bologna Process, aimed at creation of a common European Higher Education Area by 2010. As a result, "governments have developed policies that fit the European agenda towards converging systems of higher education'' (Huisman & Wende, 2004, p. 355). Their main focus - the introduction of the three-cycle system (bachelor/master/doctorate), strengthened quality assurance and easier recognition of qualifications and periods of study – brought about the fairly unified length and requirements of the early stages of career in psychology: from three to four years to earn a bachelor degree in psychology, one to two years for a master degree in psychology and a minimum of three years for a doctorate in psychology.

While the Bologna Process regulates quite well the academic career in psychology focused on research (on a doctorate level, a PhD), more ambiguity concerns the private practice career in psychology focused on psychotherapy (on a doctorate level, a PsyD). Typically, the latter have a tougher admission process and the programs tend to be more expensive. It is worth mentioning that while the term "PhD" is familiar to the majority of psychologists, "PsyD" tends to be less known in continental Europe where these types of programs are often known as "specializations" ("spécialisation en psychothérapie" in French, "specializzazione in psicoterapia" in Italian, "specjalizacja" in Polish and "specializare în psihoterapie" in Romanian). In general, European PhD programs in psychology are accredited by the national ministries of education, as opposed to "specialization" programs in psychology (mainly in psychotherapy) accredited by the national ministries of health.

Table 1 summarizes the minimum number of years necessary to complete different types of degrees in psychology, based on national legislation.

Table 1. Comparison of the minimum number of years necessary to get a degree in countries under scrutiny, based on national legislation (Civic Impulse, 2016; Lege nr. 288 din 24, 2004; Loi n° 2013-660, 2013; D.M. 270/04, 2004; Dz. U. 2005 Nr 164 poz. 1365, 2005)

COUNTRY	BACHELOR	MASTER	DOCTORATE
France	≤ 3 years	≤ 2 years	≤ 3 years
Italy	≤ 3 years	≤ 2 years	≤ 3 years
Poland	≤ 3 years	≤ 1.5 years	≤ 2 years; ≥ 4 years
Romania	≤ 3 years	≤ 1 year	≤ 4 years
USA	≤ 4 years	≤ 1 year	≤ 4 years

Career in private practice

In Europe, a person is generally considered as a psychologist upon completion of their master degree in psychology or a minimum of five years of university training (Van Broeck, & Lietaer, 2008). Italy constitutes an exception: holders of a degree must pass a state examination, complete a one-year supervised internship and register as a member of the National Council of Psychologists ("Ordine degli Psicologi" in Italian). Following this first step, those interested in private practice need to obtain a license or a title of a psychotherapist. A close equivalent of the North American PsyD, the "specialization" tends to be awarded by specific schools of thought, such as specialization in cognitive-behavioral therapy, systemic-relational therapy, hypnosis, psychodynamic therapy, etc. Schools that integrate more approaches have become more popular, especially in Eastern Europe, not to mention specific concentrations or sub-specializations that apply a certain kind of therapy to children, adolescents or other specific groups of clients or patients. However, historically the origins of training in psychotherapy in Europe are marked by a "solitary supremacy of psychoanalysis" (Gemignani & Giliberto, 2005, p. 171).

Once the expensive and lengthy supervised training is completed, a young psychotherapist faces the challenge of finding the recipients of his or her services. In France, the situation is particularly unstable (Bernaud, Cohen-Scali, & Guichard, 2007) due to the decrease in state involvement (various French ministries used to clearly define qualifications, recruitment processes, career conditions and monitoring of activities of French psychologists) and the pressure from the European Union to start establishing new standards, often from Northern Europe.

Based on the results of a national survey conducted in 2012-2013 with 1500 Italian psychologists registered as members of the National Council of Psychologists ("Ordine degli Psicologi" in Italian), Bosio and Lozza (2013) reported that the average annual income of recent graduates is slightly above the poverty threshold defined by the Italian National Institute of Statistics (ISTAT). Simply put, employment opportunities for psychologists are scarce and not very attractive. Due to the financial crisis, it is also difficult to find and/or keep clients in private practice, which results in unemployment and underemployment. Notwithstanding, the number of Italian graduates in psychology has been declared as "very high, considering the Italian population as a whole" (Job, Tonzar, & Lotto, 2009, p. 311), with the increase of approximately 10% per year.

In Poland, where psychology is a fairly new discipline for decades restricted by Marxist philosophical approach (Kaczkowski, 1967), professional psychologists face the challenge of the lack of legal regulations that would protect them from the infiltrations of pseudo-scientific methods and diagnostic tools (Brzezinski, 2014). In turn, this has negative consequences on the social representations of psychologists among the general public. Various myths penetrate Polish society, such as "psychologists always analyze everything and everyone around them", "every psychologist is a psychotherapist", "those who study psychology do it to solve their own mental problems", etc.

Similarly, in Romania the levels of stigma and discrimination against people with mental illness and therefore a shame attached attending psychotherapy are quite high (Evans-Lacko et al., 2012). School/educational psychology tends to be a popular orientation among students since parents often declare to be more willing to invest in psychotherapy for their children rather than themselves (Negovan & Dincă, 2014).

As in Poland, myths and erroneous perception of psychotherapy cause potential patients or clients to turn to other types of therapy, such as complementary and alternative, instead of psychotherapy (Dumitrașcu, 2014).

In general, in Europe there is a plethora of psychotherapy approaches and various entities that offer supervised training. On the other hand, due to negative attitudes of the general public towards the mental healthcare including interventions by psychotherapists, ongoing efforts through large nationally and locally based programs that fight the stigma shall be further implemented and monitored (Evans-Lacko et al., 2012).

Overall, in Europe the differentiation between a psychologist (someone who has a degree in psychology) and psychotherapist (someone who is licensed to run a private practice) is not very clear among lay people. For the most part, they do not realize that it is necessary to be a psychologist in order to become a psychotherapist, and the two terms are used interchangeably, which creates confusion and contributes to some myths about the profession. Moreover, the media have widely contributed to the social representation of a psychotherapist anchored in the figure of a psychoanalyst, the use of a couch and specific setting, making it more difficult to convey to the general public how diverse and dynamic are the numerous approaches to psychotherapy.

Academic career

As a result of the Bologna Process, European psychologists involved in research have a much more linear career path. Mainly affiliated with universities, upon completion of a doctorate program, successful candidates enter highly competitive academic career, usually at first benefitting from post-doc positions or research grants. Across Europe, they dedicate time to research and teaching, publishing results and presenting them at national and international conferences.

What differs them from their counterparts in the United States? A study of personal homepages of European academic psychologists revealed that they almost exclusively offer information about result-oriented research activities and publications. Additionally, it is common for them to provide links that demonstrate a network of academic connections. According to Dumont and Frindte (2005), self-presentation is limited to information about academic work, possibly due to their understanding of personal homepages that follows "the common ethos of science, that is to say, scientific results

should be independent of the scientists who produce them" (Dumont & Frindte, 2005, p. 81).

Another issue concerns the choice between publishing in English (encouraged by many European monitoring and evaluation entities) or native language. Being able to read and write scientific papers in English is a must to join the global discourse, yet at the same time researchers from non-English speaking countries have the duty to publish in their native languages in order not to lose considerable part of their native audience (Brzeziński, 2014).

Thanks to the international language of science and opportunities of funding from the EU (unlike private practice), academic career tends to be more international and involves significant mobility opportunities across Europe. Alongside numerous benefits, some authors nevertheless point out the challenges of this situation, such as transience and risk identified by Richardson and Zikic (2007) as two important dimensions of the "darker side" of pursuing an international academic career.

Professional affiliations

Virtually every European country has some sort of a national entity for psychologists. Their authority, function and character vary considerably within Europe.

Among the four countries considered in this paper, Italy stands out as one with the most developed and complex structure of possible professional affiliations open to graduates in psychology. On the one hand, practitioners are obliged to become a part of the National Council of Psychologists ("Ordine degli Psicologi" in Italian) that requires a five-year diploma in psychology, proof of at least one-year supervised practice, satisfactory grade on the national examination and payment of annual membership fees. On the other hand, those interested in the academic career have an easier path of simply applying for the membership of the Italian Psychological Association (AIP in Italian) following the acquisition of a PhD degree and payment of annual membership fees. While the National Council of Psychologists ensures recognition of a professional (dealing mainly with the Italian Ministry of Health), the Italian Psychological Association (AIP) provides opportunities for the exchange of research during conferences and gives voice to the academic community in discussions with the Italian ministry of education.

The French scenario somewhat mirrors the Italian one, with the Federation of French Psychologists ("Fédération Française des Psychologues et de Psychologie" in French) for practitioners (but also open to academicians and students) and the French Psychological Society ("Societé Française de Psychologie" in French) that caters mainly to psychologists in the world of higher education.

In Poland and Romania, national psychological associations recognize respective national diplomas in psychology and offer opportunities for further training, dialogue with governmental entities and professional growth. Polish Psychological Association ("Polskie Towarzystwo Psychologiczne" in Polish) and College of Romanian Psychologists ("Colegiul Psihologilor din România") try to appeal to both academicians and practitioners, also providing lists of available opportunities of further training.

Each one of the associations (except for the National Council of Psychologists) publishes scientific journals and belongs to the European Federation of the Psychologists' Associations. This entity has the ambition to appeal to all psychologists by promoting the EuroPsy, a European qualification standard for psychologists and a registry of European professionals who have achieved it. However, for example in case of Italy the Federation did not partner with the National Council of Psychologists (which would be the best choice, given its authority over examinations and official Italian registry). Moreover, it is not very well known and many psychologists may not see a point of acquiring additional certification beyond national standards, especially since the procedure requires time and money necessary for obtaining official translations and notarized paperwork.

Throughout Europe, specific associations that often (but not always) correspond to the APA divisions exist in an independent way on different levels: regional, national, European and international. For example, in case of psychotherapists, a school that offers specialization in systemic-relational therapy may belong to the European Family Therapy Association. Similarly, academicians usually have a specific area of interest in psychology and tend to be active within that area on different levels. For instance, a social psychologist from Poland may choose to become a member of the Polish Society of Social Psychology (PSPS) as well as the European Association of Social Psychology. A fairly common practice in scientific societies is the requirement of presenting recommendations from two active members in order to apply.

Overall, the world of associations and societies is quite complex. There is no simple rule that would apply to all countries. While generally in Europe being a psychologist still means having graduated after five years of studies in this discipline, in Italy it additionally requires being enlisted in the national registry of the National Council of Psychologists. All other associations are on a voluntary basis and the fact that someone's name cannot be found on the list of members does not mean that they cannot legally present themselves as psychologists.

Social representations of psychologists

Introduced by Moscovici (1976), social representations were a construct that encompassed commonsense knowledge and lay theories about a new phenomenon in France in the fifties – psychoanalysis. Shared by certain groups of society, these opinions, judgments, images and metaphors served the function of familiarization and enabled communication. Moscovici realized that social representations could be extended to other phenomena, since they reflect how people think and interpret surrounding reality using a number of processes. Since then, Moscovici has considerably elaborated his theory (1988, 1998, 2011) and many social scientists have used social representations in their research.

Recently, de Rosa, Fino and Bocci (2013) have taken the original object of the seminal study – psychoanalysis and psychoanalysts to examine their social representations in France and Italy, also taking into account the information from various sources in the Internet. Without doubt, among the general public in Europe the distinction between a psychologist and psychotherapist is not very clear, let alone familiarity with different types of therapies. Movies, in particular by Woody Allen (Gordon, 1994), constitute a source of images that nurture laymen thinking about psychotherapy.

How about European psychologists themselves? Professionals are not free from commonsense thinking about their occupation. Romaioli and Contarello (2012) have conducted interviews with cognitive-behavioral, constructivist, psychodynamic and systemic-relational therapists in order to identify the representational processes that they employed to organize knowledge about change in their clients' lives. Social representations of therapists would often reify the metaphors used, showing their ideological attachment to the system of thought of a specific school. As shown by Romaioli and Contarello (2012), reified metaphors are the phenomenological description of different kinds of psychological problems, enabling the identification of linguistic repertoires more practicable for the therapist, aimed at constructing effective communication during therapy sessions. For example, cognitive-behavioral therapists represented change in terms of a slow and cumulative acquisition of instruments with which to cope with everyday difficulties (a metaphor of an encyclopedia); while psychodynamic therapists represented change as a regeneration of one's own roots that enables new growth (a metaphor of a tree). Such research (Romaioli & Contarello, 2012) is an example of the application of a narrative or conversational approaches to the study of social representations of a specific object – in this case the process of change in the lives of clients of psychotherapists. It also has an added value of appealing to metaphors that are likely used in other cultures, such as the metaphor of a tree (Raval, & Kral, 2004), in order to understand the process of socially constructing reality.

Overall, the European general public as well as psychologists themselves faced with the complex world of psychology and psychotherapy have developed articulate ways of thinking and representing these phenomena, rich in images, metaphors and rhetoric devices. In Europe, there are multiple points of reference on various levels and the lack of a single firmly established authority concerning standards, accreditation, monitoring, definitions and ethics. In North America, the American Psychological Association constitutes such a point of reference to universities and practitioners. Unsurprisingly, many Europeans turn to its standards, especially when it comes to the publication manual.

Conclusions

While this review paper concentrates on educational input rather than performance output, the authors recognize the need for considering both aspects, following the definition of the content of psychologist's profession and its various specializations across Europe (Roe, 2002). Considerable differences persist between North American and European models of clinical psychology training (Donn, Routh, & Lunt, 2000), although efforts are being made towards the standardization of the profession of a psychologist and continued professional development (Poortinga, 2015), yet for some common standards (especially publication manual), the American Psychological Association is a firm point of reference.

What are some practical recommendations to a North American psychologist when interacting with her European colleagues? First, instead of referring to a "PsyD" it is much better to ask about a "specialization" of a psychotherapist, enquiring about her particular school of thought or approach, years of study and supervised practice. Concerning a "PhD", misunderstandings are not very likely. However, while throughout the entire Europe someone is a doctor in psychology only after obtaining a doctorate degree, Italy constitutes an exception: even a BA in psychology legally entitles a person to the title of a doctor in psychology ("dottore" in Italian, abbreviated "Dott." or "Dr").

Asking about a license in Europe can also be tricky. Each country has different regulations and it is safest to first enquire about what are some national regulations concerning private practice and if there is an obligatory, public national registry of psychologists and psychotherapists. A conversation about different associations and societies could also open up a whole new world, quite distinct from the American Psychological Association and its divisions. Moreover, there seems to be a tendency among European psychologists not to go into as many personal details as their colleagues from the United States, emphasizing the results of their research, publications and professional status.

In sum, when interacting with European psychologists it is wise to first define and explain both contexts. The efforts to overcome the human tendency to ethnocentrism in psychology should be mutual and conscious (Takooshian, 2003). Such exchange among researchers probably brings fewer surprises than among psychotherapists, but will surely be fruitful, eye opening and stimulating in both cases.

The Development of Psychology in Brazil: Its Early History

Carla Luciano Codani Hisatugo, PhD
Universidade Metodista de Sao Paulo, Sao Paulo, Brazil
carla.hisatugo@metodista.br

The history of Brazil and of Brazilian Psychology are intrinsically related. The political, economic, social, educational, juridical and philosophical aspects had a grand influence in the development process of the Psychology. Earlier psychology themes were learned with the Jesuits (1500 – 1808) at the catechesis of natives and children at settlers, encompassing emotion, memory, behavior and adaptation. Provisions made by the Portuguese Court to live in Brazil in 1808, involved concern about public health and hygiene. Psychopathological disturbances involving addictive behavior and mental disabilities were treated by psychiatry hospitals or led to prison – with the medical support of the Brazilian Social Hygiene Movement (Furtado, 2012; Mitsuko, 2012; Vilela, 2012).

During the period of 1808-1900, philosophical and physiological knowledge from Europeans and North American professors, provided important information for Brazilians, involving psychological topics related with passion and emotion, assessment and possible treatment for mental hallucinations, epilepsy and hysteria (Soares, 2010; Vilela, 2010; CRPSP, 2011). Pioneers who made early studies in Brazil about Psychology were self-taught and started to study psychological knowledges in the Teacher Training Institutions. It is impossible to mention all the pioneers, and some remain anonymous. To mention a few: Anita Paes Barreto (1907 – 2003); Annita de Castilho e Marcondes Cabral (1924 – 2004); Aníbal Cipriano da Silveira (1902-1979); Antonio G. Penna (1917 – 2010); Dante M. Leite (1928 – 1976); Durval Marcondes (1899 – 1981); Eliezer Schneider (1910 - 1998); Emilio Myra y Lopes (1896 – 1964); Father Antonius Benkö (1920 – 2013); Franco Lo Presti Seminerio (1923 – 2003); Paulo Rosas (1930 – 2003); Mathilde Neder (1923 -); Mother Cristina S. Doria (1916 – 1997); Nise da Silveira (1905 -1999); Raul Carlos Bricquet (1887 – 1953); Silvia Tatiane Maurer Lane (1933 – 2006); Therezinha Lins de Albuquerque (1926 -); and Ulisses Pernambucano de Melo Sobrinho (1892 – 1943). The pioneers were responsible for important landmarks of psychology in Brazil, as noted in Table 1 (Furtado, 2012; Mitsuko, 2012; Vilela, 2012; Lisboa & Barbosa, 2009).

Table 1. *Landmarks of Psychology in Brazil*

1890's	Earlier dissertation thesis by physicians to conclude Medical Schools with psychological themes
1906	First Experimental Psychology Brazilian Lab
1930's	First classes of Psychology – Graduate courses of Philosophy, Educational and Medical Graduation Courses
1940's	First scientific journals in Psychology First societies of psychology
1950's	First Psychology graduate courses in the Universities of Sao Paulo, Minas Gerais, and Rio de Janeiro
1960's	First post-graduate programs in Psychology
1962	Officially recognition by the President Joao Goulart of the Psychology in Brazil as a science and a professional practice (August 27, 1962)
1971	Creation of the Councils of Psychology

Psychologists' discussion of abuses in the political practices within the society has been one of the important issues for the social psychology. The Brazilian League of Mental Hygiene, founded in 1923, created a psychology laboratory for psychiatry studies that later on became influenced by eugenic practices, leading the exit of many psychologists of the league. By the 1940's, most of the abusive practices of the Brazilians Social Hygiene Movement became extinct. (Furtado, 2012; Mitsuko, 2012).

Another roadblock for the development of the psychology and its benefits for society was the military dictatorship (1964 - 1985). It induced a socially committed psychology practice. The abusive political practices included threat, exile and torture of many psychology professors. After this dark period, by the 1990's there was an increased number of Psychology courses and post-graduate programs with more published studies--a scenario that continues until today (Soares, 2010; Vilela, 2012).

Nowadays, Brazil has 270.605 psychologists, 23 Regional Psychology Councils and a Federal Council of Psychology (CFP, 2016). There are 401 Courses of Psychology and 64 Post-graduation Programs. Many discussions of possible improvement of practices and research remain (Tourinho & Bittencourt, 2010). Nevertheless, one must consider all the victories over past challenges to Psychology in Brazil since its inception, becoming nationally and internationally recognized as a respected science and profession.

Reports

Volunteering in the Kingdom of Bhutan

Darren Smith
California State University Sacramento
darrenkensmith@gmail.com

For many travelers who are into "off the beaten path" types of destinations, the Kingdom of Bhutan, a nation of around 600,000 nestled in the Himalayas, represents the holy grail of destinations. It is a nation seldom visited by tourists, a large part of that likely due to the approximately $250USD/day fee imposed on travelers for a mandatory guide, accommodations, and food. As such, the culture remains comparatively uninfluenced by the Western world. It is a nation that welcomed television and the internet as recently as 1999, and where both men and women wear traditional Bhutanese clothing as part of their everyday dress.

So, in the summer of 2014 when the opportunity arose to volunteer at the Jigme Dorji Wangchuck National Referral Hospital (JDWNRH) in Thimphu, the capital city, I jumped at it. I was there for almost 3 months, and it was an unforgettable experience for which I'll always be grateful to Health Volunteers Overseas (HVO), the organization which arranged my placement, provided my accommodation, and allowed me to experience this fascinating country without the exorbitant tourist fees.

The mission of HVO centers around empowering local healthcare professionals in developing nations and furthering the quality of healthcare provided. It accomplishes this by sending licensed healthcare professionals from a number of different countries to various locations around the globe to work alongside local professionals, provide didactics, presentations, and make suggestions as treatment situations arise. It also provides fantastic opportunities for healthcare professionals from Western nations to learn about the culture and healthcare practices of the locals and to exchange knowledge. As such, the aim is much less about imposing one's own ways and training on local healthcare workers than it is about collaboration and mutual learning.

The hospital I was placed at has a small psychiatric and substance detox unit that accepts volunteer therapists (psychologists, social workers, MFT's, etc.) or psychiatrists for 3-month placements. When I was there, there were 2 psychiatrists in the entire country, both located at JDWNRH, and no graduate-level trained psychologists, or graduate schools that offered such training.

The psychiatrists, one Bhutanese and the other foreign-born, principally saw patients on an outpatient basis but would also make rounds on the inpatient unit. The hospital itself is a referral hospital that sees patients from across the country. And although Bhutan is small, the infrastructure- namely the oftentimes windy, dirt roads- makes traveling to the hospital for treatment a long and trying ordeal for many of the patients.

For me, this meant that the patients I saw- both on the inpatient unit and on an outpatient basis- were often from distant locales and would only be in Bhutan to receive treatment for short periods of time. This of course provided its own set of unique challenges, as did the fact that most patients spoke Dzongkha (the official language), Nepalese, or some local dialect much more fluently than English.

Thankfully, I had Ugyen, the local therapist with whom I worked most closely. Upon receiving his bachelor's degree in psychology in India and returning home to take a position at the hospital, he became the defacto therapist on the unit. I can't imagine being thrust into that role after my bachelor's degree! Luckily for me and for the patients he served, Ugyen is a wonderfully personable, intelligent, and empathic person. And, through his various interactions with HVO volunteers, readings done in his own time, and his undergraduate training, he is quite a solid therapist.

Ugyen and Myself In Front of JDWNRH

Being that my work there would take place over just a short period of time, my focus was not on direct patient care but in working with Ugyen in a collaborative, supervisory role to improve his skills as much as possible in the three months I had with him. He also served as a capable translator when I needed one!

During our time together, I worked with Ugyen on developing Cognitive Behavioral Therapy skills. This approach seemed to fit well with the shorter-term nature of the therapy that was often conducted in our outpatient setting. And, not unlike the patients we might see in the West, many who presented for treatment had some variations of anxiety or depressive disorders that seemed to be quite amenable to CBT treatment.

In spite of its international reputation as one of the the "happiest nations on earth" (Bhutan is the country whose government actually measures Gross National Happiness) and a peaceful Buddhist nation, Bhutan struggles with many of the same mental and behavioral health issues as other countries, sometimes to an extreme extent. Alcoholism is rampant, as is domestic violence, physical and sexual abuse of minors (often at the hands of those most trusted such as teachers and monks), and so forth. (Arora, 2013; Dorji, 2014; Global Initiative, 2016; Kelly, 2013; Royal Government of Bhutan, n.d.; Sundas, 2016.). This meant that we saw a steady stream of such cases in both the inpatient and outpatient settings, which was both discouraging but also heartening in that it meant that people were reaching out and accessing these relatively novel resources available to them.

In addition to many of the mental health and social issues I was accustomed to seeing in the USA, there were also various fascinating, unique, and culturally laden cases, which often didn't fit neatly into any DSM diagnosis that I was familiar with. Among these were several cases that were understood locally as possession. Prior to my experience in Bhutan, I had assumed that what was known in some quarters of the world as spiritual possession could most likely be classified as some type of psychotic disorder such as schizophrenia, well-known to the west. While such cases certainly were brought to our attention, other cases could not be so easily categorized.

For instance, I saw a 10th grade boy in the hospital following a suicide attempt. He was admitted first into intensive care after trying to hang himself, being found unconscious by his brother. He was not able to talk for some time, and in addition to the bruising on his neck appeared to have some residual cognitive impairment due to hypoxia. Interestingly, he seemed to be just as happy as could be and denied any kind of difficulty in school, personal, or family life. His family members denied noticing any change in behavior or depression leading up to the event. He had no memory of hanging himself and was absolutely puzzled about why he would attempt such a thing, particularly because everything seemed to be going well for him. He was quite surprised when he woke up in the hospital and heard about what had happened.

When I met with the attending physician who was treating him, he explained to me that many Bhutanese people, himself included, believe that the soul of someone else who has died may inhabit the body of a living person, causing them to act as the deceased person had acted. The doctor explained to me that what had probably happened was that since the boy was attending a school where a female student had hanged herself recently, her spirit likely then possessed him, causing him to hang himself.

Needless to say, it was fascinating to see how culture, religion, and traditional medicine interacted in case conceptualization and treatment. Unfortunately, all too often I did observe instances where people with sometimes severe mental illness were deprived of treatment in favor of exorcisms or isolation and inhumane treatment. Psychology and psychiatry are very new disciplines in the country, and for them to become known, understood, and accepted will take many more years, I suspect.

In other ways, however, Bhutan has a lot to teach the West when in comes to family and community support of patients with severe mental illness. I was always impressed by how the patients on the inpatient and detox wards always had some family members or friends at their side. I was also impressed with the general compassion with which the staff treated patients.

Outside of my work at the hospital, I passed a simply amazing time with the wonderful, hospitable, and friendly people of Bhutan. Some of the best hiking and trekking in the world can be found there, and some of the scenery- monasteries built high up in the mountains seemingly clinging to the very ledges they overlook- is breathtaking.

Tiger's Nest Monastery, Bhutan

I encourage anyone who is interested in this volunteer possibility to check out the HVO program: https://hvousa.org/ourwork/programs/special-projects/

I continue to volunteer with HVO in helping to screen potential volunteers, and would be happy to speak with anyone who would like more information. I can be reached at darrenkensmith@gmail.com

Dr. Pir receives Organization of the Year award for IMCES, the organization she founded in 1989, for her tireless commitment to serving the culturally and linguistically diverse communities in Los Angeles.

Dr. Pir Honored with "Organization of the Year" Award for Commitment to Diversity

Tara Pir, PhD

Founder and President, Institute for Multicultural Counseling and Education Services, Inc. (IMCES)

Dr. Pir was recently honored with the prestigious "Organization of the Year" award presented in Washington, D.C. by PR News in recognition of the demonstrated commitment to diversity by her organization, the Institute for Multicultural Counseling and Education Services, Inc. (IMCES).

IMCES was selected for this distinction from a long and impressive list of organizations, agencies, academic institutions, professional associations and other nonprofits that have demonstrated a commitment to diversity and excelled at communicating their diversity achievements, such as Covered California, Anthem Foundation, the Canadian Alliance on Mental Illness and Mental Health, the California Endowment, and the Medical University of South Carolina. Entries were judged by a blue-chip panel of public relations executives, the staff of PR News, and peers.

Dr. Pir made the strong commitment to contribute to the community in two major domains:

Commitment to Providing Comprehensive Services to the Community

IMCES, a nonprofit organization as a community clinic that Dr. Pir established in 1989 has, from its beginning, demonstrated a strong commitment to promote social justice and human rights in action on a day-to-day basis, based on the principle of inclusion by design. From day one, IMCES has focused on addressing disparities in access to health, mental health, social and legal services among culturally diverse communities.

Dr. Tara Pir at Awards Ceremony with Organization of the Year award in recognition of her demonstrated commitment to serving the health, mental health, social, and legal services needs of diverse target population in Los Angeles County through professionals with cultural and linguistic expertise in over 10 languages.

IMCES receives the Organization of the Year award for its commitment to diversity with the focus on practicing the principle of inclusion by design demonstrated throughout its organization.

Dr. Pir consistently moves from vision to action. For example, with the belief that health and mental health is the human right of everyone, she creates an even ground for everyone to walk on by providing the highest standard clinical services and advocacy programs for the most needy, underserved, vulnerable, diverse populations in Los Angeles County through professionals with cultural and linguistic expertise in over 10 languages.

Commitment to Professional Workforce Development

Dr. Pir's strong commitment to high standard, relevant workforce development for the helping professions in community based services led to the developing of doctoral and residency programs with a focus on leadership and practicing inclusion, accredited by the American Psychological Association (APA). Her programs have been recognized as unique, futuristic models for clinical training in psychology nationally and internationally. For more information about IMCES, please visit our website at www.imces.org.

Dr. Pir meeting with Congresswoman and former Speaker of the House, Nancy Pelosi, at U.S. Capital event, describing IMCES's commitment to service provision as well as high standard workforce development, the APA accredited clinical training program for the helping profession of psychology.

Dr. Pir and staff demonstrating the power of commitment to diversity and inclusion for multicultural, multilingual needed service provision to our vulnerable population in Los Angeles County.

Tara Pir Received National Award for Pioneering International Service

Leland Keel
lelandkeel@imces.org

Dr. Pir was recently honored with the prestigious "Organization of the Year" Award presented in Washington, D.C. by PR News, in recognition of the demonstrated commitment to diversity by her organization, the Institute for Multicultural Counseling and Education Services, Inc. (IMCES).

IMCES is a nonprofit organization established as a community clinic by Dr. Pir in 1989. From its beginning, IMCES demonstrated a strong commitment to promote social justice and human rights in action on a day-to-day basis, based on the principle of inclusion by design. From day one, IMCES has focused on addressing disparities in access to health, mental health, social and legal services among culturally diverse communities.

IMCES was selected for this distinction from a long and impressive list of organizations, agencies, academic institutions, professional associations and other nonprofits that have demonstrated a commitment to diversity--such as Covered California, Anthem Foundation, the Canadian Alliance on Mental Illness and Mental Health, the California Endowment, and the Medical University of South Carolina. Entries were judged by a blue-chip panel of public relations executives, PR News staff, and peers.

IMCES was also recognized for its workforce development. IMCES has developed doctoral and residency programs accredited by the American Psychological Association (APA), with a focus on leadership and inclusion. Her programs have been recognized as unique, futuristic models for clinical training in psychology nationally and internationally. For more information about IMCES, please visit our website at www.imces.org.

Many government officials saluted Dr. Pir and IMCES at the Awards reception, such as former House Speaker Nancy Pelosi. For any details, check wwww.imces.org

---

Announcements

Meaning Conference 2016 - Call for Papers

The International Network on Personal Meaning (INPM) is pleased to announce the **9th Biennial International Meaning Conference** (Second Wave Positive Psychology Summit) to be held July 28-31, 2016 in Toronto, Canada.

This is the only international conference focusing on **second wave positive psychology** (PP2.0), which embraces the dark side of life and empowers humanistic values. It emphasizes cutting-edge research and innovative positive interventions from the world's leading psychologists, including **Michael Steger**, **Carol Ryff**, **Clara Hill**, **Itai Ivtzan**, **Piers Worth**, **Veronika Huta**, **William Breitbart**, **Crystal Park**, **Dmitry Leontiev, Robert Neimeyer**, **Mick Cooper, Kirk Schneider**, **Suemay Chan**, **Paul T. P. Wong**, and more.

In addition to several pre-conference workshops for professionals in mental health and the workplace/organizations, the highlights of the conference include:

Second Wave Positive Psychology Summit to explore the new frontiers of positive psychology in research and applications,

Panel on Meaning-Centered Interventions in professional practices, and a multi-disciplinary

Panel on Terrorism and Heroism consisting of **Jordan Peterson, Michael Lerner, Alex Batthyany,** and **Alex Pattakos**.

To encourage research in PP2.0, we invite graduate students to enter a **Scholarship Competition**; for details, click here.

To submit a **Proposal (Symposium, Workshops, Papers, or Posters**), click here. The submission deadline is April 30, 2016, and notifications will be sent before May 25, 2016. Please note that the early bird registration deadline is May 31, 2016.

For more information on the conference, pre-conference workshops, and registration, click here.

The Role of Psychology in Positive Social Change

International headlines document the challenges of political extremism, racism, refugee flows, and violent conflict. Political psychology is an approach within the broader discipline that is uniquely positioned to be able to address research questions on these social challenges. Moreover, political psychology focuses on what resources and processes can be mobilized for constructive social change. That is, from intergroup relations to civic engagement to political movements, this focus integrates social, developmental, and clinical psychology to address political questions.

Want to learn more about Political Psychology?

Queen's University Belfast has launched a new video describing our unique Masters degree in Political Psychology, the only one in the UK. Queen's has a longstanding international reputation for its social psychological research on political issues and is situated in Belfast, a city which has experienced one of the most protracted conflicts in the world. Following the peace process, Belfast is now in the process of fostering cohesion between divided communities. This context provides students with opportunities to apply their learning to real life political phenomena.

Through the Masters degree, students gain knowledge and skills for a career in public policy or employment in local or national government, international and European organisations, political parties, the media, and lobby groups. This program also serves as a foundation for a future PhD in Political or Social Psychology or another cognate discipline and subsequently pursue an academic career.

For students entering in fall 2016, there are 2 x £2,000 scholarships available! To be eligible, students (nationally and internationally), will have to apply, be accepted and enrolled onto a MSc programme this year. For more information about the program, scholarships, or to watch the video, please visit:
http://www.qub.ac.uk/schools/psy/StudyingAtTheSchool/PostgraduateTaught/PoliticalPsychology/

Internationalizing Undergraduate Psychology Education: Trends, Techniques, and Technologies

Harold Takooshian
Fordham University

Uwe P. Gielen
St. Francis College

Scott Plous
Wesleyan University

Grant J. Rich
Ashoka University

Richard S. Velayo
Pace University

How can we best internationalize undergraduate psychology education in the United States and elsewhere? This question is more timely than ever, for at least 2 reasons: Within the United States, educators and students seek greater contact with psychology programs abroad, and outside the United States, psychology is growing apace, with educators and students in other nations often looking to U.S. curricula and practices as models. In this article, we outline international developments in undergraduate psychology education both in the United States and abroad, and analyze the dramatic rise of online courses and Internet-based technologies from an instructional and international point of view. Building on the recommendations of the 2005 APA Working Group on Internationalizing the Undergraduate Psychology Curriculum, we then advance 14 recommendations on internationalizing undergraduate psychology education—for students, faculty, and institutions.

Keywords: undergraduate education, international psychology, teaching psychology, diversity, MOOC

> On U.S. college campuses, we psychologists should be teaching our undergraduates about human behavior, not just behavior in North America.
>
> —David G. Myers

Psychology is a highly popular subject of study for American undergraduates. Between 1.2 and 1.8 million U.S. students enroll in the introductory course each year (Gurung et al., 2016). More than 100,000 U.S. students earn their bachelor's degrees in psychology annually (Norcross et al., 2016)—114,450 degrees in 2013 (National Center for Education Statistics, 2015).

It is, however, less well known that in recent decades, psychology has been expanding apace in many corners of the world, making undergraduate education in psychology hugely popular around the globe (McCarthy, Dickson, Cranney, Trapp, & Karandashev, 2012). American psychologists now account for only an estimated 21% to 24% of the world's psychologists (Bullock, 2012a; Zoma & Gielen, 2015), down sharply from an estimated 80% in the 1980s (Rosenzweig, 1984). Increasingly, the educational practices and knowledge base of psychology are constructed on a worldwide basis, yet current American psychology curricula insufficiently reflect this trend.

This article describes how international and cross-cultural contributions can be purposefully integrated into undergraduate psychology education so that undergraduates both in the United States and elsewhere are better prepared for an

Editor's note. This article is one of a collection of four articles published with undergraduate education guidelines in a special issue of *American Psychologist*, "Undergraduate Education in Psychology: Current Status and Future Directions" (February–March 2016). John C. Norcross and Robin Hailstorks provided scholarly lead for the special issue.

Authors' note. Harold Takooshian, Department of Psychology, Fordham University; Uwe P. Gielen, Department of Psychology, St. Francis College; Scott Plous, Department of Psychology, Wesleyan University; Grant J. Rich, Department of Psychology, Ashoka University; Richard S. Velayo, Department of Psychology, Pace University.

The five authors contributed equally to this article. The authors thank several colleagues for their kind cooperation: Sarah Brookhart, Merry Bullock, Shane R. Jimerson, Robin Hailstorks, Tim Kasser, David G. Myers, John C. Norcross, Thomas D. Oakland, Jerry Rudmann, Andreina Parisi-Amon, Ann D. Watts, Gary VandenBos, Maryam Zoma, and three anonymous reviewers.

Harold Takooshian

increasingly interdependent world. In addition, this article describes how a modern psychology curriculum can enable students to gain international experience by facilitating their interactions with overseas students and faculty either in person or via electronic means, such as online courses and Internet-based technologies. The Internationalization of Curricula (IoC) is a movement affecting many fields (Leask, 2015), and is especially valuable for undergraduate psychology in more than one way, to increase (a) our understanding of human behavior in general, across diverse nations and cultures; and, (b) the "world-consciousness" of all psychology students in the United States and elsewhere—to nurture what has been termed "global psychological literacy" (Cranney & Dunn, 2011; Dunn, 2015).

In the following, we provide a brief history of the international growth of psychology, followed by how these international developments and new forms of diversity relate to undergraduate psychology education. Because the recent dramatic growth of international education is driven to a significant degree by technological changes, we address massive open online courses (MOOCs) and the pervasive influence of Internet-based technologies on students and faculty. These sections are followed by a set of 14 recommendations outlining how undergraduate psychology education might best be internationalized on three levels—by undergraduate students, their faculty, and institutions.

The Growth of Psychology as an International Discipline

Psychology as a discipline with a firm, institutional identity was born in the 1870s in Germany, spread to other European countries and the United States within the next few years, and soon thereafter also became known in some Asian and Latin American countries, such as Japan, China, Mexico, and India (Stevens & Wedding, 2004). Thus, Western-style psychology had an international dimension from its beginnings, but it would grow into a full-blown global discipline in the late 20th and early 21st centuries (Rich & Gielen, 2015).

After Wilhelm Wundt established the first psychological institute in Leipzig in 1879, his highly popular lectures and his laboratory soon attracted students from numerous Western as well as several non-Western countries. Many of these international students accepted his vision of a new, scientific discipline and returned home to establish laboratories and institutes in their own countries. By 1897, Wundt's laboratory expanded to 14 rooms, filled with students from 20 nations—from Japan to Chile (Misiak & Sexton, 1966).

Wundt had many American students and assistants, such as James McKeen Cattell. Although most of them rejected or ignored Wundt's theoretical outlook, they nevertheless formed an important part of the founding generation that would soon, together with William James and others, help American psychology assume worldwide leadership. By 1900, there were 40 doctoral programs and 41 laboratories at American universities, whereas only 10 laboratories could be found in Europe (Benjamin, 2000). Moreover, psychology was rapidly becoming one of the most popular subjects at the undergraduate level, while intriguing the general public (Schultz & Schultz, 2012).

In addition, during the 1930s and 1940s, many elite Austrian and German psychologists migrated to the United States. After 1945, American psychology began to dominate the worldwide scene not only based on its sheer number of psychologists but also through its journals, scientific research, textbooks, the growing dominance of English in scientific publications, and the country's economic and political power. There were now more psychological scientists, practitioners, and educators in the United States than in all other nations combined—to the point where some began to fault American psychology as being "self-absorbed" (Rosenzweig, 1984) or even "xenophobic" (Sexton & Misiak, 1984). These American critics argued that American psychology was assuming a monocultural and monolingual character while ignoring many new developments, especially in the non-English-speaking countries.

But this trend has changed dramatically since the 1990s, as psychology now grows faster outside than inside North America (Bullock, 2012a, 2012b), and colleagues inside and outside the United States seek greater communication. By integrating data from diverse sources (e.g., Bullock, 2013; Cooper, 2014; Lunt, Peiró, Poortinga, & Roe, 2015; Stevens & Gielen, 2007; Stevens & Wedding, 2004), one may estimate conservatively that there are 1 million psychologists worldwide: roughly 230,000 in the United States,

330,000 in Latin America, 330,000 in Europe, and 100,000 in the rest of the world (Zoma & Gielen, 2015).

International Diversity in U.S. Psychology Education

Although discussions about *diversity* are now frequently included in U.S. psychology courses, this was not always the case. Through most of the 20th century, the classic psychology experiments that American instructors present to their undergraduates—such as Solomon Asch's (1955) study on conformity and Philip Zimbardo's (1972) study of prisoners—were based on small samples that were intentionally homogeneous: White male U.S. college students. This control for gender, age, and race was an easy way to reduce confounding variables, tacitly leaving it to other researchers to cross-validate how much these findings on White male students might generalize to the other 99.9% of humanity—women, nonstudents, other ages, ethnicities, or nations. As late as 1986, an analysis of U.S. social psychology journals found that 72% of articles used North American undergraduates as subjects (Sears, 1986), and it concluded that this narrow database was giving our undergraduates a distorted picture of human nature. One psychologist wryly noted that in psychology experiments, "Even the rat was white" (Guthrie, 1998).

The 1991 Saint Mary's conference on the undergraduate curriculum noted the importance of diversity to "ensure that psychology courses more accurately reflect the diversity of humankind, including ethnic, social, cultural, and gender diversity" (McGovern, 1993, p. 179), as well as greater inclusion of underrepresented minority students and faculty in the psychology pipeline. Then in 2008, the inclusion of "sociocultural diversity" in the undergraduate curriculum became a major emphasis through the Puget Sound conference (Landrum et al., 2010), including the promotion of "psychological literacy" among citizens worldwide (Halpern, 2010). In fact, the American Psychological Association's (APA's) Board of Educational Affairs "noted that diversity is a particularly important aspect of the *Guidelines*" (Hailstorks & Boenau, 2013), and the revised *APA Guidelines for the Undergraduate Psychology Major 2.0* (APA, 2016) feature "Ethical and Social Responsibility in a Diverse World" as the third of its five broad learning goals. The "sociocultural diversity" in these *Guidelines 2.0* includes both multicultural diversity within the United States as well as international diversity across nations—which is the central focus of this article.

APA has a long history of promoting international psychology education, even before the formation of its Committee on International Relations in Psychology in 1944 (Fowler, 2000). The APA Office of International Affairs, formed in 1971, offers a website rich with global resources, travel funding, and a bimonthly bulletin (*Psychology International*). In 2008, the APA Education Leadership Conference focused its annual meeting on this theme of internationalizing psychology education (Torney-Purta, 2008), on the heels of an APA Working Group on Internationalizing the Undergraduate Psychology Curriculum (2005).

Because the question of educational "outcomes" is important, the 2005 APA Working Group identified five valuable goals of IoC in psychology, each with five measurable outcomes. Examples of these 25 outcomes include an increase in students' sociocultural awareness (Outcome 1.1); understanding of research methods applied across cultures (Outcome 2.3); knowledge of the field of psychology in other nations (Outcome 3.2); cross-cultural competence of students on a personal level (Outcome 4.4); and appreciation of global issues of human rights and social justice (Outcome 5.4). These 25 outcomes are not yet documented, but are best seen as an agenda for future researchers, to assess the actual impact of IoC on students' knowledge, attitudes, and actions.

Of course, U.S. undergraduate psychology courses should be relevant to the 95% of the human population living outside the United States, but creating such a cross-national science of behavior has been a challenge (Rosenzweig, 1984). Unlike physical sciences such as chemistry, which share a "periodic table" across nations, psychology lacks a solid core that is recognized cross-nationally (Howell, Collisson, & King, 2014).

To borrow from the concepts of Newtonian physics, we can see the challenge of a transnational psychology as a tension between two opposing forces. These are (a) the strong "centrifugal" (outward) forces that divide cross-national psychology and include the familiar obstacles of language, distance, cost, sociocultural variations, and ide-

Scott Plous

ology (Draguns, 2001); and (b) the strong "centripetal" (inward) forces that increasingly bind cross-national psychology: quadrennial and other world congresses, journals, cross-national educational and research efforts (such as Fulbright scholarships and study abroad), and now the Internet.

The Growth of Psychology Education Outside the United States

Since the 1990s, the numbers of psychologists, psychology programs, and course enrollments have increased rapidly around the globe. In 2012, over 4 million tertiary-level students were studying psychology and other subjects outside their own nation, up from 2 million in 2000 (UNESCO Institute for Statistics, 2014). And in the academic year 2013–2014, 886,052 international students were enrolled in U.S. institutions of higher education (4.2% of all students)—up 72% from 1999–2000 (Institute of International Education, 2014). Moreover, 289,408 U.S. students were studying overseas in the 2012–2013 academic year.

A growing number of international conferences, publications, and other resources support instructors who seek to internationalize their undergraduate courses. For instance, *Psychology Resources Around the World*, a web-based compendium of psychology in nearly every nation in the world, has been developed by the International Union of Psychology Science (IUPsyS: Bullock, 2012b). McCarthy and colleagues have produced three volumes of an edited series, *Teaching Psychology Around the World* (McCarthy et al. 2007, 2009, 2012), describing both education requirements and best practices in many nations. Six International Conferences on Psychology Education have been held since the first one in Russia in 2002. Psi Chi, the once-U.S. Honor Society for Psychology, voted in 2009 to expand into the International Honor Society for Psychology, and formed chapters in 10 nations within 5 years (McCormick et al., 2014).

Psychology education is flourishing in Western and non-Western countries alike. One clear example is Indonesia—the world's fourth most populous nation, with 252 million inhabitants. For decades, psychology was largely unknown among Indonesia's general public, until its first psychology department was founded in 1960 at the University of Indonesia. Yet by 2011, Indonesian students could study psychology in 95 departments across the country, and Indonesian psychologists appear so often on national TV and radio, and in newspapers and popular magazines, that the "psychological literacy" of the Indonesian public may now surpass that of the American public (Sarwono, 2011).

In some nations (such as Argentina, Brazil, Indonesia, Israel, and the Netherlands), psychology is taught to large numbers of psychology "undergraduates," and it has also entered the popular culture. In other countries (such as Cameroon, Mexico, Philippines, South Korea, and Taiwan), efforts are underway to "indigenize" psychology theories and research to reflect a region's unique cultural, social, and linguistic traditions. Many scholars in these non-Western countries believe that psychology education must be indigenized so that undergraduates can better understand psychology's relevance to their own lives. Some members of this movement aim to create a unified global psychology that can integrate diverse cultures and contributions from psychologists across many nations, whereas others emphasize the cultural embeddedness of almost all psychological processes (Kim, Yang, & Hwang, 2006).

It is valuable for U.S. and other psychology students to learn about these struggles to create both locally meaningful and globally unifying forms of psychological science. After all, many of these struggles revolve around the central psychological question of whether there is a universal human nature—and whether Western psychology has been successful in identifying most of its essential aspects, or whether it has been (partially) led astray by implicit but powerful cultural perceptions and norms (as described in www.indigenouspsych.org/). In international circles, some scholars have described North Americans as demographically "WEIRD"—White, Educated, Industrious, Rich, Democratic (Henrich, Heine, & Norenzayan, 2010), and thus not representative of populations in "ROW" (the Rest of World).

Although psychology has been growing rapidly outside the United States, the definitions and credentialing practices associated with the term "psychologist" vary considerably between nations. As a consequence, we lack sound global data comparable with the United States. The American system draws a clear distinction between undergraduate and

Grant J. Rich

graduate education based on the structure of the American university and college system. Most American 4-year college students pursue a liberal arts education in which required courses for their major occupy no more than 20% to 30% of coursework. The baccalaureate degree is prerequisite for future graduate education. In contrast, most psychology students in South America do (or did) not "major" in psychology. Instead, upon graduation from a selective high school, they enter a university to pursue a professional degree for about five years, and graduate with a professional bachelor's degree in psychology that, together with a period of supervised practice, allows them to practice psychology. (This degree is more comparable with a U.S. master's degree.) However, only a small fraction of these licensed psychologists will later pursue a master's or doctoral degree (Klappenbach, 2004).

In Europe, undergraduate education has been changing dramatically since the 1990s under the so-called Bologna process. Now, the 36 countries in the European Federation of Psychologists' Associations (EFPA) have been developing unified systems and standards for education and credentialing that are transforming psychology in Europe. In 2000, EFPA launched its "tuning" process to address the needs of students and employers for "transparent and reliable information as to what a degree qualification stands for in practice" (Lunt et al., 2015, p. 70). This process covers all education levels in Europe, including Levels 6 (baccalaureate), 7 (master's), and 8 (doctorate).

The EuroPsy Basic Certificate specifies outcomes for a 3-year program leading to a bachelor's degree, followed by a 2-year master's degree, and a 1-year period of supervised practice (Lunt, 2014; Lunt et al., 2015). At the same time, the EuroPsy initiative endeavors to protect "the rich diversity of European education . . . and in no way seeks to restrict the independence of academic and subject specialists or undermine local and national academic authority" (EuroPsy, 2011, p. 6). This effort is supported by 36 national psychology associations representing more than 300,000 psychologists who, in turn, serve more than 740 million people. Over time, this EuroPsy initiative may well shape undergraduate and graduate education in psychology outside Europe as well. This EuroPsy initiative moves European psychology education one step closer to the American educational model with its clear separation between undergraduate and graduate education. However, this movement has not been welcomed by everybody.

In addition to the EuroPsy efforts in Europe and the *APA Guidelines 2.0* (APA, 2016) in the United States, a third effort to enunciate a set of the goals for a diverse psychology education has been pursued by the International Baccalaureate Organization (IBO). Since 1960, the IBO is an independent multinational association that has developed international curricula and exams for 26 fields, including psychology. Like the U.S. Advanced Placement (AP) program, the IB Diploma gives motivated secondary school students, Ages 16 to 19, a chance to earn college-level credits. As of 2014, 1.1 million students at 3,789 schools in over 40 nations have studied for IB exams, including 17,200 IB exams in psychology (11,300 of these in the United States; IBO, 2009). So far, there appears to be little direct contact between leaders of these three independent efforts, though this may change with time, given their common goals to develop a solid undergraduate curriculum that also incorporates global diversity.

The role of new instructional technologies is especially relevant in supporting the goal of internationalizing psychology and other curricula. Just as new technologies in the 21st century are transforming higher education, one impact is to reduce these centrifugal barriers to internationalization—travel, cost, and language. By all accounts, technologies such as open online courses and Internet-based technologies will play a major role in the future of undergraduate education worldwide, including psychology.

MOOCs

One of the most notable developments in global education has been the rise of MOOCs, with important implications for undergraduate education and global psychological literacy. Although definitions vary, MOOC generally refers to a free or low-cost Internet-based course taken by a large number of people. These courses first garnered widespread media attention in the fall of 2011, when a Stanford University computer science professor enrolled more than 160,000 students in a MOOC on artificial intelligence, and 23,000 completed the course. A year later, an article in the

Richard S. Velayo

New York Times dubbed 2012 "the year of the MOOC," with good reason. By then, newly formed MOOC providers such as Udacity, edX, and Coursera had already enrolled millions of students, and the largest of these organizations, Coursera, reported growing at a rate faster than Facebook (Pappano, 2012).

The first MOOCs offered by Udacity, edX, and Coursera were in computer science, but today psychology-related MOOCs are among the most popular online courses, just as psychology courses have long been popular on college campuses. In fact, based on student registration figures that combine the first and second run of each course, four of Coursera's six most heavily enrolled MOOCs have focused on psychology, thinking, or behavior. These four Coursera courses include Social Psychology, with an initial enrollment of 633,131 students; Think Again: How to Reason and Argue (376,629 students); A Beginners Guide to Irrational Behavior (357, 511 students); and Learning How to Learn: Powerful Mental Tools to Help You Master Tough Subjects (321,617 students). Since 2012, MOOCs have also grown more international. For example, Coursera began exclusively with U.S. partner schools and instructors, yet nearly 40% of its 900 courses are now from partners outside the United States, and only 29% of its students are American.

Of course, distance learning—whether domestic or international—is not a new phenomenon. For most of the 20th century, correspondence courses taken through the mail were quite popular (Kett, 1996), and since 1990, The Teaching Company has offered more than 500 college-level Great Courses in a variety of audio and video formats. The video series *Discovering Psychology* has reached millions of PBS viewers since 1990, and has been taken as a tele-course for college credit by more than 500,000 students worldwide (Philip Zimbardo, personal communication, October 29, 2014). With the Internet, millions of online learners began watching educational videos and taking self-paced courses through KhanAcademy.com, lynda.com, and hundreds of other distance learning websites. It remains unclear what long-term impact this online explosion will have on traditional undergraduate psychology courses, but at the very least, MOOCs appear to be increasing psychological literacy worldwide.

What distinguishes MOOCs from other forms of online learning is that MOOCs usually take place with a large cohort of online learners from around the world. Typically, MOOCs include a combination of "courseware" (online course content) and elements of real-time traditional college courses, such as peer interaction, teaching assistants, and homework deadlines. Most often, MOOCs release course materials one week at a time, thereby allowing students in different time zones to learn about topics together as the course unfolds, help each other in online forums, and in some classes, assess one another's work.

Why this meteoric rise of MOOCs since 2012? The most obvious answer is that the technology has only recently become available—including global high-speed Internet access, bandwidth to stream videos, cloud storage of data, and the ability to create interactive online lectures that require students to answer questions before the video will advance. Yet technology is only part of the answer; MOOCs also provide a variety of economic and pedagogical benefits over traditional forms of education, particularly when it comes to internationalization.

The Benefits of MOOCs

On a per student basis and compared with traditional undergraduate courses, MOOC technology "can be used to enhance productivity in higher education by reducing costs without compromising student outcomes" (Griffiths, Chingos, Mulhern, & Spies, 2014, p. 4). Given the soaring costs of higher education in many countries, including the United States, it will become increasingly difficult for universities to ignore the economy of scale of these MOOCs.

MOOCs also offer benefits from the perspective of students. Not only are the courses less expensive and more accessible than most traditional classes, but for low-income students or people who live in a low-income nation, MOOCs may represent the only affordable opportunity for higher education. (In 2014, nearly half of all students in Coursera's Social Psychology MOOC were in countries with an emerging economy.) Since MOOCs are accessible around the clock, students can watch the lectures and receive online help from fellow classmates at any hour—a key advantage for students who are single parents, full-time workers, or homebound because of disability or illness.

For international students not fluent in the instructor's language, MOOCs offer several other advantages over traditional instruction. First, videotaped lectures can be watched with subtitles, often in the student's native language. Second, students taking a MOOC can replay the lectures as many times as they like. Third, MOOC lectures usually have an option that allows students to slow down the video when needed. And fourth, students can use the class forums to study and help one another in their native language.

Indeed, because the students who enroll in MOOCs come from so many countries, the need for language support is even greater than in traditional classroom settings. In the Coursera Social Psychology MOOC, students came from more than 200 countries, spoke more than 40 different primary languages, and listed a primary language other than English nearly half of the time. To meet the needs of these students, lecture subtitles were available in 27 languages, thanks to volunteer translators who donated their services. On average, according to Coursera, the enrollment of students who speak a non-English primary language triples when a MOOC offers subtitling in their language (Andreina Parisi-Amon, personal communication, November 1, 2014).

These enrollment patterns highlight the central role of language in international psychology education, and they suggest the importance of incorporating pedagogical practices that meet the linguistic and cultural needs of students. Whether courses are online or on campus, internationalizing psychology education will require platforms that facilitate peer interaction, language support such as video subtitling, visual and nonverbal demonstrations of key principles, and the inclusion of diverse cross-cultural examples that engage students regardless of nationality. Such practices are consistent with recent research on effective undergraduate education in psychology (Halpern, 2010), and their adoption stands to benefit not only students abroad but international and domestic students studying in the United States as well.

Learning Outcomes

Critics of MOOCs note that course completion rates are very low, and that it is hard to assess the learning that takes place. Of the estimated 33,000 to 43,000 students who enroll in an average-size MOOC, only 60% or so of students return to the course when it begins, and only 6% to 10% complete the course, depending on how the completion rate is defined (Jordan, 2014)—making a 90% to 94% incompletion rate a source of concern for educators. In response to these criticisms, MOOC supporters argue that course completion rates are the wrong metric to measure educational success. In the words of the founders of Coursera, "the goal of education is to provide students with the skills they need to achieve their own life goals, not to retain individuals in a classroom" (Koller, Ng, Do, & Chen, 2013, p. 1).

Outcome studies comparing online and traditional learning have shown promising results. For instance, one study found that when an electrical engineering course incorporated content from an edX Circuits and Electronics MOOC, the percentage of students passing the course went from as little as 55% to 91% (Fowler, 2013). An especially encouraging result was reported by University of Texas researchers who compared the effectiveness of an online version of introductory psychology with a traditional version (Pennebaker, Gosling, & Ferrell, 2013). Not only did psychology exam scores increase by approximately half a letter grade when the course was taught online—the socioeconomic achievement gap in course grades was cut in half.

How effective are MOOCs or other new technologies in internationalizing undergraduate education in developing regions? Current opinions are divided. On the positive side, educators such as David Myers (2009) foresee how new technologies can segue into a "pedagogical utopia," in which "web-based e-books may deliver state-of-the-art, interactive, low-cost, locally adapted content to students who cannot afford books" (p. 99). On the negative side, Kentaro Toyama (2015), from his experience with undergraduates in India, concluded that "the primary effect of free online courses is to further educate an already well-educated group who will pull away from less-educated others. The educational rich just get richer." The long-term impact of MOOCs is clearly an open question awaiting empirical study.

Internet-Based Technologies

In addition to MOOCs, various Internet-based technologies and systems—such as Twitter, Facebook, blogs, wikis, Skype, videoconferencing, podcasts, YouTube, and virtual worlds—are revolutionizing how disciplines internationalize their undergraduate programs and curricula (Velayo, 2010; Velayo & Trush, 2012). Through such web-based systems, instructors in different nations can work together, often in real time, on joint activities. Undergraduates are generally well-acquainted with these sites and technologies (at times, more so than faculty), and their thoughtful use is valuable in guiding education, supplementing lessons, improving research and collaboration, and pursuing the larger goal of IoC (Velayo, Oliva, & Blank, 2008). Moreover, Moodle, Blackboard and other online teaching platforms can facilitate a web-enhanced class, which enables students from different institutions across the world to interact in real time. Such technology is now commonplace in most schools in the United States and other nations.

Internet-based technologies are increasingly popular to incorporate international content into the psychology curriculum (Grenwald, Oberlechner, & Velayo, 2012; Grenwald & Velayo, 2011; Velayo, 2012). One key reason is cost-effectiveness—especially for community college and other students with family, work, or financial limitations

This document is copyrighted by the American Psychological Association or one of its allied publishers.
This article is intended solely for the personal use of the individual user and is not to be disseminated broadly.
All rights, including for text and data mining, AI training, and similar technologies, are reserved.

(Guerin, 2009). The Internet offers interaction with people from other cultures and countries, journal articles written by individuals from diverse backgrounds, and countless opportunities for cross-cultural collaboration—all at little cost.

Social media refer to Internet-based technologies that enable users to interact by sharing information, ideas, images, or videos. Facebook, YouTube, Twitter, blogs, and wikis are among the most common social media platforms used to enhance collaboration and share knowledge among learners from different parts of world. Social media exemplars in internationalizing undergraduate education include virtual psychology labs (e.g., Gao & Wang, 2010), international mentoring (Stevens & Wedding, 2009), and collaborative online research with participants across nations. One example of a popular virtual lab is APA's Online Psychology Laboratory (http://apaonlineacademy.bizvision.com/), with almost a million views per year.

Another way that Internet-based technologies incorporate international content is through the sharing of materials. It is increasingly easy to share material with peers or colleagues and work collaboratively. Many instructors now use social networks and videoconferencing to participate in lecture exchanges (e.g., Longview Foundation for Education in World Affairs and International Understanding; www.longviewfdn.org). Internet-based technologies can also help supplement textbooks which may lack international content, with articles from international journals to supplement the texts.

There are also many content-based resources that provide information for undergraduate instructors who wish to infuse international content in their courses (Velayo, Grenwald, & Manfred, 2012). Probably the most comprehensive collection of psychology resources focused specifically on internationalization are Psychology Resources Around the World (http://resources.iupsys.net/iupsys/index.php/patw-resources) and International Teaching of Psychology Network (http://interteachpsy.org/). Instructors can help update these and other sites by contributing resources as well as reviewing the materials. Just as emerging technologies are transforming undergraduate education in general, these technologies promise to be a valuable centripetal force to reduce barriers to global education.

14 Recommendations to Support the Internationalization of Undergraduate Psychology

Internationalizing undergraduate psychology is an ambitious but highly desirable goal that needs the concerted efforts of students, faculty, departments, and educational institutions. Institutions must help create the right educational atmosphere as well as provide the necessary organizational support and financial incentives to enable faculty and departments to engage in the necessary efforts. Departments must see internationalization as an overarching goal that cuts across the curriculum. Faculty members must see themselves as eager learners who consider the internationalization of their own courses and research efforts a challenging but rewarding task. Finally, although students may at first be reluctant to leave their comfort zone to gain international experience, once they do they can expect to grow intellectually, emotionally, socially, and perhaps spiritually. Some of them will find their life's calling precisely by seeing themselves in new and surprising situations, whereas others will see their career options enlarged in a world shaped by the forces of globalization.

How timely, then, that the *APA Guidelines 2.0's* (APA, 2013) third goal of "Ethical and social responsibility in a diverse world" can help guide individual faculty, students, and educational institutions to develop an international outlook and acquire the necessary skills to cross cultural borders. To make this broad goal more specific, we offer 14 suggestions that address three levels—undergraduate students, faculty, and institutions.

Undergraduate Students

1. Cross-national research. Because most undergraduate curricula mandate a research experience, why not a cross-national one? A student guide (Shvets, 2007) offered six reasons for students to collaborate in cross-national research and four low-cost ways to do so. For one example, without funding, a researcher completed an extensive field experiment on prosocial behavior, comparing 36 U.S. cities and 23 nations, by training student tourists who valued this chance to get research experience (Levine, 2003).

2. Study/work abroad. The numerous U.S. students studying abroad do so typically for one summer, semester, or full year, through one of the increasing number of study abroad programs (Soto, 2014). In addition, "work abroad" programs (such as teaching English) offer income along with cultural immersion (Murray, 2005). Such study abroad programs offer ideal opportunities to conduct cross-national research and to create personal contacts for future collaborative research projects.

3. Conferences. One simple yet valuable international experience is for undergraduates to attend one of the many global psychology or education conference each year, most of which offer a reduced fee for students. Moreover, many conferences now allow undergraduate and graduate students to present posters, thereby reinforcing the challenges and excitement to conduct and present cross-cultural research.

4. Organizations. Undergraduates can benefit from joining an international organization as student members (Takooshian & Stambaugh, 2007)—be this a large group (such as the International Association of Applied Psychology or the International Association of Cross-Cultural Psychology) or one of the 100 smaller specialty groups, such as forensic or school psychology (Bullock, 2012a).

This document is copyrighted by the American Psychological Association or one of its allied publishers.
This article is intended solely for the personal use of the individual user and is not to be disseminated broadly.
All rights, including for text and data mining, AI training, and similar technologies, are reserved.

5. Funding. There are at least 50 major sources of funding for student and faculty international activities—such as Boren, Coro, and Open Society. In fact, one analysis found that "funding for international activities has risen sharply since the 1990s, now accounting for 15% of all foundation-grant dollars . . . as more U.S. foundations are 'going global,' up from 46% in 1994 to 63% in 2001" (Takooshian & Takooshian, 2012, p. 54). Students frequently report profound experiences after completing a Fulbright or similar program (Zoma et al., 2012).

6. Internships. Whether for credit or not, students can seek multicultural field placements as part of their undergraduate degree. Most cities have multicultural service centers that can offer a psychology placement, such as Los Angeles' Institute for Multicultural Education and Services. In New York City, the United Nations offers an increasing number of internships (Takooshian & Campano, 2008), participation in Model U.N. sessions, and other international experiences for undergraduates (Roberts, 2014). Many internships provide students with the opportunity to interact with children and/or adults of numerous immigrant backgrounds that can prepare them for subsequent international experiences.

Faculty

The revised version of the *APA Guidelines 2.0* (APA, 2016) seeks to infuse "sociocultural learning outcomes" across the major, rather than in a separate course to produce "global psychological literacy" (Cranney & Dunn, 2011). Individual faculty can do much to adapt their existing courses, develop new ones, experiment with new technologies in the classroom, and participate in cocurricular activities outside the classroom (Velayo, 2016).

7. Syllabi. Faculty may integrate into their current courses more research based on non-U.S. participants or by non-U.S. authors (Woolf, Hulsizer, & McCarthy, 2002). One volume offers a dozen practical chapters on how to integrate cross-cultural work into traditional courses such as developmental, social, personality, and health psychology, as well as 52 ways to internationalize the psychology curriculum (Leong, Pickren, Leach, & Marsella, 2012). An increasing number of cross-cultural textbooks are appearing for teachers of these courses (e.g., Gielen & Roopnarine, 2016). One offers "111 experiences for multicultural learning" inside the classroom (Pedersen, 2004).

8. Courses. Some faculty might develop a new course, using one of the many textbooks available for international (Eysenck, 2004) and cross-cultural psychology (Shiraev & Levy, 2012). The APA Society for Teaching of Psychology offers a variety of model syllabi in its Project Syllabus. Faculty can tap the IUPsyS resource center (cf. Stevens & Wedding, 2006), the nine volumes on international psychology (in Baker, 2012), or any of a dozen cross-cultural psychology periodicals, such as the *International Journal of Psychology* or the *Journal of Cross-Cultural Psychology* (Simonian, 2014).

9. Remote courses. In addition to MOOCs and other online and other distance-learning courses (Velayo, 2011), faculty may now use Skype, Polycom, or similar technologies to offer simultaneous cross-national courses (Chia & Poe, 2004).

10. Cocurricular activities. Over 1,300 U.S. undergraduate institutions have a chapter of Psi Chi or Psi Beta (for community colleges), which commonly offer cocurricular activities that complement classroom learning (McCormick et al., 2014). These include international activities such as lectures or workshops by international travelers, programs focused on global topics, and using Skype to hold shared sessions between American and overseas chapters of Psi Chi.

Departments and Institutions

11. Institutes for international and cross-cultural psychology. An institute focused on global psychology can broaden the curricular offerings of psychology programs, involve undergraduate students in international research and other internationally oriented activities, and broaden their horizons. An example of such a center at a predominantly undergraduate institution is the Institute for International and Cross-Cultural Psychology at St. Francis College, New York (www.iiccp.org).

12. International activities on campus. In order to promote international activities on campus, a school may foster creative collaborations among existing campus groups: the psychology department, offices for international students and study abroad (Roberts, 2014), and the Psi Beta or Psi Chi chapter (Russo & Takooshian, 2002). Such activities might include lecture series, interdisciplinary workshops for students, receptions, awards, faculty development workshops, or press releases highlighting global work.

13. Fulbrights and faculty abroad. Schools would do well to encourage and support faculty who consider applying for Fulbrights to do research or teach overseas. Since 1946, over 110,000 faculty have served as U.S. Fulbright Scholars overseas, often with life-changing experiences (Takooshian et al., 2011). In addition, over 183,000 international faculty members have served in the United States. There are a growing number of overseas programs besides Fulbright. Over 1 million "alumni" and "alumnae" have been funded by one of the dozens of other U.S. State Department programs—such as the Humphrey, Gilman, and UGRAD programs (Barton, 2013). Over 7,500 psychologists have directly benefitted from one of these programs (Takooshian, 2013).

14. Administrative support. Ask deans, directors, provosts, and other administrators to support programs and events that internationalize psychology education. When feasible, familiarize administrators can also familiarize themselves with resources to internationalize the school's curricula (IoC, in Leask, 2015), or Internationalize at Home (in Barker & Mak, 2013). Because educational institutions are frequently under pressure to internationalize their offerings, administrators may be willing to provide organizational, financial, and moral support for this effort.

Concluding Comments

Contemporary undergraduate psychology education in the United States is being powerfully affected by at least two forces: the sharp growth of psychology outside its borders and the emergence of new technologies in the classroom. Separate but parallel efforts are underway—*APA Guidelines 2.0* (APA, 2016) in the United States, and the EuroPsy "tuning process" in Europe—to encourage greater cultural diversity in undergraduate education, as psychologists around the world seek to develop educational practices that reflect a cross-national science of behavior. These efforts are supported by the sustained commitment of APA to further the goals of internationalization, and the dedicated efforts of faculty members and other psychologists both in the United States and abroad, to get their psychology undergraduates ready for the future.

What will this future look like, and how can we best prepare our students for it? *APA Guidelines 2.0* (APA, 2016) emphasizes that our undergraduates today are entering an ever more diverse and multicultural world. As noted by the past CEO of APA, Raymond Fowler (2000, p. 11), "new psychologists who do not have the benefit of a sophisticated orientation to international issues will be severely handicapped in their career options." Psychology undergraduates must develop *global psychological literacy*—to think in broad international terms, communicate across cultural borders, integrate multiple identities in themselves, and support others in their efforts to achieve goals that are in part culturally shaped. Our recommendations are intended to help psychology undergraduates and faculty to prepare for a "glocal" world—that is, a world that is simultaneously global and local in nature.

INTERNATIONAL UNDERSTANDING

an ICP, Inc. publication

Part B: International Psychologist IP 55.4 Edition

Dr. Ann Marie O'Roark, Editor

January 17,2016. St. Augustine, Florida USA. Themes in the IU55.4 move from innovative interdisciplinary client services to activities that highlight the value priorities of the International Council of Psychologists, Inc., and conclude with attention to the association's constitution, the articulation of its *raison d être*.

Providing Interdisciplinary Client Services: Using Assessment to Testify in Forensic Community Matters

Information from **Dr Tara Pir**, ICP, Inc. Past President, describes innovative approaches to education and counseling services offered at the Institute For Multicultural Counseling and Education Services, Inc. (IMCES). She and members of her multidisciplinary staff, **Marc Borkheim**, PhD, **George Gharibian**, PhD and **Ardalan Zamani,** Esq., presented papers on several of their studies during the 2015 annual conference. In *"Breaking the Cycle of Recidivism Among the Mentally Ill Population,"* Dr. Pir discusses the purpose of IMCES research work which is designed to stop recidivism among people with mental illness. IMCES is one of the first psychological firms to design services that actively include attorneys on multidisciplinary teams offering health, mental health, as well as social services to clients, and this time including legal advocacy.

Editor's Summary	Page 1
PAPERS and ARTICLES	Page 3
Leadership Contact Information	Page 37
INDEX	Page 39

Dr. Ludwig Lowenstein, former ICP Inc. president [2011-13] and an independent practitioner in England, is a faithful contributor to the **IU**, a semi-journal section of the International Council of Psychologists, Inc., newsletter, **IP**. In *"Value of Psychological Testing in Forensic Cases Before the Courts,"* Lowenstein describes his special services to clients who face legal and courtroom challenges. He conducts psychological assessments of parties involved in legal actions for barristers and judges' decision making.

Highlighting ICP, Inc.'s Core Values: Wellbeing and Women's Challenges

Dr. Chok Hiew, ICP, Inc. President 2007-08**,** describes his rehabilitation work with the elderly and victims of natural disasters. He has promoted work merging eastern and western healing knowledge and application. Co-Author of books on qigong, the ancient Chinese healing method, he recently developed his own research backed methods and techniques. **Dr. Jennifer Boyce**, Toronto licensed psychologist, is in the early phase of a newly launched private practice providing well being and stress reduction services to individual clients. The section concludes with an excerpt from **Dr. Jan Yoder's** Denmark-Gunwald Award address. She was awarded ICP, Inc.'s feminist research and service award for her long term work as a feminist educator and researcher and raising visibility for issues related to social justice for women. She recently moved from the University of Akron to Kent State University.

Advancing Psychology: Comparison of Applied Services in two countries; Applying Innovative Methods

Two articles by ICP, Inc. members, both participants in an research interest group headed by Dr. Frances Culbertson that made cross cultural comparisons of stressors of professional women, present articles on "consulting psychology" as an important competency for all psychologists and as a rapidly expanding area of service.

Continued next page

[Con't from page 1]

Dr. A. M. O'Roark traces the shifting focus and priorities of consulting and consultation during 100 years of efforts by the American Psychological Association to establish "who can call themselves a consulting psychologist?"

Dr. Machiko Fukuhara, President Elect of ICP, Inc., and chair of the 2016 annual conference, provides a cross cultural counterpoint review of the evolution and status of "consulting to organizations" in Japan. Only recently have psychologists been involved in organizational consulting, previously included by financial and business specialists. Consulting is an interdisciplinary activity slowly gaining in visibility. polarizing cultural views cloud current purpose and functionings as a 501c3 incorporation and unified, collaborative group. A committee was appointed during the Toronto 2015 Board meetings to work on collating and refining the scattered and usually ignored agreements included in the Board Rules [administrative procedures and policies. The scientific methodology of approaching the current disarray and centrifugal-centralpedal currents in the group would be to collect all recent minutes where Board adjustments to Rules are recorded and results of membership votes on any changes in the Bylaws by the Board secretary. The Secretary's reports are published in the newsletter. The 2015-16 Bylaws and Rules Committee includes: Dr. Robert Silverberg, chair; and three members – Dr. Florence Denmark, Dr. Tara Pir and Dr. Ann Marie O'Roark. Dr. Pir presented the technical version of bylaws adjustments to the Board in Toronto. Her material is presented here. Dr. Silverberg is preparing a review and message that will include beginning the refinement of bylaws by reviewing philosophical foundations behind governance documents.

A Poem; A Fictional Interview; A Letter from the Past

One colleague said that 2016 feels like a "spooky" year. Perhaps with the reality horror film, *The Revenant*, winning so many Hollywood awards in the cinema arena, the spooky part of 2016 is out of the way and less brutal flights of fantasy and recollections can fill the rest of the new year with more optimism, humor and fresh ideas for meaningful engagement with environments and revengeful social entities. This group of writings illustrates creative flairs of ICP members.

Dr. Ani Kalayjian, former ICP, Inc. Treasurer**,** shares a poem from her ever hopeful and caring heart. **Dr. David Y.F. Ho,** President of ICP, Inc. 1989, writes a dialogue between his two "selves": David and Y.F. He recalls intercultural exchanges during some of his many travels around the globe. The varied incidents of misunderstandings might be a little hard to follow at times [they are taken from a larger work of fiction Dr. Ho published recently] but his genuineness is unmistakable. His effort to poke fun at himself illustrates mid-depth cultural faux pas. **Dr. Bruce Bain's** letter is a relic from the time he was ICP Inc. president, 1998, some ten years after Dr. Ho's term. Dr. Bain writes about his travels during his presidency and, ever the educator, gives us a glimpse into the work and "world" of ICP colleagues in far flung places.

Looking Forward

This section calls attention to ICP, Inc. Bylaws, the association constitution. It is the governance document that serves as the glue that prevents the ICP melting pot membership constituency from flying apart. Unfortunately, polarizing cultural views cloud current purpose and function as a 501c3 incorporation and unified, collaborative group. A committee was appointed during the Toronto 2015 Board meetings to work on collating and refining the scattered and usually ignored agreements included in the Board Rules [administrative procedures and policies]. The scientific methodology of approaching the current disarray and centrifugal-centripetal currents in the group would be to collect all recent minutes where Board adjustments to Rules are recorded and results of membership votes on any changes in the Bylaws by the Board secretary. The Secretary's reports are published in the newsletter.

The 2015-16 Bylaws and Rules Committee includes: Dr. Robert Silverberg, chair; and three members: Dr. Florence Denmark, Dr. Tara Pir and Dr. Ann Marie O'Roark. Dr. Pir presented the technical version of bylaws adjustments to the Board in Toronto. Her material is presented here. Dr. Silverberg is preparing a review and message that will include beginning the refinement of bylaws by reviewing philosophical foundations behind governance documents.

The issue closes with updates about the 2016 ICP, Inc. annual conference and board meetings in Yokohama, Japan, next July.

Appreciations / Citations

With appreciation, we list here the articles included in INTERNATIONAL UNDERSTANDING for 2014 and 2015. Manuscripts are sent to the Editor in APA publication format. A Review Panel considers the submissions in light of the stated mission and purpose of the association and the values endorsed in policies.

Breaking the Cycle of Recidivism Among the Mentally Ill Population

By Tara Pir, PhD

The focus of this article is the interconnectedness of public policy and psychology with the aim of developing a bridge of connectedness rather than isolation, helping to return individuals with mental illness from the criminal justice system back into mental health care. The special problem of recidivism among those with mental illness is well documented and studied. However, the proposed strategies and interventions to address this serious problem have focused on the period of time following imprisonment.

In order to address the special needs of this vulnerable and especially challenged population, I developed a comprehensive approach to stopping recidivism that includes the following components: (i) prevention and early intervention; (ii) multidisciplinary care teams including attorneys; and (iii) culturally and linguistically appropriate service provision, practicing the principle of inclusion.

History

In the decades since the Reagan administration closed community mental health clinics and the national mentally ill inmate population soared, the prevailing school of thought among mental health advocates was that medicating offenders upon their release from prison and connecting them with psychiatric services would ensure that they would never come into contact with the justice system again. (How To Break The Cycle Of Imprisonment For Mentally Ill American, Sam P.K. Collins, 2015.)

However, with recidivism rates among the mentally ill reaching more than 50 percent, some health experts are seeking another approach. They want to change the manner in which parole officers, judges, employers, and mental health care professionals help mentally ill ex-offenders reintegrate into their communities. (Collins, 2015.)

To get a sense of the extent of the problem of the incarceration of the mentally ill, consider that by the mid-1970s, studies in some states suggested that about 5% of jail inmates were seriously mentally ill. A study of five California county jails reported that 6.7% of the inmates were psychotic. A study of the Denver County Jail reported that 5% of prisoners had a "functional psychosis." Such figures contrast dramatically with studies from the 1930s that reported less than 2% of jail inmates as being seriously mentally ill. In 1973 the jail in Santa Clara County, which included San Jose, "created a special ward . . . to house just the individuals who have such a mental condition"; (Dr. E. Fuller Torrey, "Ronald Reagan's shameful legacy: Violence, the homeless, mental illness" Salon, 2013.)

Not only is there a tremendous human toll involved when mentally ill individuals are incarcerated rather than receive mental healthcare; but, from a public policy perspective, the state unwittingly ends up investing in recidivism rather than recovery. The price tag for housing, feeding and caring for a prisoner in California has climbed to almost $64,000 annually, up from $49,000 five years ago. Per prisoner, the state spends more than three times the amount it did 20 years ago when the population was a similar size. (Reuters US, Wed Jan 6, 2016, "California prison reforms have reduced inmate numbers, not costs" Robin Respaut.)

A well-known approach to addressing recidivism

Continued next page

Con't. from page 3

among this community is the establishment of Mental Health Courts. Mental health courts divert offenders with mental illness away from incarceration in return for their participation in monitored mental health treatment. Since their inception in the late 1990s, the proliferation of these problem-solving courts has outpaced the research on their effectiveness. (PsycINFO Database Record (c) 2015 APA.)

At the present time, mental health courts still represent an emerging practice, but have not yet reached the level of an evidence-based model. Existing studies of mental health courts suffer from methodological limitations, specifically, a lack of experimental design, use of non-representative samples, and assessment over short timeframes. Moreover, the inherently idiosyncratic nature of these courts and the variance in reporting of court-specific eligibility criteria make cross-article comparison more difficult. (PsycINFO Database Record (c) 2015 APA.)

Over the past decade, Mental Health Courts have spread rapidly across the United States. Research suggests that Mental Health Courts can be effective in reducing recidivism, but also demonstrates that their effectiveness varies as a function of characteristics of the participants (e.g., criminal history) and the program (e.g., coercion). Less is known regarding the extent to which process-related factors (e.g., length of participation, time between referral and receipt of services) impact effectiveness.

Overall, results provide some evidence supporting the effectiveness of Mental Health Courts. Participants had significantly fewer jail days, but not charges or convictions, relative to participants who were receiving treatment as usual (TAU). Among Mental Health Court participants, graduation from the Mental Health Court, presence of co-occurring substance use, and longer length of Mental Health Court participation were associated with greater reductions in jail days. Other process factors were unrelated to reductions in recidivism. Findings suggest that Mental Health Courts may be particularly effective for high-risk participants and that time spent in a Mental Health Court has positive effects on recidivism, regardless of graduation status. (PsycINFO Database Record (c) 2015 APA.)

Evidence-based practices (EBP) with track records of effectiveness in treating serious mental illness, co-occurring substance abuse, trauma, and motivational challenges have been utilized with some success in forensic populations (CMHS National GAINS Center, n.d.). However, recent reviews of offender-focused and jail diversion programs found that many EBPs, such as Assertive Community Treatment, may achieve symptom reduction but not decrease criminal recidivism. (Morrissey, 2007; Case, 2009; Skeem, 2009.) In fact, studies indicate that offenders with mental illness share diagnoses and treatment needs similar to those of individuals with mental illness who do not commit crimes. However, with reference to recurrent criminal behavior, offenders with mental illness share the same risk factors for offending as their non-mentally ill counterparts. (Reducing Criminal Recidivism for Justice-Involved Persons with Mental Illness**,** Rotter, Carr, 2013.)

Although connecting individuals with mental illness to appropriate and effective community care is clearly good in and of itself, the failure of traditional case management and clinical services to fully address criminal justice recidivism in the mentally ill offender population challenges providers to adopt and adapt best practices that may be ultimately more effective in decriminalizing persons with mental illness. These practices include Risk-Need-Responsivity (RNR)-based recidivism-focused assessment and clinically sensitive, mandated community case management, such as probation officers with specialized caseloads and mental health courts; criminal-thinking and behavior-focused structured clinical interventions; and an awareness of how to maximize the likelihood that an offender will take advantage of these interventions. Integrating these approaches with existing assessments and interventions for individuals with mental illness is also necessary and is beginning to receive attention in research, clinical, and policy forums. (Osher, 2012.)

The Need For Early Intervention

By incarcerating a mentally ill individual rather than providing them with appropriate mental health care, they are not able to learn new skills and behavior toward joining the workforce. Rather, the opposite takes place, with the individual acquiring the skills and behavior of a criminal, setting them further on the road to recidivism. The critical importance of timing and, specifically, the value of a program that precedes and precludes incarceration is demonstrated in a special Mental Health Diversion program begun in 2007 in the District of Columbia Superior Court.

One study tracked mentally ill defendants in the pro

Continued next page

Con't. from page 4

gram and compared their re-arrest record with mentally ill defendants who were not part of the program, which involves greater court supervision and the incentive of having criminal charges dismissed. (Tillman, 2013.) Mentally ill criminal defendants who completed the program were less likely to reoffend, compared with mentally ill defendants who went through traditional criminal proceedings, according to a recent study. (Zoe Tillman, 2013. blog of legal times, an ALM Publication.)

Following arrest, defendants on pretrial release are placed under the supervision of the Pretrial Services Agency, which tries to connect mentally ill defendants with treatment and other support. Since both groups in the study—those in the diversion program and those not—were getting the same access to mental health services through the agency, the study's authors said they were bet ter able to identify the effects of being in the diversion program. (Tillman, 2013)

The District has made some advancements in deterring mentally ill ex-offenders from prison. A 2013 study of the city's mental health courts found that those proceedings positively affected the life outcomes of defendants by dropping their charges and connecting them with mental health services. For mentally ill inmates entering the system for the first time, the D.C. Department of Corrections provides mental health screenings during the intake process and secures individual counseling and prescription medication if needed.

However, Tammy Seltzer, director of the University Legal Services D.C. Jail and Prison Advocacy Project, said that those services will not suffice for mentally ill offenders and ex-offenders who need more than medication to lead a normal life.

"Based on research, medication is the least likely indicator of whether someone will commit an offense. We know that people with a serious mental illness are more likely to have their probation revoked for minor, technical infractions. It shows that we are more afraid of what's going to happen if they don't show up their appointment. We're driven by fear and that continues the cycle." (Seltzer)

Although diversion programs such as this one in D.C. have resulted in some limited success, this model does not take into consideration the additional complication that cultural and linguistic differences introduce, which can compromise an individual's ability to understand the circumstances they are in and the ability to be heard. As Heathcote Wales, a professor at Georgetown University Law Center and one of the study's lead authors observed, "these folks have just not been treated like responsible human beings or people who are worth listening to."

Community clinics have unique advantages in their ability to address the challenge of recidivism among individuals with mental illness. In contrast with other responses to the problem of recidivism among persons with mental illness, the approach I propose incorporates a multidisciplinary approach, focuses on prevention and early intervention, and takes linguistic and cultural characteristics into consideration. Also, as part of the training that I provide on an ongoing basis to staff, interns, and clinicians at IMCES, we practice the principle of inclusion.

In addition to their clinical presenting problems, many of our clients already face cultural and linguistic challenges as well as a lack of knowledge of the legal system. The addition of legal challenges, which includes dealing with the judicial system, compounds their difficulties. Often invisible and overlooked during initial assessment, are the feelings of rage associated with being considered "undesirable" or "defective" as a person with mental health challenges in the eyes of the judicial system.

Research indicates that legal aid/advocacy services included as an integral part of a multidisciplinary intervention plan are virtually nonexistent. At IMCES, we conducted a study examining the improvements of overall client psychological health recovery goals during the course of mental health treatment, when legal aid is included. The study measured the comparative mental health improvement of these two groups. The result demonstrated our desired outcome of reaching recovery goals by the group that used the multidisciplinary care plan. We practically helped our clients break through the vicious cycle of recidivism.

Using Assessment to Testify in Forensic Community Matters

Value of Psychological Testing in Forensic Cases Before the Courts

Ludwig F. Lowenstein Ph.D.
Southern England
Psychological Services, UK

Abstract

This article considers the role of expert witnesses be they psychiatrists, psychologists and others in carrying out forensic reports for the courts. The courts require certain ethical and objective criteria being presented. This includes psychological testing of alleged criminal offenders and those suffering from neuropsychological injuries due to accidents. Personal injury is an area where there is often a considerable degree of malingering for obvious reasons, i.e. compensation payments etc. The role of the expert witness using such tests and measurements as well as interviews with adults and children are considered as is the potential for malingering using any psychological test that exists. Much more research is required to make certain that assessments carried out are indeed objective, accurate and valid.

Psychologists, more than anyone, rely heavily on objective and projective personality testing as well as the interview. It is an area in which psychologists, especially clinical and forensic psychologists, as well as educational psychologists, are trained. This work adds substance to what is provided in the court where frequently it is objective evidence which is required for the benefit of the court rather than opinions based on interviews or other matters. In what follows we will consider psychological assessments first followed by the role of the expert witness in carrying out forensic assessments and reports for the court. This will be followed by work that psychologists do regarding alleged criminality, neuropsychology, and personal injury cases. The information discussed will be based on recent research carried out worldwide.

Some specific areas will be covered including malingering, ADHD (attention deficit and hyperactive disorder) and work with children. We will begin with basic principles involved in the use of psychological testing in cases before the courts.

Basic principles

Buchanan (2013) reviews expert evidence providing psychological and psychiatric evidence in the court. He considers it a necessary requirement to act in the best interest of the person being assessed. This ultimately outweighs any duty of confidentiality to the instructing party. As pointed out by McAuliff (2009) judges depend on expert evidence from psychologists and others for the purpose of making the most appropriate decisions. Following such reports being provided to the court both psychologists and psychiatrists are sometimes asked to testify. According to Sadoff (2011) "*the proper role of the expert is to describe the relevant abilities, disabilities, symptoms and diagnostic conditions in clinical and behavioural terms, leaving to the court to weigh these observations in the context of legal concept and standards*".

Psychological testing in the reports that follow for the court

Much as possible empirical evidence needs to be provided by psychologists carrying out testing and providing psychological testimony in the court (Woody, 2013). The expert witness who will be discussed later, seeks to provide clinical and statistical predictions of future behaviour for the court. Some psychologists, more than others, follow the system of Achenbach & Rescorla (2013) of providing empirically based assessments (ASEBA). Actual scores are displayed in these reports relating to age, gender and other criteria.

A large number of tests are used but some of the more common ones are the MMPI-2 in criminal cases (Barber-Rioja et al., 2009). Of particular importance in criminal offence assessment is elevation of scores in criminal defendants in certain area such as the FC scale. The relationship between the Psychopathy Checklist-Revised and the MMPI-2 was considered by Hansen et al (2013). The goal of this study was to note the relationship between Hare's four-facet model of psychopathy and the Minnesota Psychopathic Inventory-2 (MMPI-2) in a forensic sample. This consisted of 22 male prisoners from Bergen prison.

The MMPI-2 and the MMPI-2 Restructured Form was also used by Hoelzle et al. (2012) relying somewhat heavily on the validity scale in these tests. The MMPI-2 and the MMPI-2-RF validity scales appeared to be particularly well suited to assess symptom validity and the psychological status in secondary gain settings. It was noted by Sellbom et al. (2010) that the MMPI-2 was also used to detect feigned psychopathology. In the MMPI they used a structured interview of reported symptoms (SIRS). It was sought to establish whether malingering or non-

Continued next page

Con't. from page 6

(2012). Over-reporting litigants were compared with under -reporting.

Fluttert et al. (2013) sought to assess whether forensic early warning signs of aggression could be noted by using the Forensic Early Warning Signs of Aggression Inventory (FESAI) which could them lead to early detection plans to deal with this (EDP). Such early warning signs could prevent damage and harm being done to other individuals with whom such persons interacted. Some of the traits noted that provided information concerning early warning were those who were prone to anger, social withdrawal and those who had superficial contact and showed signs of non-aggressive antisocial behaviour.

The Rorschach test was used to good effect by Erard (2012) to provide expert testimony in the assessment of a psychological injury due to an accident. According to this research the Rorschach Performance Assessment System (R-PAS) offers an alternative to self-report methods which adds to the validity of the assessment. It also provides a useful check against exaggerated or minimised symptom presentation. It generates evidence concerning implicit traits and behavioural tendencies, and offers techniques for adjusting for abnormal response sets. Despite the criticism of others of the Rorschach test it is used in many cases as support rather than providing a single assessment based on its own findings alone.

Khadivi & Evans (2012) had a similar view as to the value of using Rorschach performance assessments. Khadivi and Evans concluded by commenting on the advantages of incorporating the use of the Rorschach test to verify self-report methods.

Another approach is the use of the Clinical and Risk Management (HCR-20) to assess violence risks. According to Jung et al (2013) researched into use of this method in order to conclude on the possibility of future violence of offenders. They sought to investigate the validity of the HCR-20 method in order to provide the necessary risk management for individuals with tendencies towards violence. The validity of the HCR-20 was also used by Vojt et al. (2013). Again to predict that likelihood of violence occurring among 109 male mentally disordered offenders in a high security forensic hospital. Their result indicated that the HCR-20 did not predict future violence regardless of setting i.e. in the community or as an in-patient. Data on violent incidents including reconviction were collected from a variety of sources. However, systematic tailoring of care and treatment plans were found to result in the reduction of violent incidents. They considered that further research was required to better understand this practice leading to violent behaviour.

Gowensmith et al. (2013) asked how reliable forensic evaluations were of legal sanity. It appears that when different clinicians evaluate the same criminal defendant's legal sanity they do not always agree. This Hawaiian study points out that its laws require multiple, independent evaluations when there is a question of "legal sanity". They examined 483 evaluation reports by psychiatrists and psychologists addressing the defendant's legal sanity in 165 criminal defendants. The reports did not however, always reach a unanimous agreement. There was however, a unanimous agreement regarding the legal sanity in only 55.1% of cases. Evaluators tended to disagree about a defendant's sanity when drugs and alcohol were involved in the offence committed. They did however, agree on the diagnosing of psychotic disorders and judges followed the majority opinion among the evaluators in 91% of cases. When judges disagreed with the outcome of the evaluations they tended to find defendants 'sane' rather than 'insane'. The authors point out that their study showed that reliability among practicing forensic evaluators into "legal sanity" was not as exact, and did not agree, as often as might be the case. The authors also recommended better and deeper training practices as being necessary to overcome these differences in the evaluation.

A structured interview of reporting symptoms, and its accuracy, was considered by Green et al. (2013). He investigated the use of the Structured Interview Reported Symptoms (SIRS). The SIRS-2 yielded an impressive specificity rate (94.3%) which was beyond the original SIRS score method of 92%.

Lander & Heilbrun (2009) considers the expanding practice of forensic mental health assessment (FMHA). He recommends the need for more detailed guidelines into use of such assessments. Five individuals are considered being helpful to indicate whether such reports are of value. These include a Judge, a Law Professor, a practicing Attorney, a Psychiatrist, and a Psychologist. There appeared to be limited consistency of these individuals with FMHA principles. There were however, significant correlations between a number of FMHA principles and a rating of report relevance and helpfulness to the court.

The value of the forensic mental health assessment was also considered by McLaughlin & Kan (2014). They studied the use of assessment tools regarding the competence of individuals to stand trial based on their mental state and the time of the alleged offence. They considered 4 instrument types used. These were the multi-scale inventories, forensic assessment and instruments used, cognitive neural psychological instruments and projective tech-

Continued next page

Con't from page 7

niques. They found that projective techniques were used by investigators.

A number of investigators including Zapf & Pirelli (2012) emphasised the importance of using multiple pieces of relevant data and for these to support one another. The use of such assessments with juveniles will be discussed in another section.

The evaluation specifically of individuals accused of criminal activities

The relationship between the Psychopathy Checklist-Revised and the MMPI-2 was carried out by Hansen et al. (2013). The goal was to investigate the relationship between Hare's Four Faceted Model of Psychopathy and the MMPI-2. They studied 22 male prisoners. Facet 4 of the PCL-R was the only facet that correlated statistically significantly with the scores on the psychopathy deviate scale of the MMPI-2. It has been well established that there is a relationship between psychopathy and serious criminality which includes violence. Psychologists and psychiatrists need to establish that psychopathy exists with some degree of certainty as it is a form of mental disorder (Hart & Storey, 2013). Among the assessment procedures used are diagnostic interviews, self-report questionnaires, and inventories.

Lander & Heilbrun (2009) carried out forensic mental health assessments (FMA). Their study examined the content of adult's criminal FMHA reports. As mentioned earlier they used a Judge, a law professor, a practicing lawyer, a psychiatrist and a psychologist to establish the validity of FMHA approaches. It is also vital to establish whether the alleged perpetrator of a crime is capable of standing trial or may suffer from insanity, as well as the predicted future dangerousness (Miller, 2013).

A study by Viljoen et al. (2010) surveyed 199 forensic clinicians about the practice of assessing 'violent risk' in juvenile and adult offenders. The importance of measuring the individual for psychopathy could not be underestimated. 79% of the clinicians reported using psychopathy measures in order to carry out risk assessments. Clinicians did not feel that juveniles should not be labeled psychopaths due to their ages.

It was noted by Weiss et al. (2011 that many of those evaluated suffered from intellectual disabilities. This being initially established through structured interviews and later through psychological testing using intelligence tests. Many of these individuals had co-morbid psychiatric diagnoses making it difficult to establish whether their intelligence was an important factor or the psychiatric illness.

Neuropsychology and the assessment of personal injuries

Psychologists and psychiatrists are frequently involved in cases dealing with the need for neuropsychological assessments. Uncredible performances have to be carefully assessed as there may be an element of malingering involved and this then needs to be carefully scrutinised (this will be discussed later). Neuropsychological assessment is particularly important when there is evidence that the individual suffers from mild traumatic brain injury (Boone, 2013). The objective is to ascertain whether cognitive impairment has occurred as a result of an accident. Kamper & Axelrod (2014) considers it important to detect cognitive impairment and its degree in quality.

Expert witnesses trained in the use of neuropsychological tests are frequently requested to ascertain the causes and prognosis of brain injuries (Larrabee, 2012). Their expertise is essential in helping the court make decisions concerning the future of such individuals and the impact of brain dysfunction. It is important also to assess the possible contributing factors of malingering. Frequently, experts are asked to assess traumatic injury and perinatal injury. With an aging population, elderly individuals frequently need to be assessed for dementia.

Psychometric testing must be carried out to establish the validity and reliability of disorders of higher cortical functions. This must be done both in adults and in children and the elderly (Reynolds & Horton, 2012). Pediatric neuropsychology is particularly concerned with children and adolescents. Emphasis has been given to the importance of these reports referring to neuropsychological testing being clear and understandable for the general public, including juries, lawyers and judges so that appropriate judicial decision can be made. In the addition to the use of psychological tests experts frequently use structured interviews of reported symptoms (SIRS). Great care must be taken to be aware of a feigned cognitive impairment (FCI) when compared with genuine presentations (GEN-C). There is a special need to identify cognitive disorders due to dementia, amnestic disorders, or specific cognitive disorders due to traumatic brain injuries.(Rogers et al.,2009).

Sometimes it is necessary to consider who should be held responsible for tort actions, and to define negligence torts (Foote & Lareau, 2013). These investigators consider it vital to seek information from records, plaintiff interviews, collateral interviews, and psychological testing.

Boone (2013) considering the clinical practice of forensic neuropsychology emphasises the importance of obtaining adequate evidence paying special attention to assessing when the individual does not perform credibly,

Continued next page

Con't. from page 8

possibly due to malingering. Personality testing is of special importance in such cases, especially testing for malingering which will be discussed later. Malingering frequently occurs in some mild traumatic brain injury cases. Again, there should be an emphasis on the avoidance of 'jargon' and the end reports must be clear to the ordinary person or interpreting what has been provided in the court (Demakis, 2009). Mention has already been made earlier of the use of the Rorschach Performance Assessment System (R-PAS) by Erard (2012).

The use of legally protected test materials must be emphasised and has been studied by Kaufman (2012). It was noted that solicitors frequently seek consultation from a neuropsychological expert, using both objective testing such as the MMPI-2 with a symptom validity scale (SBS), and projective techniques. It was pointed out that courts painstakingly avoid philosophical debates to focus on justifiable issues in cases that have been appropriately assessed by competent expert witnesses be they psychologists or psychiatrists. Legal claims can only be settled effectively when there is expert opinion based on objective and projective testing in relation to traumatic brain injuries (Kaufman, 2013).

Neuropsychologists practice in both civil and criminal courts. Some experts concentrate only on civil cases (Duke et al. (2012). These experts normally receive graduate and post doctoral training in neuropsychology. Personal injuries occur and the disability which can result needs to be carefully identified and measured using well validated psychological objective and projective testing (Rogers et al. 2009). Frequently there are other aspects that need to be assessed including post-traumatic stress disorders, and cognitive disorders.

Principles and practice of the independent forensic expert witness

Greenfield (2014) considers that many experts working with the courts in forensic cases achieve their goal of bridging the gap between clinical thinking and legal thinking. This results in an inability of the legal audience within the courts understanding many of the clinical and forensic psychologist's basis for their views. It is vital that expert witnesses are capable of explaining the evidence for their views and writing their clinical forensic reports for the courts (Karson & Nadkarni, 2013).

Mental health professionals appear to have three different sorts of information. There is the clinical interview, collateral information which provides useful background information, and the third area is psychological testing. It is the improper use of psychological testing that sometimes causes problems in the courts (Lareau & Ahern, 2012). McAuliff (2009) considers that psychologists attempt to testify in the court and base their evidence on clinical assessments and social framework evidence. Judges frequently fail to understand what is provided by experts and consider certain evidence inadmissible in the court. There appears to be some differences between clinical versus actuarial predictions in the assessment of individuals especially in regard to risk of violence and other serious offences occurring again. These are the contemporary issues that cause difficulties for the court when assessing the validity of forensic psychological reports (Ogloff & Douglas, 2013).

Recupero (2008) notes that forensic experts need to understand how clinical practice guidelines function in the court room, and the role they play. Courts are therefore much more cautious and show a high level of scrutiny when reports are presented by experts in the court. Scientific evidence is not always considered reliable or relevant in some of the cases being presented by experts. Of particular concern are reports by psychologists and psychiatrists based on opinions rather than objective expert evidence. There appears to be a difference between forensic reports and ordinary clinical reports. Sometimes there is a conflict of interest when experts present cases in court. This has the potential of encouraging what Reid (2011) considers misguided and even unethical behaviour, when in fact such experts should provide reports that are both honest and objective.

A study by Taylor et al. (2012) of 27 member states of the European Union (EU) shows legal differences between experts of these countries. Forensic psychiatrists were studied from Austria, Belgium, Denmark, Germany, Hungary, the Netherlands, Switzerland and the UK. The result of this study appears to indicate that a treating clinician can never be totally independent as an expert in carrying out both roles of the assessment and treatment of individuals. Taylor et al. (2012) emphasises the necessity of experts showing clarity and therefore being ethical in the manner in which they deal with the various roles vis a vis the forensic courts.

Specific areas of expertise in which expert witnesses function

There are a number of areas in which expert witnesses function including when assessing malingering, dealing with children and assessing such diagnostic categories as Attention Deficit and Hyperactive Disorder (ADHD).

Reference has already been made to the possibility or the potential for malingering especially in cases of neuropsychological accidents and also in cases of criminality.

Continued next page

Con't. from page 9

Barber-Rioja et al. (2009) recognised this point when using the Minnesota Multiphasic Personality Inventory (MMPI-2) in the case of criminal offenders. Rogers et al. (2010) also noted the tendency towards malingering possibly interacting with confusion or insight into symptoms of a particular problem. Rogers et al. (2010) used a Structured Interview of Reported Symptoms (SIRS) and concluded that malingering is a possibility even with repeat administration. Frequently, individuals feigned psychopathology both in the use of MMPI-2-RF and other testing carried out (Selbourne et al., 2010). The author of this article recommends in such cases that specific tests be used to assess malingering rather than relying on the MMPI-2 and other tests such as Structured Interviews. Some of the useful tests to be considered are the Wildman Symptom Checklist and other specific tests geared to identifying malingering.

In the case of the assessment of children, clinical interviews are frequently used asking the child to draw figures doing something to reveal emotional experiences they may have had (Macleod et al., 2013). Alleged juvenile offenders were assessed by Spice et al. (2010) using the Risk Sophistication Treatment Inventory (RSTI) and the Structured Assessment of Violence Risk in Youth (SAVRY). 74 adolescents being considered for transfer to less secure units were assessed. Scores on the RSTI, Criminal Sophistication and Treatment Amenability Scales, were considered appropriate for sentencing decisions.

The author of this article prefers the use of the Eysenck Personality Inventory for Juniors since it has good norms by ages and sex. It also has a 'Lie score' which can be effective in identifying the possibility of malingering or the desire to deceive the result. ADHD is frequently associated with pathological behaviour in children. Kingston et al (2013) noted that assessment of ADHD frequently revealed dysfunctional anger, and impulsive aggression. The assessment result was based on self-report and observation reports of others in schools and elsewhere. Such assessments have been primarily used with adults but could possibly also be used with children and adolescents.

Highlighting ICP Inc.'s Core Values: Wellbeing and Women's Challenges

Qi Gong Training in Self Care

Chok C. Hiew, Ph.D.,
University of
New Brunswick, Canada

Qi Gong is a complementary form of Eastern medicine that has been practiced since ancient times to promote healthy aging and emotional wellbeing as well as to overcome adversities such as pain and disease (Hiew, 1998; 2006a). Researchers have long documented that Qi Gong training regulates the heart beat or rhythm, normalizes blood pressure and pulse rate as well as the enhancement of the immune system and vital organs functioning. The practice utilizes a set of meditative therapeutic exercises to enhance protective resilience and self-regulation of one's emotional and physical states. Qigong as a form of meridian therapy enables practitioners, through the letting-go action, to release and eliminate trapped stressful energy stemming from accumulated cognitive-emotional and biological stressors. They are the source of a disruption of the body's normal healthy functioning and of one's emotional equilibrium. The body's inherent self-repair response is activated to restore resilient life and blood flow and rebound back to health (Hiew, 2005a; 2006b).

Over the past decade, I have offered brief evidence based Qi Gong training that has been effective for people suffering from a wide range of problems such as emotional trauma and PTSD, refugees in war torn countries, child sexual exploitation and natural disasters such as earthquakes and tsunamis (Hiew, 2001; 2002; 2005b). Qi Gong has proven to be a very cost effective intervention for medically difficult to treat diseases such as fibromyalgia. Clinical trials have shown that after nine hours of Qigong training (by the author), together with daily Qi Gong self-practice over four weeks, fibromyalgia (characterized by chronic pain, fatigue, insomnia and depression) produced changes and benefits beyond standard medication (Lynch, et. al., 2012). In a subsequent case report, those who continued their daily practice over a 1-year period had their chronic condition completely resolved (Sawynok & Hiew, 2012).

More recently I have designed a tested system of meditative Qi Gong exercises or WHQ (www.wisdomheartqigong.com) for those interested in self-care. It is especially matched to populations like the elderly or those with body pain and/or limited physical ability or in poor health. A controlled study using an Indonesian sample of elderly in nursing homes found clear evidence of balanced standing, improved ability in walking, muscle strength (hand grip), positive mood, relaxation and wellbeing (Hiew 2015).

Participants can readily learn the prescribed user-friendly gentle movements, physical breathing, and detachment from negative thoughts processes. The exercises can be done standing for short periods of time and/or sitting comfortably. For the exercises to be effective, it is essential to train the person's to be skillful in shifting out of the normal ongoing mental state by sensing one's physical body and to feel and spread the radiant heart energy flowing to every part of the head, torso and limbs. In a demonstration of WHQ exercises at the 2015 Toronto ICP conference, participants after a 20 minute practice, have expressed experiencing a sense of serenity, relaxation, and evident physical and emotional wellbeing.

Training workshops normally have a duration of 12 hours over two days. After each practice session of 30-60 minutes most participants can readily feel physical changes such as elevated electromagnetic flow, warmth and tingling especially in the hands (from increased blood flow), heightened relaxation and deepened respiration. There is often a rapid relief of pain, fatigue and sleeplessness overnight and persistent practice over a few weeks. The practitioner experiences the healing process from the enhanced qi and blood flow that leads to a harmonious and coherent state of wholeness.

MINDFULNESS FOR PSYCHOLOGISTS: HEALING YOURSELF FIRST

Jennifer Boyce, PhD., C. Psych.
CANADA

Presentation notes from the ICP, Inc. annual convention, August 1 -3, 2015, Toronto, Canada

PSYCHOLOGISTS & STRESS

- To what extent do you consider that you have been under stress as a result of your job?
- 75% of psychologists said that they were moderately or very stressed
- In a survey of 155 psychologists, 1/3 experienced anxiety or depression & 40% reported episodes of exhaustion in the previous year (Cushway & Tyler, 1994)
- One out of 8 psychologists was worried about their alcohol consumption (Mahoney, 1997)

SOURCES OF STRESS FOR PSYCHOLOGISTS

- Workload
- Client related difficulties
- Organization structure or processes
- Relationships/Conflicts with other Professionals
- Lack of resources
- Professional self-doubt (Delardo, 2008)

PSYCHOLOGISTS' STRESS & WORK SETTING

- Practicing psychologists report more stress than research psychologists but also more positive influence from work
- Solo practitioners reported less support than either group practice or agency responders
- Psychologists in private practice were significantly less stressed and more satisfied than those working in either institutional settings
- Across all work settings men worked more hours, spent more time in therapy, and reported more negative client behaviours (Wise, Hersh, & Gibson, 2012 or cited in Wise, E., Hersh, M., & Gibson, C. 2012)

PSYCHOLOGISTS & PERFECTIONISM

- Psychotherapists reporting burnout reported beliefs such as '*I must be totally competent, knowledgeable and able to help everyone.'*
- Psychologists with higher levels of perfectionism reported higher stress & higher levels of burnout
- Only adaptive perfectionism (e.g. setting high standards) correlated with burnout (cited in D'Souza, Egan & Rees, 2011)

PSYCHOLOGISTS' SELF-CARE STRATEGIES

- Talking to other psychologists
- Exercise
- Talking to partner (Cushway & Tyler, 1994)
- Personal therapy
- Reducing caseload (Hirsch, 2009)
- Adjusting work-life balance (Coster & Schwevel, 1997)

A survey of 500 psychologists nationwide revealed 6 key strategies to maintaining a positive attitude and functioning well at work

- Self-awareness/Self-monitoring
- Sense of humor
- Maintain profession identity/values
- Maintain balance between personal and professional lives
- Spend time with spouse or partner
- Engage in hobbies (Ruper, P. & Kent, J., 2007)

PSYCHOLOGISTS—MEDITATION & YOGA

- Half of psychologists reported practicing meditation or prayer (Mahoney, 1997)
- A qualitative study interviewed 12 licensed psychologists with a yoga practice a minimum of 30 minutes/ week for at least 6 months (Hirsch, 2009)

Continued next page

Con't from page 11

- Subjects reported that yoga (as distinct from exercise), increased awareness, decreased reactivity, & enhanced ability to be empathetic & present with clients.

PSYCHOLOGISTS & MINDFULNESS

- Mindfulness is being fully aware of whatever is happening in the present moment, without filters or judgement
- Observing, watching, examining. You are not a judge but a scientist
- Mindfulness involves the cultivation of
  1. Intention—purposeful and conscious
  2. Attention
  3. Attitude—non-striving, acceptance, and curiosity
- Ethical behavior is considered essential for the development of mindfulness because it frees the individual from the agitation that unethical behavior produces. (Grossman, 2010)
- Traditionally, behaviours unconducive to a calm mind include killing, lying, stealing, sexual misconduct & use of intoxicants
- Important to nurture an affective state of kindness, patience, tolerance, compassion, acceptance, and openness

Mindfulness Based Stress Reduction for Psychologists (cited in Wise, Hersch, & Gibson, 2012)

- Positive effect on psychologists' perceived stress
- Decreased psychological distress—trait depression, anxious affect, remuneration
- Increased empathy & self-compassion
- Increased sense of spirituality and interconnectedness

Results of study on 7-week loving-kindness meditation workshop (Cohn & Fredrickson, 2010)

- Greater resilience traits
- Reduced illness symptomatology
- Improved interactions
- Mindfulness predicted greater life satisfaction & reduced depression
- Benefits sustained 1 year later

Double blind study: One group of psychotherapists were taught meditation by a Zen master for 9 weeks for 1 hour & a control group (Grepmair, Mitterlehner, Loew, Bachler, Rother & Nickel, 2007)

- Researchers measured symptoms in patients seen by psychotherapists over the course of the study
- These were psychiatric inpatients in a hospital with the most prominent diagnoses being severe adjustment disorders, mood disorders, personality disorders, anxiety disorders, substance abuse & obsessive-compulsive disorder

Results:

- Patients of the Zen-trained therapists were more likely than patients of the non-Zen-trained therapists showed significantly better results at the T2
- Lower levels of somatization, insecurity in social contact, obsessiveness, anxiety, anger, phobic anxiety, paranoid thinking and psychoticism
- Patients better understood their own psychodynamics, and the characteristics of their difficulties, and the possibilities and goals of their development.

MINDFULNESS EXERCISE

1. Lay down with your knees bent & feet flat on the ground
2. Observe your breath for 6 breaths
3. Exhale by gently contracting lower abdomen inward & upward for 6 breaths
4. Exhale using above technique for 4, 5, 8, 10 seconds, etc. to maximum comfort level for 2 breaths per interval
5. Stay at maximum for 6 breaths
6. Rest
7. Sit up and inhale freely and exhale at maximum for 6 breaths

"There is no way to peace. Peace is the way." - Thich Naht Hahn

2015 DENMARK-GRUNWALD FEMINIST RESEARCH AND SERVICE AWARD WINNER

Asking "So what?" about our Scholarship: Why Values Matter When Planning, Doing, and Disseminating Research

Janice D. Yoder, PhD
Kent State University

Author Note

Versions of this talk were also presented at the meetings of the Canadian Psychological Association, Ottawa, July 2015 (sponsored by the Society for Women in Psychology, SWAP) and were included in my final editorial for *Psychology of Women Quarterly*, December 2015. [Excerpt here]

A brief history of the psychology of women begins with studies making simple gender comparisons — that is, men do this and women do that — summarized by Maccoby and Jacklin in their 1974 seminal narrative review, "The Psychology of Sex Differences." Since then, the field has obviously burgeoned, becoming more sophisticated about how we summarize gender differences (with meta-analysis and now even metasynthesis) as well as becoming more critical about what is to be gained from difference

Continued next page

Con't. from page 14

thinking. With the rise of social constructionist thinking in our field has come the realization that at least some differences between women and men derive from the different social contexts in which each is socialized and in which, even as adults, each of us is immersed (Yoder & Kahn, 2003). For example, as adults, contexts shaped by forces, large as well as small and subtle (e.g., task instructions, the expectations of others, and differences in social statuses) can affect how women and men operate and are perceived by others.

In my text, I contend that being able to think critically about these gendered contexts and their impacts on us as women and men is a key skill that we should nurture in our students (Yoder, 2013). Gender matters. It, along with age and race, is a first impression that people encode about each of us, and it plays a pervasive, but often hidden, role in most, if not all, of our social interactions. This is the meta-message that underlies the first half of my textbook and course, and it lays a foundation on which we build to explore topics critical to women's and men's lives (e.g., body image, violence, close relationships, work, and mental and physical health).

Although much of this supposition about these extracurricular teaching goals is justifiable from what we discuss in the field, as a teacher-scholar I knew I needed empirical evidence. So my co-authors and I surveyed five different Psychology of Women classes taught at three different universities by three different instructors using two different texts (Yoder et al., 2007). We conducted these surveys both at the start and then again at the end of the course. As we'd expect given prior studies of the impact of women's studies classes, students' feminist identification intensified from the start to the end of the course.

But our "So what?" question urged us to explore what drove these changes so we tapped into students' thinking about gender differences. We did this by focusing in on specific cognitive abilities (math, spatial, verbal, and memory skills), social skills (aggression, activity, empathy, and smiling), and motor skills (throwing velocity and flexibility) identified through existing meta-analyses to document gender differences. Half of these skills favored women; the other half, men. We also knew from research on stereotype accuracy that students are often accurate at picking up on gender differences that meta-analysts confirm (Hall & Carter, 1999).

We created a measure of students' endorsement of these explanations, crossing each skill with four plausible explanations focused on biology, personality, socialization, and social context. Students were presented with an opening stem (e.g., "Men are better at math than women because…"), and then they were given four possible explanations and asked to rate how likely it was that each explanation was correct. For the math stem for example, the biological possibility stated that "Men's and boys' brains are better suited to doing math"; the personality explanation: "Men's and boys' personalities are more logical and analytic"; the socialization explanation: "More parents and teachers encourage boys in math"; and finally social context: "People don't expect women to do well in math."

Pooling data from all students together, biological and personality thinking declined from the start to the end of the semester whereas endorsement of socialization and social contextual explanations increased. Both biological and personality explanations assume that differences reside within people, representing essentialist thinking. In contrast, socialization and social contextual explanations focus on the influences of contexts external to the person, suggesting constructionist thinking. The general pattern then is that students' essentialist thinking declined whereas their constructionist thinking expanded across the course.

Our next step was to link the two, exploring whether changes in difference thinking were related to changes in feminist identity. We found this connection for both personality and social context explanations. Declines in students' endorsement of personality explanations were associated with declines in non-feminist passive acceptance of the status quo and in pro-feminist increases in students' desires to immerse themselves in materials and experiences related to women. Even more pervasively, greater endorsement of social contextual explanations was associated with strengthened feminist identification across the full spectrum of identity dimensions.

But even more heartening for me as a throw-back second-wave feminist believer in the importance of making the personal political, students' endorsement of essentialist thinking was linked to beliefs about not being able to eliminate social and cognitive differences between women and men whereas constructionist thinking was linked to students' beliefs in the possibility of social changes across the full range of skills we studied. Activism is futile if one believes that something cannot be changed so I was especially delighted when what changed in students' essentialist and constructionist thinking across these courses was consistent with beliefs in the potentialities of social change. Add to this students' stronger feminist identification, and they have both the motivation and the direction to make a difference.

So far I have argued that we need to ask "So what?" when we plan and do our research, including when that

Continued next page

Con't. from page 15

research extends to understanding our teaching. My final piece related to asking "So what?" today has to do with dissemination. As an editor, I came to realize that part of my responsibility to *PWQ* was to disseminate the work published in it more broadly than to other scholars (although certainly impact factors remain quite influential in the world of publishing and *PWQ*'s is strong). I had the additional motivation of editing a feminist journal and hence a feminist obligation to put good research into the hands of people who might put it to good use in the service of girls and women.

But many, many more of us are scholars, not editors, so that my point today has to extend to authors who themselves can play an active role in getting their good work into the hands of people who can use it, as well as take this process a step farther by exploring what happens when their work is shared. Indeed, this is the next step that Corinne Moss-Racusin and her colleagues (took with their own research area (Moss-Racusin, Molenda, & Cramer, 2015). Prior experimental work on gender bias in STEM (science, technology, engineering, and math) fields, including research conducted by the current authors, was picked up and disseminated in three online articles which attracted 831 written comments from readers, both professional and lay. The authors in their *PWQ* paper used both thematic and quantitative analyses to explore patterns in these posted comments.

Their thematic analysis revealed 433 negative and 754 positive comments, with some postings obviously including a mix of both. These negative comments included expected sexist remarks directed to women (e.g., "In every competitive situation, with a few exceptions, the women I worked with were NOT competent, by comparison with the men") along with occasional sexist remarks directed at men (e.g., "For an equally skilled man or woman, I would prefer the woman"). A significant proportion (41%) of these negative comments offered some justification for the readers' bias, drawing on biological explanations (e.g., "I think one of the largest subconscious factors here is that women get pregnant"), personality and other non-biological factors (e.g., "The successful males I train simply seem to be hungrier and more willing to make the per sonal sacrifices required to get ahead of the competition"), and women as perpetrators of their own failings (e.g., "Women have expectations of men to be financially successful and then complain about more men at the top").

Of all the negative comments, the ones that had to be most disturbing for the authors were from commenters who refused to accept their results. These disagreements with the results relied on personal opinions that gender bias no longer really exists (as in "I am a scientist and most of my co-workers are as well — No gender bias at my job!"), flipped the findings by insisting that gender bias targets men, not women (as in the lament that it would be: "Harder for me to get a job at Hooters"), and critically nit-picked at the study as a way to discredit it (e.g., "Why are your y-axes not labeled?").

On a brighter note, there were more positive than negative comments, with these positive comments clustering around two themes: agreement with the results and constructive responses that expressed gratitude for the study, reported occasional opinion change, and called for social change. The most pervasive theme expressing agreement with the results, appearing in fully 560 comments, validated the study's evidence of the persistence of bias with commenters' own experiences (e.g., "I am a female scientist, and even I sometimes struggle with bias against women"). Although similarly validating, another subset of agreeing comments added pessimism about possible improvement, with 74 comments like this one: "There is a bias and that will not change. At least not for a couple of decades."

Interestingly, when the authors compared those comments from readers obviously affiliated with a STEM field with those who were not, they found no differences, suggesting that responses were similar both within and outside the STEM community. And when they could determine the gender of the commenters, the patterns were pretty predictable with more negativity expressed by men and more confirmation of the persistence of sexism expressed by women.

The reason their study made my list of "So what?" exemplars is because the authors took the effect their work had on the general public seriously, capitalizing on its dissemination in public venues to use their skills as researchers to better understand its impact. By doing so, they began to see their own research as more than another source of evidence of sexist bias in STEM fields; rather, their study's dissemination itself became an intervention targeting prejudice-reduction. As they go on to point out in their Practice Implications section of their paper, "…many current STEM diversity initiatives rest on the theory that exposing participants to evidence of gender bias will ultimately reduce bias and enhance diversity" (Moss-Racusin et al., 2015, p. 206). However their analysis of comments about their original study calls for diverse approaches for targeting sexism in STEM that are tailored to specific audiences.

For example, comments from most women working in

Continued next page

Con't. from page 16

STEM areas suggest that they already are aware of the existence of persistent gender biases so that practitioners might focus less on awareness per se and more on how to translate women's awareness into effective action. Furthermore, the greater likelihood that negative reactions came from men than women highlights the need to tackle how exposure of unfairness might threaten men and male privilege, making it likely that evidence, no matter how sound, will be denied or diminished by some men. My guess is that it takes quite a bit of open-mindedness to make one's research so publically open to criticism and even more stoicism to actually read and think dispassionately about all that is said. I applaud Moss-Racusin and her co-authors (2015) for putting their passion for making a difference for women in STEM ahead of their own egos; in other words, for their courage to ask "So what?" and to learn from the answer.

It obviously is easier on the academic publish-or-perish treadmill to just "crank it out." In fact, I have one colleague who has advised doctoral students that the fastest and most likely-to-be-accepted path to publication is to create a scale: It's easy to recruit respondents and gather data online, data analyses are likely to impress reviewers because they are statistically formulaic and sophisticated, one's paper is likely to be widely cited if the scale catches on, and so on. But, "So what?" I have this nagging sense that we are being inundated by measures that will never be put to good use (Yoder, 2016b), although I certainly will acknowledge that a few scales, such as the Ambivalent Sexism Inventory (Glick & Fiske, 1996), have made important leaps toward refining and expanding our understandings of some important phenomena (such as sexism). And I certainly don't want to confine my call to asking "So what?" of any single research area nor do I want to get into finger-pointing at existing work, including those *PWQ* papers that never made it to my family's dinner table or to my students' blogs. I also don't want to patrol what does and does not find its way into print in scholarly journals based on whether or not the findings have practice implications.

I also don't want to suggest that garnering media attention should drive the publication process or our research agenda. The widely cited journal, *Science*, finds itself at the center of a media maelstrom, making the front page of *The New York Times* over a paper the journal has now retracted and about which the author has admitted to lying about some aspects (Scheiber, 2015). The newspaper article goes on to insinuate that scholars' job and funding prospects may be enhanced if their work attracts media attention, suggesting that media visibility can trump sound scholarship in influencing the work researchers elect to pursue.

But I do want to argue that as feminist scholars and in our feminist publications, including journals, books, and texts, we do have an obligation to ask "So what?" of our research, our teaching, and the dissemination of what we do. In fact, I believe that, by adopting this imperative, we will necessarily have to be better researchers and better educators simply because we have more riding on our work than another notch in our publication belt and another batch of students making it through our classes. By putting our work out there for others to use, we have a heightened responsibility to make that work sound. So, I call on you to, every now and then, step back from what you are doing to distill it down to a few sentences in everyday language, to take it to the dinner table, and to run it by your students to gauge its meaningfulness and to help guide your time and energies toward moving forward in meaningful directions.

CONSULTING PSYCHOLOGY

A CENTENNIAL: The First 100 Years of Consulting Psychology in APA 1915—2015

Ann Marie O'Roark, PhD, ABAP

My story for you today begins and ends with questions. The question that started this story was posed in the days of the "war to end all wars," World War I, 1915, "Who can call themselves a consulting psychologist." The story continues through the time known as the "winds of war" and World War II. The Consulting Psychology first 100 years story includes a climatic dénouement during an era of regionally contained wars, and concludes in the current time of endless wars and intimations of fresh questions that consulting psychologists might choose to address, along with a reprisal of what appear to be sustainable results of a longitudinal investment by psychologists in consulting as a critical function within the discipline.

This walk-though synopsis of consulting psychology's first100 years is divided into five sections, determined by zeitgeist and ortgeist more than even numbers of years. 1915-1927; 1927-1946; 1946-1987; 1987-2007; 2007-2016.

At the time of the first World War, when US soldiers and their families were struggling with the hardships and consequences of sending troops to Europe to engage the Kaiser's attempt to conquer and rule Europe and beyond, American newspapers began asking various "experts" and specialists in mental health for opinions about the problems being encountered. The American Psychological Association, founded in July 1892 by G. Stanley Hall at Clark University, was 23 years old when the leaders decided that there needed to be some way to assure that the public's questions and concerns were addressed by those most qualified and knowledgeable about human behavior and mental status.

The men who spearheaded the movement to identify who could announce themselves as psychological experts were the leading experts in intellectual and personality assessment. Three also served as APA presidents: Guy Montrose Whipple, who made the initial Council proposal, Lewis Terman who was a member of the Committee of Five, and James McKeen Cattell was a member of the 1920 Standing Committee on Certification. After becoming a Section of Consulting Psychology, in 1924 it became a Division. The next year, in 1925, APA incorporated.

In those years, as remains a reality today, psychologists held strong and polarized opinions about science, theory and, of course, who had the right to determine who was and who was not qualified to give "expert opinions." As a result, in 1927, APA Bylaws were edited to eliminate Consulting Psychology as a division and as a certification group.

The years between 1927 and 1946, known as the "winds of war" era and culminated in World War II, saw the emergence of applied psychology. 1 The exiled Division of Consulting Psychology continued as a free lance group and became the Association of Consulting Psychologists (ACP). 1 They soon joined with the former APA clinical section/division and became the American Association of Applied Psychology. In this period of

Continued next page

Con't. from page 18

mergers and spin offs, the AAAP helped organize a New York State Applied Psychology Association which in turn developed the New York State Psychological Association. At the end of WWII, APA reorganized and the Consulting Psychologists, AAAP, were included as Division 13.

If you are attending the American Psychological Association Convention, please accept my invitation to attend the APA Division 13, now called Society of Consulting Psychology, for their Centennial symposium where John Hogan, History and Obituary Editor for the American Psychologist, will discuss these mergers and spin offs which included the development of the first ethics code for psychologists.

The post war era, including times of regionally contained "conflicts" [small wars], saw the emergence of consulting theories and techniques, especially in the areas of mental health, group dynamics, educational consulting.

The first president of the new Division, APA13, was Jack W. Dunlap (1902–1977), who also served as president of the Psychometric Society, the Human Factors Society, the Military Division and the I/O Division. Dunlap served in the military and was prominent in military research and assessment advancements. After a time with the Psychological Corp, a computer testing and scoring organization, he started his own company, Dunlap and Associates, which he headed until his retirement in 1966. The company was quite successful, specializing principally in human factors work for industry and government on a variety of problems, including highway safety, emergency medical care, and flight training. Donald Super, whose early career was with the YMCA, also served in the military and as a president of the Military Division, APA18. He said that "one of the great things about NVGA [National Vocational Guidance Association] is the friendships which activity in the Association fosters. [NVGA] not only helps improve services to youth, adults, and the aging, it provides a focus for friendship." He received the 1983 APA Award for distinguished scientific contributions to applications of psychology.

Process consulting and organizational culture, leadership and followership, and international awareness began to flourish in the Consulting Psychology Division. After a disagreement about the name of the Division, a group split off from 13 to form the Psychologists in Independent Practice, Division 42. Several of the influential division 13 presidents and theorists of that time of fermenting and formulating were: George A. Kelly, Albert Ellis, Gordon Derner, Norman Kaplan, Ray Fowler and Vytautas Bielauskas. Vy, a recognized WWII hero, left Lithuania the day the Russian troops arrived, to craft a career in psychology; completing academic studies in northern Europe, moving to the US and finally serving as Chairman of the Xavier University Psychology Department 1959-78.

The fourth phase of consulting psychology as an interest group/division in APA is based on a major "paradigm" shift: From individual's in leadership roles who were recognized for their unique and outstanding contributions to the discipline of Psychology to the election of presidents some of whom were already Fellow status, but some who were not. All had a special interest in and gave attention to the development of the division, and dedicated time to activities aimed at fulfilling its purpose.

Clyde Crego, who died just two months ago, was interested in continuing education workshops being approved by APA to award CE credits, and had a glint in his eye about a midwinter event. Each one in this montage added to the strengthening of the division and movement toward achievement of the 1915 mandate to find a way for APA to determine who could call themselves a consulting psychologist.

The growth began with Goal Setting at a Board Retreat planned by Paul Lloyd and Ken Bradt. Diversity of Membership was a priority and establishing the consulting psychology knowledge base was a close second. Another critical incident was the initiation of the midwinter conference, but equally relevant to stabilizing of the group was conceptualizing the operations and constituencies of the group, which included attention to publishing knowledge

Continued next page

Con't. from page 19

and information about consulting psychology. The culmination and denouement moment in this story of the 100 years came in 2006, when the Education and Training Guidelines for doctoral and postdoctoral level consulting psychology, organizational consulting, were approved by APA Council as APA Policy. This seven year composition by the division E&T Committee came about after the division shifted attention from seeking APA approvals as a specialty, a proficiency or a certification agent.

The fifth phase of the first 100 years leaves important questions to be answered in the next 100 years. Since endorsement of the E&T Guidelines for organizational consultants and achieving what was initially intended to be the first of a series of E&T guidelines for consulting done by those not fully invested in a career in organizational consulting psychology, but more often consulting on their specialty topic, the group, by this time renamed the Society of Consulting Psychology, both expanded and contracted. More members and reducing attention to organizational –primarily businesses, industry and services – and to "coaching" approaches.

To recapitulate and consider what sustainable solutions may have been produced through the longitudinal perseverance of the group and dedication to finding a solution to a problem that was "global" for APA and arose out of global conflicts:

1. E&T Guidelines for determining who can call themselves a Consulting Psychologist [CP].
2. Beginning the Organized Collections of CP knowledge.
3. WILL THE NEXT CENTURY PRODUCE A LIBRARY OF CP THAT INCLUDES a Super's Rainbow Model and Killberg's Model of Psychoanalysis and Systems Theories, Freedman's Phoenix Model of the adjustment process in technological changes in large organizations?
4. Frameworks for Consulting Psychologists to use when diagnosing and planning interventions.
5. WILL THE NEXT CENTURY BE ABLE TO COMPILE AND CLASSIFY THE FULL RANGE OF Consulting LENSES?
6. Overcoming the stigma of working with a "psychologist-shrink" by putting on the COACHING CLOAK-with shoulder-pads.
7. WILL THE NEXT CENTURY FIGURE OUT HOW TO SORT OUT THE KINDS OF COACHING BEST DONE BY GREYHAIRS, BY FRESH PHDS, BY TRANSITIONERS?
8. Beginnings of strategies for consulting in diverse cultures, countries, populations.
9. WILL CP BEGIN TO DEVELOP THE CONCEPTS OF HOW TO AND WHEN TO INTRODUCE VARIOUS INTERVENTIONS INTO A PARTICULAR GROUP IN A PARTICULAR PLACE?

##

Worth asking . . .

Congratulations from Japan on APA's 100th Year of Defining Consultating Psychology and 75th Anniversary of ICP, Inc.

Machiko Fukuhara, PhD., President, MicroCounseling Institute of Japan, Tokyo, Japan; ICP, Inc. President-Elect

I feel honored to be able to participate in this celebration symposium.
Consultation has played an important role for human beings. People need to live with others, asking for any help when needed.

1. I understand that the Consulting Psychology Division (Div.13) in APA was established early about the same time with the divisions for Clinical Psychology, School Psychology and Counseling Psychology. Consultation played an important role in those professional helping relationships. Before those helping-professionals were introduced in Japan, around the middle of 20th century, consultation (sodan in Japanese) by laymen done mainly at working places played helping roles to employees for their problems at work or even for their personal problems. Later the function of consultation systems in the business world became familiar among people as a sort of Guidance which helped them handle finances, manage the organization, etc. Those consultants were not necessarily professional personnel in terms of carrying psychology-based services.
2. Along with the introduction of professional psychology in helping such as, Counseling, School Psychology, etc., psychological services came to be recognized in Japan, especially in educational settings. And consultations to, for instance, teachers at schools, were carried by counselors and/or clinical psychologists. (At present the Industrial Counseling Association is offering certificates after some training, and psychologists play roles for training.)
3. Since the beginning of the 21st century, consideration for the mental health of the individuals and groups has been strongly voiced for their wellness. Caring for one from this viewpoint might not be done by only one professional or institution. Consultation or supervision is needed by counselors for their satisfactory works: Individuals, wherever they live, are multicultural beings. Being included in this idea, as a recent trend in Japan, are the various areas of helping professions, such as doctors, nurses, nutrients, occupational therapists, counselors, psychologists, etc. who are encouraged to work cooperatively in the respective institute and/or community to support different kinds of individuals for their wellness. Those professions consult with each other within this kind of cooperative linkage. One example, is caring for the old. In Japan, the number of elders has increased (in a few years one forth of the population will be over 65 years old), and in the near future, they could be taken care of through this system in the community.
4. ICP, Inc., with its long history, has contributed to human beings for keeping up with human rights and being sensitive to the needs of the times. It is amazing that it continues to hold an annual conference every year since its establishment in 1941. And seeing the theme of each conference, you will see how we are sensitive to the trend of the times and how we have challenged helping individuals for their mental health and well being.
5. One individual cannot live alone. One has to be strong to support him/her self, of course, but he/she needs social support in order to meet the challenges to "quality of life." Roles of consultation will become more important there.
6. It is an honor for us, the Japanese members, to work for the 75th Conference in Yokohama which will be held in conjunction with ICP2016, the Congress. It has been 26 years since our 48th Conference was held in Tokyo. People all over the world are facing challenges from disasters of many kinds, wars, etc. but we have to live with these things and go forward towards wellness for people and for the world. Even after many years of desiring this change for all human beings, the challenges to the rights of human beings all over the world have not changed. Let us work on our common issues and do whatever we can.

We, Local Arrangement Committee, Drs. Katou, Nagy-Tanaka and myself, representing the Japanese, are welcoming you. We look forward to seeing you here. We are hoping to set many opportunities when our members will talk together in person which is one of the traditions of the ICP, Inc.

Dimensions of Globalization Among Urban Indian Youth

Sonia Suchday, Ph.D.
Richard Velayo, Ph.D.

India is a fast-globalizing economy where young people make up 65% of the population. Globalizaiton has brought with it rapid and inequitable development and has impacted on the lives of young people, particularly emerging adults. The current study evaluated the dimensions along which globalization impacted young people.

Young college students from Mumbai (n=56) provided written descriptions of how globalization has changed their lives – and impacted on families and society. Content analysis of participants written responses by three independent raters provided a series of themes regarding the impact of globalization. Additional participants (n=211, 42 males, age=18.65 years) responded to each theme on a Likert scale "never", "sometimes", "often", "always" as a part of a larger study on globalization and health.

Factor analysis of the responses yielded four factors with eigenvalues >1 and high internal reliabilities. Sociocultural changes (alpha=.95) – described growth in egalitarian values, adoption of western popular culture - music & clothing; increased unhealthy behaviors (alpha=.84) included items that described acceptance of smoking, drinking and use of "vulgar" language; materialism (alpha=.61) described less time for family; and deterioration of traditional values (alpha=.70) defined less respect for age, traditions.

Clearly, globalization has positive and negative effects including exposure to multiple cultures and growth of egalitarianism. Aspects of globalization such as increased smoking and drinking may be associated with health consequences for individuals and societies, and may conflict with traditional values (e.g., spiritual growth versus materialism).

These many aspects of globalization need to be explored to define their impact on health and well-being.

BOOK REVIEW

(Publisher note: Part of this review was published in IP 55.4, December 2015.)

The MultiGradeMultiLevel-Methodology and its Global Significance: Ladders of Learning - Scientific Horizons - Teacher Education (Theory and Practice of School Pedagogics Book 34)
Authors: Müller, Thomas, Ulrike Lichtinger & Ralf Girg (2015)
Publisher: Prolog-Verlag Immenhausen, 266 pages

What if children loved going to school? What if they enjoyed learning according to their lives and interests? What if their learning processes were supported in a way that they corresponded to their abilities and needs? What if they learned in their own rhythm and pace? What if teachers were able to support such learning through an individualized arrangement of learning materials and showed an attitude of appreciation? What if schools were maintained mostly by the students themselves and were surrounded by flowering gardens full of herbs and vegetables and fruit? If schools taught students how to live their lives in a sustainable way? Is that utopian? A non-existent paradise of learning? Does that sound like an exclusively perfect world that can only be found in upper class schools and would never be affordable for anybody else?

Thomas Müller, Ulrike Lichtinger and Ralf Girg of the universities of Regensburg and Würzburg describe such a learning and teaching culture, that has been practiced for thirty years in rural South India at Rishi Valley, in the state of Andhra Pradesh. The authors convey vividly an exemplary modern, inclusive, community-based and environmentally sustainable school culture, we, in many places in the so-called western world, are far away from. Each child there, so the book plausible emphasizes, is respected in its uniqueness. And it is encouraged and educated to cooperate responsibly with a sense for the whole community. At the same time the children show high learning performances.

The Rishi Valley approach has been developed by Padmanabha Rao, Anumula Rama and their team since the 1980s, inspired by the ideas of the philosopher Jiddu Krishnamurti (1895 – 1986). The so-called MultiGrade-MultiLevel-methodology (MGML) has won many national and international prizes for education, sustainability and social entrepreneurship. Today this approach can be found in more than 250,000 primary schools in India and in more than 10,000,000 children benefit from it. It has also been spreading out to many countries in the world and is thereby one of most innovative and effective developments in school education worldwide.

The authors of the book, who - for many years - have been cooperating with their Indian partners at Rishi Valley, step by step reveal the secrets of this success to the reader. Their book of 200 pages is deeply exciting because it reminds the reader of his own educational ideals.

The secret of the MGML-Methodology evidently can be found in the individualized student centered learning in mixed age groups with the help of highly structured pathways, the so-called “ladders of learning”, through prepared material collections, and accompanied by teachers, whose interactions are inspired by deep appreciation and mindfulness.

In the last part of the book the authors give examples of successful adaptations in German and international primary, secondary, higher and special needs education. Thomas Müller, Ulrike Lichtinger and Ralf Girg themselves have been using and evaluating this approach in their own teachings at the educational faculties in Regensburg and Würzburg for a decade now.

Both the methodology and the attitude may serve as models for a truly modern education, because individual differences and needs in learning speed are globally becoming more and more acknowledged. The MGML-approach allows for teaching formats that take these differences into account and at the same time foster children´s ability to support each other in learning groups. This book is an inspiration to all who want to strengthen schools as spaces of learning and teaching that truly meet the needs and challenges of the 21st century.

Reviewer:
Nils Altner, PhD, researches, teaches and publishes on education, mindfulness, health and personal development at the University of Wurtzberg.

A Poem; A Fictional Interview; A Letter from the Past

The Autumn Leaves

Dr. Ani Kalayjian

The autumn leaves are around me, I step on them carefully,
I cannot help it, as they are fallen all around me.
Of course, its autumn, I convince myself…
Perhaps that's why they call it the Fall,
As so many leaves fall all around ...

I am scared to walk…to crush the leaves…
Like I'm crushing the fragile heart of Mother Nature…
When I step on the leaves I see you coming alive…
I hear the soft crying sound of the leaf
and I feel you in my soul even more deeply...

Then I see a resilient rose...
In spite of all the harsh winds,
one determined rose has made it through…
I think of you once again and I wonder…
Are you that resilient rose I see?

I feel your gentle spirit like a halo around me,
then I see you once again in the petals
of the one strong and resilient rose...

I am now passing through the streets of New York,
Here is a child crying for Mom,
You come alive in my mind once again...
as I wonder if you are too crying for unity?

Do you feel lost while searching?
Are you tired and resting by a tree?
Or are you transformed to a red rose?
An aromatic and resilient rose,
amongst the thousands of the fallen leaves...

DrKalayjian@Meaningfulworld.com

Life as a Playful Journey: Intercultural Encounters

David Y.F. Ho, PhD
ICP, Inc. President 1989-90
Program Chair 1988: "East -West Dialogue: The Role of Psychologists in Promoting Health and Well Being."

Abridged excerpt from "Enlightened or Mad? A Psychologist Glimpses in Mystical Magnanimity"
Publisher: Dignity Press in 2014.

The excerpt, as do other parts of the book, takes the form of an imaginary interview, in actuality, an internal dialogue between my two selves: David and YF, different but complementary.

David is my Western-educated self, analytic, informed, and thoughtful. He sees things from different perspectives, Eastern and Western. He puts things in context and spells out their implications. He functions as a detached observer, summarizing periodically and giving feedback to YF. He tempers YF's extremist proclivities and keeps him on track. Occasionally, he functions as a therapist for YF. He acts as a catalyst, challenging YF to go deeper or to clarify issues, thus pushing the interview forward.

YF is my Chinese self, born and raised in Hong Kong. He derives knowledge from firsthand experiences, including those of "madness." His mind is complexity itself, critical, incisive, and self-reflective. Characteristically direct, he minces no words. He is intense in both action and thought, single-minded in the pursuit of his goals. He has a low threshold for enthusiasm and is almost incapable of doing things halfway.

David: A spiritual quest does not have to be a journey of solemn, staid drudgery, but of dedication
intermingled with playfulness. You were born in the Year of the Rabbit, according to the Chinese zodiac.

What do rabbits do? They leap about and frolic in merriment. So naturally life to you is a gamble. One of my episodes of madness took place in a luxurious setting, on board the Queen Victoria and land excursions around the

Continued next page

Con't. from page 24

Mediterranean. The experiences I gained could fill a travelogue. They illustrate our worldviews as a world citizen. They serve to redirect attention from abnormality to the rich diversity of normality, in which madness may be embedded. More important, they demonstrate that spiritual journeys can indeed be playful.

YF: Life on board the Queen Victoria was anything but boring. One day, the captain broadcasted an announcement about security measures against terrorism, while crew members went around checking for hidden bombs. The announcement went something like this:

We take terrorist threats seriously…. So take note and report to the authorities if you see someone who looks suspicious, or if you see someone who does not look suspicious but has been seen in the company of people, among some of whom might have been seen together with someone who does look suspicious.

Upon hearing this, I blurted out, "Ridiculous!" Whereupon, an Englishman nearby was sufficiently amused to initiate conversation with me. I introduced myself as "Double-Oh-Seven"; he introduced himself as "Double-Oh -Six." Thus, both of us were working for Her Majesty's government, in search of potential terrorists on board.

Later, he introduced me to his wife. I ran into her over breakfast one morning but failed to recognize her. She was visibly peeved. I thought to myself, "Now you know what it's like not to be recognized by people who ought to have recognized you. I have had plenty of experiences of not being recognized, intentionally or unintentionally, by Westerners."

David: Ah, don't all Orientals look alike?

YF: Mentally settled a moment later, I took corrective action and went over to the table where she and her husband were sitting. I said to her husband, "007 reporting to 006." I then asked his wife not to take to heart behaviors natural to secret agents that probably look unnatural to normal people. This seemed to placate her. The English couple were curious about my occupation.

I said, "You mean besides being a secret Agent? You may ask me any question, to which I am bound to give a truthful answer. You have five guesses."

I did give truthful answers, but with nuances calculated to mislead. I talked about various occupations with authority, coupled with counter questions to suggest that I knew a lot more than I actually did.

David: This comes naturally to you after years of teaching practice: The art of teaching is not to conceal the teacher's ignorance, or to show his knowledge, but to demonstrate how knowledge may be generated through dialogue.

YF: The Englishman came close but missed the target. Finally, I told the couple that I was a professor of psychology.

His wife professed disbelief. She asked in a sarcastic tone, "You have a certificate to prove it?" She then took another good look at me and noticed the Gucci shoes I was wearing. "Ah, I believe you. Those expensive shoes befit a professor."

At that moment, I didn't know whether I was amused or vexed. I have seldom bought expensive items for myself. I bought the Gucci shoes so I could dance, not to impress people.

David: Apparently, the Chinese saying "Respect the person's attire, before respecting the person" is not confined to Chinese people. Such great regard for worldly concerns is symptomatic of spiritual emptiness. Sadly, to many, materialistic pursuits offer more attraction than spiritual quests.

YF: Nonetheless, I was very pleased to have met the English couple. Both thought that English was my mother tongue! For the first time in my life, I passed the test of being a native speaker. Nothing made me happier.

Another linguistic encounter was a surprise. After talking with a hairstylist for a while, I asked her what her native tongue was.

She replied, "English."

This answer instantly embarrassed me, for having possibly embarrassed her. Fortunately, she wasn't. She explained that, being Scottish, she was used to not being understood by the English. It took me a while to get used to her accent. I still remember the way she pronounced *but*, which sounded very strange to my ears. Accent was certainly no barrier to communication. I sensed that there was something troubling her.

After discovering that I was a psychologist, she wanted to talk with me about that something. We had a heart-to-heart talk for about thirty minutes and got to the bottom of it. It turned out that she was concerned about her relationship with her boyfriend's mother, who she felt was rather possessive of her son.

David: So the classic antipathy between mothers-in-law and daughters-in-law is not unique to the Chinese.

YF: I felt gratified that we had both transcended our backgrounds. Indeed, kindred souls countenance no linguistic or cultural barriers to communication.

Con't. from page 25

Displayed inside the ship's gallery were photographs of passengers dressed in utmost elegance. A Chinese couple was looking at some of the photographs, and the lady aimed her camera at one. A staff member dashed in front of the couple and bawled out a pointed threat with an Australian accent: "These photos are copyrighted. If I see you doing this again, I'm going to confiscate your camera."

David: Typical Western active-aggressiveness!

YF: She had a build that dwarfed the Chinese lady. Standing nearby, I could imagine how the Chinese woman reacted, and I approached her to see if I could help. She explained that she didn't really intend to take a photograph of the photograph on display. I said that I would talk with the staff member concerned. In a typical Chinese fashion, she said, "Never mind."

I saw an opportunity to be an agent of intercultural understanding in action. In a typically atypical Chinese fashion, I approached the staff member and relayed to her what the Chinese lady said.

The staff member explained: "You know, some people actually steal photographs from the gallery. We have to protect our copyrights."

I replied, "I understand. However, the couple feel offended. You could have explained to them in a nicer way."

She then went over to the couple and apologized for her ill manners. Later, I talked to some Chinese passengers about the incident.

One reacted: "I'll intentionally take photographs of photographs in the gallery, just to vex them."

I thought to myself: Typical Chinese passive-aggressiveness! I was witness and intervener to numerous similar incidents of intercultural strain during the entire cruise. Neither Eastern nor Western I had found myself but a supracultural agent of understanding.

David: So you treated the Queen Victoria as a perfect place for conducting field research on intercultural communication, organizational behavior, customer relations, and so forth.

YF: Too busy enjoying myself, I did nothing by design. Still, a generalization forced its way into my scientific consciousness: There was an inverse relation between status and friendliness or pleasantness among the staff.

The high-status staff were typically European and fluent speakers of English. Some displayed condescending attitudes toward passengers who didn't speak English.

The low-status staff came from the Philippines, India, or other third-world countries. Some had substandard proficiency in English. One waiter asked, for instance, "Are you all right?"

David: When what he meant was, "Is the food all right?"

YF: I discovered to my amazement, however, that those who came from Mauritius were articulate in multiple languages, although they had completed only secondary education. This would put Hong Kong to shame.

I found out that the low-status staff were not as well paid as one would imagine. This meant that I had paid less for the cruise on their account. Almost without exception, they were helpful and friendly. To repay them in a small measure, I would hoard chocolates given only to passengers and redistribute them among the staff. They showed grateful delight, far beyond the chocolates' value.

David: Without loving actions in the concrete, talks of universal love in the abstract sound hollow.

YF: Part of the cruise involved land excursions in Egypt and Italy. I visited the world renowned Library of Alexandria, where I saw groups of Egyptian schoolchildren on tour with their teachers. Like schoolchildren elsewhere, they were fun-loving, noisy, and not as attentive as demanded. Their teachers, mostly men, watched over them like hawks over chickens. They had no hesitation in delivering a hefty blow to the head of a child whom they considered to be out of line.

I followed the children around for a while. Occasionally, I caught their attention by making funny faces to reflect how scary the teachers were. They were greatly amused.

David: You had to be cautious, for nothing would infuriate teachers, in Egypt or elsewhere, more than someone who succeeded in distracting students from the crutch of their authority.

YF: In Italy, I saw an entirely different pattern of teacher-student relationships. Groups of schoolchildren were led by their teachers around to tour galleries and museums. The children were jovial and showed no fear of their teachers. I saw students and teachers joking around together, enjoying each other's company.

David: All your life, you have had a special interest in the socialization of children in different cultures. Here was socialization observed in person. You have often said: The destiny of a nation is conditioned by the manner in which its children are socialized. Remember, even as a child, you thought that traditional Chinese upbringing "produces enslaved nations."

Continued next page

Con't. from page 26

YF: I saw busloads of tourists on their way to the Egyptian Museum in Cairo. Most of them seemed to show more interest in Egypt's antiquity than in its modern history, more fascination with dead mummies than with the living. Few showed understanding of, let alone empathy toward, life outside the museum.

I noticed, however, that the squalid conditions under which teeming masses of people lived did not seem to have taken the spirit out of them. Everywhere I went, people responded cheerfully to gestures of goodwill. I asked someone to write down on a piece of paper the equivalent of "Greetings, and thank you for your help" in Egyptian Arabic. All I had to do was to show it to people around when I got lost (sometimes in pretense) and they would come to my aid.

David: That piece of paper is a passport to pleasant and meaningful intercultural interactions. Serendipitous encounters tend to be the most interesting when you travel in another country.

YF: Inside the museum, I took a special interest in the death mask of King Tutankhamun, particularly the hieroglyphics inscribed on it.

A young Egyptian woman appeared unexpectedly and asked, "Would you like some help?" It turned out she was a university student majoring in history. She could read the hieroglyphics, which she translated into English for my benefit! She then took my hand and gave me a personal guided tour around the museum. Pointing to a statue of a cat, she explained that it was crying with tears because it wanted another "man." Perplexed, I endeavored to discover the mystery behind such feline desire. It then dawned on me that she meant "meal."

Her name was Amany. Her stature was as diminutive as her charm was immense. Her head was covered with a hijab, which did nothing to conceal her facial expressiveness. Her large, enchanting eyes, like a pair of black pearls, would move even the most unmovable Bodhisattva. She taught me to write my name in hieroglyphics, and I showed her how to write hers in Chinese.

When it was time to depart, I took out a banknote of twenty euros and gave it to her. She asked me to write my Chinese name on it, which I did.

"I will treasure this for the rest of my life," she said. At that moment, I felt what began as a casual contact had turned into a communion between two ancient civilizations, of which we were ambassadors.

David: A woman in a Muslim country taking initiative to approach a man in public? And taking his hand to go around? This defies the stereotype of heterosexual relations in Muslim societies.

YF: I remember my visit years ago to Mindanao State University in the Autonomous Region in Muslim Mindanao of the Philippines. On the way there, my travel companion, a Christian, warned me repeatedly: "Don't ever touch any woman, not even accidentally. Otherwise, dire consequences will follow!"
However, Amany showed no unease and must have felt that her behavior was perfectly acceptable. As a matter of fact, nobody around paid much attention to our interaction. She provided a living demonstration of how misleading stereotypes can be.

David: The Muslim world is not monolithic. It is far more heterogeneous than is acknowledged by most outsiders.

YF: More fundamentally, my past encounters in diverse cultures give me little or no reason to be surprised: Everywhere, women governed by strict codes of conduct will, nonetheless, find ways to express their humanity.

David: Manuals in the form of do's and don'ts written for tourists often perform a disservice: They reinforce common ethnic or cultural stereotypes and put tourists too much on guard. Now you have published many scholarly papers on transcultural psychology. Are you guided by your extensive knowledge of how people from different cultures interact when you travel to foreign lands?

YF: Having traveled around the world three times, I can say that attitude matters much more than academic knowledge. People all over the world appreciate gestures of good will. Ultimately, I have only one basic principle: Be yourself, whether you are living in your own country or traveling abroad.

David: Are you saying, in effect, that there is no distinction to be made between traveling as a tourist for pleasure and traveling as a pilgrim for spiritual fulfillment? If so, you have taken a radical stance, in conformity with your identity as a world citizen.

But "be yourself" also means being occasionally mad. Did you scare anyone around the Mediterranean?

YF: Being myself, I was playful. Not surprisingly, my playfulness was amplified by a measure of madness. Significantly, none of the people I interacted with thought I was mad. So, it is possible to control or conceal my madness during episodes.

A LETTER FROM THE PAST

From: Bruce.Bain@(Bruce Bain)
Subject: 1998

Dear friends,

On New Year's Eve '97, at the midnight minute, Bruce and Agnes were on a dance floor, on a ship, in the Straits of Malacca, hugging and kissing, doing all those wonderfully silly things one does at the auspicious hour. Set civilization stamps out primitive ritual?

We were on sabbatical, Agnes for the first time, Bruce for the umpteenth time, and the start of a long shared dream of traveling together around the world. Joining us on the cruise from Singapore to Puket was Parisian friend Marlene Dolitsky, and her son Dexter—a child, who, at his best, is a great and endearing boy, and in other times, well, Golding must have had the other times in mind when he wrote Lord of the Flies. The best will win out, we're sure.

Puket was sad: so much natural beauty, so much human potential being wasted, so many young Thai girls and boys in the sex trade, catering mostly to drunken Germans, Japanese, and Australians. The Asian economic meltdown has hit Thailand so hard that this business is the only recourse for so many. When and by what means does this sickness end?

While on a cruise, we met three ladies from Singapore, and the mom of two of them, and became good friends. This is interesting, because some years ago, at Versailles, we met three other young ladies from Malta, and became enduring friends. What is it Jung said about synchronicity and serendipity? Jung seems intuitively right and empirically wrong about many things. Agnes appreciates his mystical insights. Bruce is less sure. But who can argue with Jung and Agnes?

January and February were spent mostly in Singapore, visiting profs at the National Institute of Education. It was a productive time. Bruce completed a number of manuscripts, and Agnes wrote some and met many informed people in the Singaporean school psychology fields. Singapore has good feng shui for Bruce and Agnes.

Side trips were made to Malacca, a handsome, sedate, and historic place; and to Bali, which has the most and unpleasant hawkers we ever encountered. Mahathir, the Malaysian President and self-appointed Messiah, was (and is still) railing against foreigners (which seemed to be anyone who disagrees with him), and Suharto, the Indonesian President and self-appointed Messiah (since replaced by his deputy Messiah Habibi) was (and still is) railing against foreigners (which seemed to be ethnic Chinese, and anyone who disagrees with him/them). Singapore was/is a calm island sea. One holds otherwise, but suspects contrarily that the storm is not over.

A short family-and-friends visit to Hong Kong rounded out the Asian part of the sabbatical. One of the essays Bruce wrote is, The renaissance of psychology in Hong Kong, which is now published in the bulletin of the Hong Kong Psychological Society, 1997, 38/39, pp 149/162. On a slow night, over a sherry or two or three you may wish to read it.

Then, it was on to South Africa, Johannesburg, visiting professors at Rand Afrikaans University, for the month of March. Jacobus and Susann Kok greeted us and treated us like long-lost cousins — a feeling that was spontaneously mutual. RAU colleagues were equally effusive in their concern for our well-being. During the week, Bruce was busy writing and occasionally lecturing; and Agnes was busy writing and visiting schools around Johannesburg. The weekends were something else.

One weekend, the Kok's took us to their farm near Witburg for a weekend of sightseeing, food, drink and chat with a cast of engaging friends. Another weekends they took us to Margate, a country cottage town on the Indian Ocean, south of Durban, where we walked on the beach, visited an alligator farm, and eats like Epicureans. The third weekend we went to Kruger National Park, one of the world's great sites: lions, elephants, zebras, baboons, all manner of birds, hippos, giraffes, one leopard; the only big game animal we did not see was the rhinoceros.

The fourth and final weekend was a trip to Cape Town by train, and back by plane. Cape Town is truly spectacular: Table Top Mountain, Cape of Good Hope, a dramatic harbor, Robben Island, long sweeping beaches, fascinating houses clinging to mountainsides, and food worthy of the gods. South Africa possesses some of the most dramatic scenery in the world. Every turn in the road or twist of thetrain seemed to bring with it another breathtaking scene. We used up eighteen rolls of film in South Africa alone!

The magic moment of our South African sojourn was an evening visit to Pretoria, with the Koks of course, to see/experience the opera Rigoletto, one of our favorites, followed by a visit to a planetarium, on a farm east of Pretoria, operated by a group of fellow amateur astrophysicists (stargazers to the uninitiated; Peeping Toms to the cruel). To our surprise, like the earthly Agnes, the celestial Agnes is a twin! Joan seems right on, again. Nine months later we still talk about it and likely will for the rest of our

Continued next page

Con't. from page 28
lives. It was evident that South Africa is having serious civil, political, and economic problems. It was also evident that, if people like the Koks and others with a similar moral compass are given a chance to help guide the future, South Africa will find a harmonious path to the promised land.

The promised land of Israel was our next stop. A Canadian proverb has it that Canadians have roots in two cities, Paris and their own; and in two nations, Israel and their own. It was like stepping into part of our collective past to actually see the Galilee, the Jordan River, the hills of Judea, Caesaria, the Dead Sea, Masada, and of course, Jerusalem. And Passover and Easter in the holy land as well!

The first week we stayed with old friends, Roberta and Noach Milgram, who live near Tel Aviv. They took us on a grand tour of Israel, from the church of the Beatitudes on the shores of the Galilee, to the source of the Jordan River which, surprisingly, is freezing cold, to Vad Mordecai.

The next two weeks were centered in Jerusalem, guests of Bruce's former student and loving friend, Sam Hazanovitz, and his new scriptwriter wife, Hadas.

No sooner had we settled in than the four of us were off to Istanbul to see the sights: the Topaki Palace, the Blue Mosque, the Golden Horn, Asian and Western Istanbul, the Grand Bazaar. Istanbul is a surprisingly easy place to get around. The airport is a nightmare. But the Turks on the street are helpful. We left wanting to see more, and promising ourselves that one day we will return.

Back in Jerusalem, we visited all the historical sites in the old city: the Western Wall, the Church of the Holy Sepulchre, the El Aksa Mosque and the Mosque of the Golden Dome, the Way of the Cross, and scores of churches and synagogues. Bruce "prayed" at the Western Wall. He solemnly uttered "quaequmque vera" and "Lotto 649." "Whatsoever be true" likely will be, but Bruce is yet to win the lotto.

In the old city we found that Judaism, Christianity, Islam have a strong common root: ripping off the tourist. We're not sure why this surprised us. We've seen " holy places" of all denominations and scores of sites around the world; yet, we were. We seemed uncontrollably to hold a higher standard for this holy place and for the others — Jerusalem does that one.

We also felt sorry for believers of a gentle spirit for whom the old city must be a disappointment. The good Jew, Christian, or Muslim must be appalled by all the crass larceny. But if one can hold one's nose about the vulgar commercialism surrounding the holy sites, and if one can ignore the intolerant few of all three faiths, the Old City is a wondrous place. Our own philosophy of life is to carry Jerusalem around in our hearts. But the geo-political-physical Old City of Jerusalem captures the imagination directly.

Avi and Sara Habinski, friends from Edmonton, expatriot Israelis, on sabbatical in Israel, took us to Masada, the Dead Sea, and scores of fascinating places that only the seem to know. The pictures of us covered with Dead Sea mud is a sight worthy of Punch

Banff and Jasper overwhelm with their eternal beauty. Harris puts one in touch with romance and, in a sardonic way, reason. But Israel is alive with some indefinable essence. And the falafel is great! Again Jung would understand.

Before going to Israel we knew of the protracted turmoil — who doesn't? But we worry because we know and love some of its potential victims.

From Israel we went to New York, one of our favorite places, for a couple of weeks of theater, sightseeing, shopping, visiting friends Selma Sapir and Kate Greene, and just winding down (or is it up) before getting back home, and back to work. Bruce, back to supervising graduate students, teaching large classes, researching and writing; and, Agnes, back to the schools and problem learners. Agnes has the more difficult job.

In July, Bruce went on his own to the International Council of Psychologists convention in Melbourne, where, after three sometimes-tumultuous years at the "high table" he stepped down as Past President. ICP is one of Bruce's passions, it's not up there with opera or food or hockey, but a passion nonetheless. Unlike most psychology associations, this one has real feeling and caring if sometimes erratic people in it. The feeling and caring make it worthwhile.

After Melbourne, back to Singapore to help out the National Institute of Education with their new applied psychology program. And then back home sweet home to be greeted by a nephew, Paul, and his new bride, Rebecca, and Paul's mom, Margaret, Agnes' sister, visiting from Adelaide. We took them to (where else) to Jasper and Banff – our holy places. We had a family reunion, with family arriving from Adelaide, Houston, Vancouver, to celebrate Agnes' mother's eightieth birthday, a moving event for a grand lady.

Politics in Canada was normal in nineteen ninety-eight. The federal government governed by not governing. The provincial governments governed by appealing to the federal government to government, according to each province is provincial agenda. The provincial election in

Continued next page

Con't. from page 29

Québec produced characteristic Canadian answers: the Parti Quebecois (the separatist party) won 43% of the popular vote, and won 78 seats; the Liberal Party (the non-separatist party) won 47% of the popular vote and won 32 seats; the other small parties (Marxist-Leninists, Action Quebec, The Rhinoceros, The Green Party, etc.) won 10% of the popular vote and 1 seat (for Action Quebec.) And again the United Nations voted character as the most desirable country in the world in which to live. Are we missing something?

On the health front, Agnes is, as always, in good shape. Bruce, well, good health is not part of Bruce's karma.

His MS has reached a favorable remission point (score one for Bruce) such that, after seventeen years, he was taken off of steroids. But, as we found out, withdrawal from prolonged steroid use is something like withdrawal from alcoholism. It did odd things to Bruce's mind (such as it is) and body (such as it is). May to September was the worst: dizziness, disorientation, weight gain, heart palpitations, reflux, and wild and erratic mood swings. All this was to be expected Bruce was told by his neurologists. But between expectation and reality were many anxious moments. The withdrawal screaming-meemies seem to be over, we hope. Though now Bruce has tinnitus symptoms!

The nineteen ninety-eight New Year's Eve will be less spectacular than nineteen ninety-seven's. We are off to a warm family new year in damp and chilly Vancouver, where, at the midnight minute, we will drink a heartfelt toast — to each of you.

In ending the '98 year-end tour d'horizon, we would like to share a poem that captures our evolving sense of ourselves at this stage of our lives:

A Prince said, "A painted rice cake does not satisfy hunger."

A Buddha replied, "There are a few who have even seen this 'painting of a rice cake' and none of them has thoroughly understood it.

"The paints for painting rice cakes are the same as those used for painting mountains and waters. If you say the paintings are not real, then the material phenomena world is not real, the Dharma is not real.

"Unsurpassed enlightenment is a painting. The entire phenomenal universe and the empty sky are nothing but a painting.

"Since this is so, there is no remedy for satisfying hunger other than a painted rice cake. Without painted hunger you never become a true person."

May there be a painted rice cake in your New Year.

Be well, Bruce and Agnes, and Suki

Looking Forward

The following suggestions made by Past President Tara Pir during her By Laws review were presented to the ICP, Inc. Board of Directors at the 2015 Annual Board Meeting in Toronto, Canada on August 3, 2015. Member comments welcome. Email Dr. Florence Denmark at: fdemark@pace.edu and copy Dr. Ann Marie O'Roark at: annoroark@bellsouth.net. Thank you.

ARTICLE 1. CERTIFICATE OF INCORPORATION
CONNECTICUT CERTIFICATE OF INCORPORTATION

1.1 The name of the corporation is the International Council of Psychologists, Inc.
Proposed name change to "International Council of Psychologists & Allied Professionals." (TP)

1.2 The duration of said corporation is unlimited.

1.3 The International Council of Psychologists, Inc. is a nonprofit corporation, governed by the bylaws, organized exclusively for educational and scientific purposes. Its purpose is to advance psychology and the application of its scientific findings throughout the world.

1.4 The Board of Directors consists of the Officers and Directors-at-Large of the Board of Directors, elected in accordance with the Bylaws.

1.5 The officers are the President, President-Elect, Past President, Secretary, and Treasurer, all of whom are elected from Members of the International Council of Psychologists, Inc. in accordance with the Bylaws.

1.6 A meeting of the Board of Directors and a general membership meeting both will occur at ~~the International Council of Psychologists, Inc. Convention site~~ annually(TP). The Board of Directors may hold additional meetings as needed either in a single location or viaelectronic means.

1.7 No part of the Council's income is distributed to its members, directors, or officers, and the Council shall not have to issue shares of stock or pay dividends.

1.8 Upon the dissolution or other termination of the Council, the Board of Directors will select another organization dedicated to educational or scientific purposes in the field of psychology, to which to

Continued next page

transfer such assets as remain after the payment of

Con't. from page 30

all liabilities.

ARTICLE 2. MEMBERSHIP

2.1 ~~Types of Membership~~. There are two ~~classes~~ categories of membership: Individual and Organizational. Individual Members include Allied Members and Student Affiliates. (TP)

2.2 Members are health, mental health professionals, ~~and~~ social scientists, and others from diverse helping professions (e.g., attorneys, physicians, chiropractors) from both traditional and nontraditional practices (TP) who (a) hold or are eligible to hold membership in their discipline related national professional association,and (b) have been actively engaged for a period of not less than two years, prior toapplication for membership, in professional work or study that advances the science andpractice of psychology and supports the use of psychological, health, and other helping professional (TP) knowledge to promote socialhealth and justice globally. This is consistent with the ICP Mission.

2.3 Student Affiliates are graduate students enrolled in an academic program leading to an advanced degree in psychology or in an allied ~~mental health~~ helping profession or social science.

2.3.5 Organizational Members are academic and other service organizations that share the mission of ICP. Member organizations and ICP make a commitment to mutually promote the mission of the respective organizations in their networking contexts, inclusive of websites, conventions, conferences, etc. Each organization would identify a Liaison to represent the organizational member at ICP and provide status reports on an annual basis of their activities. (TP)

2.4 Privileges and Benefits of Members.

Full Members in good standing, inclusive of allied members, (TP) are entitled to:

2.4.1 Vote in all member elections and on all propositions submitted to the membership

2.4.2 Receive regularly issued publications free of charge; receive discounts on other publications or on registration fees as may be established by the Board

2.4.3 Hold elective or appointive office, and receive other privileges granted by theBoard or specified in the Bylaws.

2.4.4 Student Affiliates receive all the privileges of Members, except the rights to v~~ote and h~~old elective office.

2.5 Applications for Membership. Each must be submitted with first year dues and are reviewed by the Membership Committee for recommendation to the Board of Directors for membership status approval.

2.6 ~~Resignation, Termination and Reinstatement of Membership~~. Termination of membership occurs under the following conditions: (1) for nonpayment of dues; (2) for unethical practice or unprofessional behavior, or conduct reflecting unfavorably upon the association or scientific psychology.

2.7 Reinstatement of a former member whose resignation had previously been accepted, or who has been terminated, is considered by the membership Committee. Upon receipt of the reinstatement request, submission of a new application for membership and the payment of dues, the Membership Committee shall act upon the request.

2.8 Members may not act as a representative or agent of the International Council of Psychologists, Inc. without specific, written authorization by the President or as specifiedin these Bylaws.

ARTICLE 3. EXECUTIVE COMMITTEE & BOARD OF DIRECTORS

3.1 The Board of Directors consists of five Officers comprising the Executive Committee and 6 six (TP) Directors-at-Large. The President, President-Elect, Past-President, Secretary and Treasurer comprise the Executive Committee of the association.

3.2 The President is the executive-in-charge of management and leadership of the association and has just completed an elected term as President-Elect. Following the Presidential ~~year~~term, this officer serves as Past President in the next term. (The term is presently two years. There is a motion before the Board to change this to a one-year term.) (TP)

3.3 The Secretary and Treasurer are elected for terms of three years. The Secretary and Treasurer are elected in different years so their terms are overlapping but not identical years. The Secretary and Treasurer can serve consecutive terms.

3.4 Board members are elected annually from a slate of candidates who have agreed to be nomi-

Continued next page

Con't. from page 31

3.5 Two Directors-at-Large of the Board are elected each year to serve three-year terms.

3.6 Board members are installed during the outgoing Board meeting that follows their election. They serve until successors are duly elected and installed, or are replaced byappointment by the President after being absent for two consecutive board meetings.

3.7 Board Meetings

3.7.1 It is mandatory that elected Officers of the Board of ICP attend two annual Board Meetings, either in person or electronically. ~~The Outgoing Board session is scheduled for a day and a half prior to the opening of the convention.~~ Board Members are required to correspond, communicate, and respond to email on an ongoing basis.

3.7.2 Both the Outgoing Board session and the Incoming Board session may or may not be scheduled to occur in conjunction with our annual Convention (TP), as determined by the Board of Directors. The Incoming Board session is scheduled following the outgoing Board and Membership Meeting, but within the convention period. ~~The Incoming Board session is scheduled following the outgoing Board and the Membership Meeting, but within the convention period. When business before the Incoming Board is completed, the Board adjourns sine die.~~

3.8 ~~Additional~~ Special meetings of the Board may be called at any time at the discretion of the President with the concurrence of at least ~~four~~ two (TP) members of the Board Directors. Formal notice of a Special Meeting must state~~s~~ its purpose and only business related to that purpose should be transacted at that Special Meeting.

3.9 Open Board Meetings. Members of ICP are encouraged to attend Board Meetings as observers. Observers do not speak except upon specific invitation of the President. Meetings are to be held in rooms of a size to accommodate observers.

3.10 Quorum. Decisions at meetings of the Board are made by majority vote of the Directors present and voting. No policy or action can be approved that could endangerICP's status as a : Non-profit 501(c)3 educational organization recognized by the Internal Revenue Service of the United States of America.

3.11 The Executive Committee of the Board consists of the five elected officers. They are responsible for conducting the business of the association between regular Board meetings.

3.12 Each officer prepares an Annual Report to the Board in advance of the Annual Board Meeting in time for inclusion in the Annual Board Agenda Book.

3.13 The Board of Directors amends Board Rules as needed, submits changes in bylaws, incorporation, or policies for membership vote, assures conduct of Board and Membership meetings in accord with Robert's Rules of Order, and ensures that AP&P procedures and rules are followed by officers, committees, agents, delegates, and staff except that, where there is a conflict between either Robert's Rules of Order or AP&P procedures and ICP's Bylaws, the latter will control. (TP)

3.14 The Board reviews, amends, and approves the annual operating budget presented by the Treasurer for the coming calendar year.

3.15 The Board receives and approves Convention proposals [sites, dates, hotel, budget projections,]

3.16 The Board reviews proposals for regional meetings, inter-convention workshops, other area chair meetings, and authorizes the President to appoint *ad hoc* ~~ad hoc~~ committees as deemednecessary. The Board may establish or eliminate *ad hoc* committees as necessary. (TP)

3.17 The President is Chief Executive Officer and Chairman of the Board for the International Council of Psychologists, Inc.

3.18 The President Elect [PE] assumes duties of President in the event of the latter's absence, resignation, or inability to perform the duties of office.

3.19 The Past President [PP] manages the Nomination and Election (N&E) process.

3.20 The Secretary is responsible for the preparation of all minutes of Board meetings, Executive Committee meetings/issues dialogues/votes, and Annual Membership Business Meetings. As required by federal and state incorporation regulations, the Secretary signs or cosigns official correspondence, resolutions and documents with the President or other designated agents of the association.

3.21 The Treasurer has primary fiduciary responsibility for ICP financial operations, presents accounting reports and operating budgets to the Board, reviews ~~conference~~Convention (TP)

Continued next page

Con't. from page 32

budgets and manages reserve funds.

3.22 The Board of Directors functions in conformity with the Certificate of Incorporation, the By-laws, Board Rules, and ~~Council~~ ICP (TP) Policies.

3.23 The responsibilities of Board as a whole include: monitoring and oversight of the work of ICP ~~the Council~~ (TP); determining general policies, making and amending rules for the conductof governance meetings, procedures established for ICP ~~Council~~ (TP) programs and activities, and procedures established to guide officers, committees, agents, delegates, and staff; and forsubmission of an annual report to the President andBoard.

3.24 The Board reviews and approves the association's annual operating budget, investments, and annual accounting reports, IRS reports, and convention hosting proposalsand budgets.

3.25 Each Board member keeps a current record of procedures and a compilation of the papers of the office, which are transferred to the successor in the role.

3.26 ~~The Board may establish or eliminate ad hoc committees as necessary.~~ (moved to 3.16.) (TP)

ARTICLE 4. CENTRAL OFFICE OR SECRETARIAT

4.1 The Board may establish a central office or Secretariat to support the mission of the association by supporting elected Board members and appointed leaders in the conduct oftheir duties.

4.2 A central office may serve as the clearing house for communications and information exchange.

4.3 The manager of the central office is responsible directly to the ~~President~~ Executive Committee. (TP).

ARTICLE 5. STANDING COMMITTEES AND WORKGROUPS

5.1 The Standing Committees of ICP are: Archives; Area Chairs; Continuing Education; Finance Committee; ~~Conference~~ Convention (TP) Long Range Planning Committee; Nominations & Elections, and United Nations Committee. Standing committee chairs are appointed by thePresident to three year renewable terms and presented for Board approval at the IncomingBoard meeting.

~~8.2 10~~.5.2 (TP) Working Groups and Task Forces include Professional Concerns; Liaisons; Bylaws; and Policies and Procedures Updating.

ARTICLE 6. CONVENTIONS AND MEETINGS

6.1 A convention is held annually, unless ~~prevented by natural disaster, war, or decision of~~ decided by the Board. ICP Conventions may not be limited to an annual convention. Through collaboration and sponsorship with organizational members from many parts of the world, ICP may conduct as many regional Conventions (TP) throughout the year in order to create opportunities for our world members to attend one or as many as they choose. (TP)

6.2 The annual convention may include some or all of the following: Board Meetings; a Membership Business Meeting; a Scientific Program, professional development and Continuing Education.

6.3 The annual convention schedule is developed under the leadership of a ConventionArrangements and Program Chair, appointed by the President-Elect, who chairs the Annual ~~Conference~~ Convention (TP) Working Group with the support of the Local Arrangements Chair and ~~Conference~~ Convention (TP) Long-Range PlanningCommittee.

6.4 Annual Convention, Regional and Ancillary or Embedded program proposals are presented to the President, Long Range ~~Conference~~ Convention (TP) Planning Chair, and Treasurer for review and authorizations.

ARTICLE 7. FISCAL YEAR, DUES, AND DONATIONS

7.1 The ICP fiscal year is the calendar year.

7.2 Annual dues are determined and approved by the Board and solicited on a calendar year basis.

7.3 Donations or contributions are accepted, recognized and acknowledged with the non-profit laws and rules.

ARTICLE 8. COMMUNICATIONS AND PUBLICATIONS

8.1 The International Psychologist (IP) is the official newsletter for ~~the Council~~ ICP. (TP)

8.2 The IP newsletter is disseminated quarterly ~~three times a year~~ with supplements as authorized by the President.

8.3 The ICP Journal [WORLD PSYCHOLOGY], Membership Directory & Leaders Guide are prepared, published and disseminated as authorized by the Board

8.4 ICP's Annual Convention Proceedings are published as feasible.

Continued next page

Con't. from page 33

8.5 ICPweb.org is the official internet website for ~~the Council~~ ICP.

8.6 ICP will develop a LISTSERV and email addresses associated with ICP's website. (See my motion.) (TP)

ARTICLE 9. AMENDMENTS

9.1 The ~~Council~~ ICP (TP)Board of Directors may submit for membership vote amendments to the Bylaws that are consistent with ICP's ~~the Council's~~ Certificate of Incorporation, which are ~~and~~ (TP) deemed necessary for the efficient management of the affairs of ~~the Council~~ICP.

9.2 Adoption of amendments is determined by a majority vote of those members voting.

9.3 Amendments to the Bylaws may be proposed by any member of the ~~Council~~ Board of Directors.

9.4 Votes of the membership are conducted under confidentiality conditions and may be executed through either print or electronic means.

9.5 Proposed changes to Certificate of Incorporation or Federal Tax Exemption status are reviewed and approved by the certifying agencies prior to submission for membershipvoting.

* * * * * *

Notes on changes:

1. Recommended deletions are identified by strike-out (~~Example~~).
2. Recommended additions are identified by red type (Example).
3. Paragraph 2.1. there is repetition
4. Paragraph 2.2. is self explanatory
5. Paragraph 2.4 the word Full is redundant
6. Paragraph 2.5 Correction of plurality. By deleting 'each' and combining the two statements it reads easier.
7. Paragraph 2.6 This is redundant as it goes on to explain each category independently.
8. Paragraph 3.1 **Nine** has been changed to **six** as it is believed that for the current size of ICP six is sufficient. Additionally it has the advantage of making decisions easier and in less time along with alleviating the need to find so many willing to serve asboard members. With the current size of ICP having one board member for every ten or so people is viewed as unwieldy and unnecessary.
9. Paragraph 3.2 Since the President Elect is by definition the next president, stating that the term follows the term of President Elect is viewed as redundant.
10. Paragraph 3.3 While it is nice to have the Secretary and Treasurer re-elected, past history would suggest that consecutive terms is not only advisable but practical.
11. Paragraph 3.5 by electing two each year instead of four there will be a naturalattrition from the current level to the recommended level over the next years with everyone currently in position able to finish their term of office.
12. Paragraph 3.8 Additional changed to 'Special' to conform to the rest of the paragraph.
13. Paragraph 3.8 the addition of must requires inclusion of purpose and the deletion of the 's' is to match plurality.
14. Paragraph 5.2 Numbers were changed to maintain continuity as it appears thoseparagraphs were copied over from another source. The insertion of 'include' is stylistic in that it helps the paragraph read easier.
15. Paragraph 6.1 Since the Board will ultimately make the decision, and since a Board Meeting does not really qualify for a conference, "prevented by natural disaster, war, or decision of" is replaced with "decided by".
16. Paragraph 8.2 It is recommended that the IP come out three times a year as it is already in the by-laws that supplements can be made. Also, there is historically difficulty in getting articles or meeting deadlines for the IP.
17. Paragraph 9.2 The addition of, "of those members voting" precludes the argument that a decision was made by few if only a few choose to vote.
18. Paragraph 9.3 The term "Council" is redundant.
19. Paragraph 9.4 The 'ity' deleted, as confidential is an adverb describing the conditions
20. The AP&P are generally contained within the current by-laws. Since the by-laws state that all decisions are made by the Board or the President, the manner in which those decisions are made will generally be determined at that time by the President or Board respectively. When ICP was larger and more people were involved in the decision process, there was a need for the AP&P. A perusal of the AP&P would suggest that most of the contents are either repeating the by-laws or are common sense. Additionally, each major sub-committee answers to the Board so decisions made within those committees are overseen by the Board and any discrepancy or alteration in form can be discussed and determined or corrected at that time. Finally, those currently active in ICP have demonstrated a strong commitment to the organization and it is unlikely that they would attempt to function in a way inconsistent with the goals or interests of ICP. Therefore it is recommended that the AP&P be retired and the organization function on a less structured basis.

UPDATES REGARDING THE 2016 74th ICP, INC. ANNUAL CONFERENCE and BOARD MEETING

MACHIKO FUKUHARA,
PhD, JAPAN
Local Area Chair, Scientific Chair,
President-Elect

Since I wrote the P-E Column for IP55.4, one month has already passed. At the beginning of this New Year, I pray for peace in the world and for all peoples' well-being.

The 74th annual conference, ICP, Inc., Yokohama, is coming closer. With the LAC, I am working very hard on the preparation so that it will be an exciting and informative event for all of the participants. A draft of the entire program for the Conference has just been completed.

We are receiving Proposals for Presentations for symposia and papers. Together with those of the invited speakers, we have many responses from people who wish to contribute to the sessions. The diversity of their academic interests tells us that our Association's philosophy of multicultural and interdisciplinary approach to human beings is resulting in a wide interest among our participants.

I wish to thank those who have applied and I am encouraged by your interest in our Association. We still encourage your participation in the Workshop (during the afternoon of the 22nd), and the Conversation Hour (on the afternoon of the 25th). These sessions are planned especially for early career scholars and practitioners, including those from both underdeveloped and developed countries. We would like to encourage an exchange of scholarly discussions and friendship on an international level. This is one of the features of this Conference. We welcome you!

Blessings to you for your well-being,
Machiko Fukuhara, Ph.D.
P-E and Chair, Local Arrangement Committee

(For more information, please contact the Tokyo Office, ICP, Inc. at icpinc.tky-office16@nifty.com). Also, we encourage you to apply for Poster and Inabsentia Poster presentations, (For these, please contact one of the following annoroark@bellsouth.net or annalaura.comunian@uipd.it).

HOW TO REGISTER FOR THE JAPAN CONFERENCE(S) & HOTEL

Those attending **both** ICP2016 and ICP, Inc. are allowed to pay ONE registration fee to cover both. [Registration rates will vary with registration period. Also, check exchange rates at time of payment for accurate conversion values.]

To register, open the ICP2016 home page [The ICP2016 website address is: http://www.icp2016.jp/] and complete your Registration. THEN, *email your ICP, Inc. registration form to Ms. Nancy Quatrano,* for participation in our conference. Nancy@OnTargetWords.com.The form is on our website. Click on DOWNLOAD REGISTRATION FORM under the Membership tab.

You can enjoy the entire program and social events (July 24-29) planned by the Congress (ICP2016). In addition, ICP, Inc. will have 2 rooms (for July 23-24) independent from ICP2016.

Those attending only the ICP, Inc. Conference (July 22-25) can participate in the cultural tours ICP2016 has planned by contacting Japan Tourist Bureau (JTB) at their venue desk and by paying the necessary fees.

Both ICP2016 and ICP, Inc. participants can book accommodations by contacting hotels contracted by JTB for reduced prices. They are listed at **the ICP2016 home page.** (You can open the ICP2016 Homepage and choose a hotel of your choice listed there.) http://www.icp2016.jp/accommodation.html You must make your own hotel arrangements.

Please do that as quickly as possible. The deadline is June 1, but rooms may sell out before that date.

We hope to see you there for this very exciting time!

Machiko Fukuhara, Ph.D.
P-E and Chair, Local Arrangement Committee

~CORRECTION~

In the International Understanding 55.2, the order of presenters was incorrect for one of the abstracts presented. Here is the correct information for that article:
2015: *Relationship Among Sense of Coherence, Gratitude and Well-Being,* Tomoko Fujitani, Ami Kojima, Dr. Yoshiko Kato
73rd Annual ICP, Inc. Conference, Toronto, Canada, Aug 1-3, 2015

NEW: PLEASE NOTE SPECIAL ARRANGEMENTS

International Council of Psychologists (ICP, Inc.)
74th Annual Conference
22-25 July 2016, Yokohama, Japan

Conference Theme: Psychology for World Equality, Access and Well-Being

Conference date

The 74th Annual Conference of the International Council of Psychologists (ICP Inc.) will be held on 22-25 July, 2016, in Yokohama, Japan. Don't miss this excellent opportunity to share ideas and to engage in face-to-face discussions with fellow colleagues! The International Congress of Psychology (ICP2016) will be held at the same place during and after our meeting, so there will be ample opportunities to meet psychologist colleagues from all over the world.

Conference venue

Pacifico Yokohama is one of the most distinguished convention centers in Japan. It is located in the waterfront of Yokohama Bay and consists of a Conference Center, an Exhibition Hall, a hotel and the National Convention Center of Yokohama. The buildings, modeled after a yacht sail and a shell, are impressive from both the sea and land sides.

Conference registration special

SPECIAL ARRANGEMENTS HAVE BEEN MADE FOR ATTENDANCE AT BOTH OF THESE CONFERENCES! If you will be attending both events, you will only pay *ONE FEE* for the two conferences. That must be done at the ICP2016 (Congress) website where you will indicate that you are attending both ICP2016 and ICP, Inc. Then notify Nancy Quatrano by email that you will be attending the 74th ICP, Inc. conference and send her your registration form, but do NOT pay any additional fee. *ALL HOTEL ARRANGEMENTS MUST BE MADE BY THE ATTENDEE.*

IF you are attending ONLY the 74th ICP, Inc. conference, you will complete your registration form and then you'll need to pay the appropriate fee at the ICP, Inc. website via the button provided there. That link is: ICPWEB.ORG

Country category	A	B & C
Membership category	US$	US$
Full member	300	200
Allied professionals – non member	350	350
Student		
Member	100	100
Non-member	130	130
Accompanying person	150	150
After June 1, 2016 (including On-site registration) Add $50.00		

Registration fees include admission to all scientific sessions, reception, tea breaks and conference material. For accompanying person, registration fees include admission to the reception.

DEADLINES TO REMEMBER:

JANUARY 15, 2016 – SCIENTIFIC PROPOSALS ARE DUE

JUNE 1, 2016 – REGULAR REGISTRATION FEES ARE DUE

Stop! Don't flip that electric switch!

Chronicling the experience of Ed English - Camera-man for Stanley Milgram's experiment

As cameraman and editor for Stanley Milgram's original documentary "Obedience," I have, over the years, come to believe that his experiment never attained the impact on society at large that it might have had. I suggest, in this personal comment, that it was too powerful to receive acceptance at a time when the authority of the government and military establishment were being challenged. The many comparisons of the study to the tragedy of the Holocaust overshadowed most applications of the study to the war in Vietnam. Sadly, the more sensational aspects of the study were emphasized, often out of context, except among an informed minority. My hope is that scholars will work to correct this for Milgram himself, the psychology profession, and the good of society.

Stop! Don't flip that switch!

By Edward English

Introduction

On August 28, 2013, I was surprised to hear a review on National Public Radio by Leonard Lopate of Gina Perry's book on Stanley Milgram's "Obedience" experiment. Serendipitously, the author requested an interview with me the next day. She did extensive research for her book, and, she was interested in speaking with me because I'm listed in the film credits of "Obedience", a documentary record of the Milgram experiment.

The title of Gina Perry's book "Behind the Shock Machine: The untold story of the notorious Milgram psychology experiments" (2013) indicates how the publisher may be trying to capitalize on the sensationalism that has undermined Milgram's powerful experiment through the years. The psychology profession has frequently debated the controversial ethical aspects of the experiment, thereby not encouraging further research except for "Milgram lite," (Burger, 2009; Elms, 2009). Ms. Perry told me that she had studied Milgram in her early psychology courses and was intrigued, as many other students were, with the set-up for the experiment.

In 1960, when I graduated from the free, public City College of New York, I was fortunate to land an assignment at the prestigious Yale University, to make Russian language training films for the US Office of Education. The University also gave me the opportunity to work with Stanley Milgram. He explained that the experiment he was conducting may expose the inherent dangers in blindly obeying authority. Publically, two subjects were recruited for the experiment to investigate if electric shock given as punishment can improve learning. The "leader" of the experiment asked the two subjects to draw slips of paper to decide who will be the "learner" and who will be the "teacher." The drawing was rigged so the newcomer was always the "teacher" and the actual "subject" of the experiment. The "learner" and the "leader" were both trained as confederates (acting according to Milgram's instructions). I understood the experiment was really designed to find out if, and how far the newcomer or "teacher/subject" was willing to follow orders from the "leader/actor" even when it seemed increasingly apparent that the "learner/actor" was experiencing pain. Predictions, prior to the actual experiment, even by psychiatrists, stated that only a pathological fringe of one or two percent would continue through to the maximum shock of 450 volts, (Milgram, 1973a). Astonishingly, the results of the experiment showed that almost half of the "teachers" across different experimental variations willingly inflicted electric shock punishment on the "learners," (Milgram, 1973a).

> Filming secretly over 50 years ago, behind a two-way mirror, I could not believe as I was zooming in on the faces of many of the "teachers", that they could conceivably flip to the next higher voltage switch to shock the poor "learner,".

Filming the 'subject' experience

Ms. Perry said she was greatly influenced by the 1975 CBS TV program, "The Tenth Level," featuring William Shatner playing Stanley Milgram. The film opened dramatically with a camera shot of a train transporting Jews to the gas chamber. Much later when she began her research and diligently interviewed all the participants in Milgram's experiment, she learned how deeply the subjects felt the shame of being compared on national television to people who allowed the atrocities of the Holocaust because they claimed to be just obeying orders. This raised serious doubts for her about Milgram's experiment that she detailed in her book.

I told Ms. Perry I was very grateful to her for explaining the plight of the participants to me. I had not thought of this specifically before and am deeply sympathetic to them. (I never saw the CBS TV version.) I still vividly remember many of the people she interviewed and I too have had troubling thoughts over the years but from a decidedly different perspective.

Filming secretly over 50 years ago, behind a two-way mirror, I could not believe as I was zooming in on the faces of many of the "teachers", that they could conceivably flip to the next higher voltage switch to shock the poor "learner". Their actions continued even after escalating calls from the 'learner' asking to stop, demanding to be let go, crying out in agony, pleadings because of a heart condition, to ultimately non-responsiveness. At this point only the sound of the switch being clicked at 450 volts was heard. And all this merely because of routine-sounding prompts to continue by a man in an off-white lab coat with a clip board who sat nonchalantly behind the "teachers."

This took place *after* I had filmed the "teachers" undergoing a slight shock themselves to feel what would be given to the "learner." Each "teacher" was asked to sit in an old-fashioned, wooden chair with flat arm supports. Some special electrode paste was applied to the arm that was to be shocked. It was explained that the paste would help to avoid blisters and burns. A mild shock was given and each subject said they definitely felt it. The leader told them it was only 45 volts. Casually, the "teachers" were given a paper towel to wipe their forearm and then led into an adjacent room in order to administer the test objectively apart from the "learner" who had been left strapped into what resembled an electric chair.

Continued on page 15

President's Column
Joan C. Chrisler, Ph.D.

It is difficult to believe that my presidential year is more than half over already! The time has flown by, but a lot has been accomplished. Here I will share some of the highlights with you.

Our energetic program chair, Maria del Pilar Grazioso, has put together a diverse and interesting set of papers, posters, symposia, and conversation hours for the Toronto APA convention. In addition, of course, we have invited addresses by last year's award winners, and several other invited addresses and invited panels. She and her team of student assistants are at work now planning activities to take place in our divisional hospitality suite. I hope that many of you will be able to be in Toronto to enjoy the program.

2015 marks the 70th anniversary of the founding of Division 1, and we will be celebrating 70 years of bringing psychology together. If you will be in Toronto, please plan to join us at the Division 1 Social Hour to eat anniversary cake and share your favorite memories of the division's activities and accomplishments at our open mic. We will offer a ticket for a free drink to the first 70 students and early career psychologists to arrive at the social hour. Information about the history of the division, including daily trivia sheets (Come every day to collect them all!), will be available in our hospitality suite. So, please, spread the word that Division 1's Social Hour and Hospitality Suite are the places to be in Toronto this August. *We're number one!*

On February 28th, at the APA building in Washington, Division 1 held an unusual midwinter meeting of the extended executive committee. Sixteen of us attended. It proved to be an excellent opportunity for us to develop our working relationships (the EC has many new members), to plan the anniversary celebrations, review what we are currently doing as a division, and to consider what we might like to do in the future. All of us agreed that the meeting was a success.

One of the things we did at the meeting was to revise our division's mission statement and develop a set of goals. (You will be able to read these documents elsewhere in this issue of the newsletter.) The goals we developed are intended to be both descriptive and aspirational. That is, they cover all of our current, traditional activities (i.e., our awards, the newsletter, the journal, the convention program, the Staats lecture), and they are broad enough to encompass new program initiatives we might take (some of which were discussed at the meeting, but others we have not yet imagined).

Our treasurer, Deborah Johnson, reported to us that we are in excellent financial shape, and she presented us with a 2015 budget, which we tweaked a bit and then voted to implement. We agreed that we would use our newly established goals to guide our budgeting so that we spend our funds primarily on projects and activities that contribute to the achievement of our goals. Our treasurer expressed concern that we have too much money in our checking account, and we agreed to seek information and advice about investing it more wisely. If any of you have experience with investment committees in other divisions, please write to Deb with your ideas for how we should proceed: djohnson@usm.maine.edu. We also discussed the possibility of setting up a fund with the American Psychological Foundation (APF). Our president-elect, Nancy Baker, is heading up an ad hoc committee to discuss the cost and feasibility of such a program. Several ideas were entertained about how we could allocate money from the fund once it is established. We will be sure to let you know the outcome of these discussions after the ad hoc committee reports back to us at our August meeting.

We heard interesting reports from our Membership Chair, Mark Sciutto, and our Student Representative, Emily Dow. Both told us that the most frequent reason why people join Division 1 is because someone asked them (or told them!) to do so. Like many (if not most) APA divisions, our division's membership is skewing older than the traditional retirement age of 65. If we are going to survive and thrive for the next 70 years, we need to recruit and retain new members, especially those at the beginning of their careers. If you want to celebrate Division 1's anniversary, whether you can attend the party or not, the best way to do so is to reach out to a colleague or student and invite her or him to join Division 1. Look for a membership form elsewhere in this newsletter. Feel free to copy the page and distribute it.

We discussed membership trends at length during our meeting, and we decided to do several things: 1) to survey members who have left the division to find out why they did not renew; 2) to do more membership outreach (such as communication via our divisional list serve) to engage members in divisional activities; 3) to launch a membership drive targeted at faculty who teach at small, primarily undergraduate, colleges and universities, as those faculty are often generalists of necessity, if not by choice. We will be reaching out to Psi Chi and to Division 2 (Teaching of Psychology) as we plan our membership drive. If you would like to join the Membership Committee to work on this initiative, or have ideas to advance the committee's work, or both, please contact Mark: mark.sciutto@gw.muhlenberg.edu.

President's Column - Joan C. Chrisler, Ph.D.

..... Continued from page 4

Student members of Division 1 would like more interaction through social media. Our tech-saavy newsletter editor, Alicia Trotman, volunteered to set up a Division 1 YouTube channel. Look for details about her plans and how you can contribute to them elsewhere in this issue of the newsletter. If you are willing to set up a Facebook or Research Gate page for the division, please contact me: jcchr@conncoll.edu. These activities also require a few creative thinkers who can develop and maintain the pages once they are set-up. These do not have to be time-consuming projects, but they do mean looking for ideas to post and thinking about how to make the pages interesting. If that sounds like something that you (or you and a team of your students could do – maybe as a class project?), we want to hear from you!

Increasing our Social Media Presence

If you are willing to set up a Facebook or Research Gate page for the division, please contact me: jcchr@conncoll.edu

The Division's Portraits of Pioneers in Psychology book series continues to sell well and provide us with annual royalties. The most recent volume, Portraits of Pioneers in Developmental Psychology, was published in 2011. Over the past few years, we have talked during our meetings about a desire to develop new volumes for this series, but we have not progressed beyond discussion. What we need is a series editor to take charge, give this some thought, propose topics, solicit people to edit books on those topics, and serve as liaison with our publisher. This is a great job for someone with an interest in the history of psychology, as the books contain biographies of major contributors to the field. If you are interested, please contact me: jcchr@conncoll.edu. If you know colleagues who might be interested, please ask them to contact me.

As I close, I would like to express my thanks to the extended executive committee of our division for their work, advice, and support during my presidential year. I am grateful to them all! In addition to those mentioned above, I thank Janet Sigal, Anita Wells, Jocelyn Turner-Musa, Richard Velayo, Mindy Erchull, Gerianne Alexander, John Hogan, Carrol Perrino, Sue Dutch & Sue Frantz, Terece Bell & Nicholas Noviello, and Wade Pickren.

Happy spring, everyone! See you in Toronto, eh?

American Psychology Association (APA)
Society for General Psychology

Why should I become a Member of Division 1

Because we are number 1!!!

Contact Emily Dow if you are a student! She is featured on page 9!

Otherwise if you have any questions, check out our membership brochure on page 10 designed by our Membership Chair: Mark Sciutto (mark.sciutto@gw.muhlenberg.edu)!

Division 1 Mission Statement and Goals

Mission

The Society for General Psychology (APA Division 1) is concerned with creating coherence among psychology's diverse specialties by encouraging members to incorporate multiple perspectives from psychology's sub-disciplines into their research, theory, and practice . Division 1 welcomes membership from academics, scientists, practitioners, psychologists whose main concern is the public interest, and students of psychology.

Goals

The goals of the Society for General Psychology (APA Division 1) are to:

1. Promote awareness of general psychology as an integrative approach to the field of psychology;
2. Advocate for connection and coherence among psychology's diverse specialties;
3. Provide opportunities for integration of multiple perspectives in education, research, practice, and psychology in the public interest;
4. Recognize excellence in general psychology and in the integration of multiple perspectives;
5. Provide networking opportunities to support integrative activity for psychological scientists, practitioners, educators, theorists, historians, public policy advocates, and students of psychology;
6. Support the development of the next generation of general psychologists;
7. Collaborate and cooperate with other APA divisions to develop programs and projects designed to integrate multiple concepts, perspectives, and theories.

Approved March 2015

2015-16 Election Statements

These are the two nominees for the president-elect position.

Irene Hanson Frieze, Ph.D.

Irene Hanson Frieze, Ph.D., is a Professor of Psychology at the University of Pittsburgh. Her current research areas include intimate partner violence, motivation and the migrant personality, and cross cultural work on changing gender-related beliefs. Her work is widely cited [h index=49, with over 10,000 citations]. Her most recent book is Hurting the One You Love: Violence in Relationships, published in 2005. She is working now on a revision and update. She was Editor of the Journal of Social Issues from 2001 to 2005, and is currently Editor of Sex Roles: A Journal of Research (beginning in 2007). Her Division 1 service includes membership on the William James Award Committee this year. She is a Fellow of Divisions 8, 9, 34, 35 and 52, and also is a member of 1 and 51. She has served in many roles for Division 9, including being President in 2006-7. She has also been active in Division 35, serving as President from 1983-84. Currently, she chairs the International Committee for Women for Division 52. She hopes to bring her experiences with other Divisions to help build additional networks for Division 1.

Josephine Tan, Ph.D.

Josephine Tan is an APA Fellow with Divisions 1, 12, 35, and 52, and a tenured clinical faculty at Lakehead University, Canada. She is active in research and has published in areas related to psychopathology, gender, and culture. She has received national research grant funding, presented at scientific meetings and other events including at the United Nations, and served as a journal and grant reviewer. Her service record includes President of the Canadian Council of Professional Psychology Programs (CCPPP, 2009-2010), Council Member of the College of Psychologists of Ontario (2004-2007), and more recently, as Member-at-Large and Awards Coordinator for Division 1 (2011-2014). As the Awards Coordinator, she regularly updated the Awards Manual, ran the Awards program, and liaised with APA, APF, APS, award committee chairs, and award winners. She received the Division 1 Presidential Award for her work. She continues to serve Division 1 in a joint task force with Division 2 on core curriculum in introductory psychology. She has received other Division 1 awards, the 2008 CCPPP Award of Excellence in Professional Training (Academic), and was recently selected as one of Lakehead University's 50+ research success stories in its 50-year history. She is also a Psi Chi faculty advisor and active mentor. Her vision for Division 1 includes the promotion of integrative work across subfields and encouraging participation from early career psychologists and students in divisional matters. She considers both to be important to the continued vitality and future of Division 1.

2015-16 Election Statements

These are two of the three nominees for the member-at-large position.

Mark Sciutto, Ph.D.

I am honored to be considered for a member at-large position in Division 1. I have been actively involved in Division 1 for the past few years. I served as the Division 1 program co-chair at the 2010 APA convention and I am currently serving as the Division's membership chair. The goals of Division 1 (elsewhere in this newsletter) speak to the importance of coherence and connection among the diverse areas of psychology. As a faculty member at a small liberal arts college, the Division's commitment to integration in education, research, and practice are particularly valuable for me; working with undergraduate students in my classes and in my research frequently demands that I be a "generalist". In a field that seemingly is becoming more specialized, I see great value in Division 1 and I hope to have the chance to support the Division's activities as a member at-large. As member at-large, I will be a strong advocate for improving Divisional resources that promote integration, collaborating with other APA Divisions, and reaching out to the next generations of psychologists.

Lisa M. Osbeck, Ph.D.

Lisa Osbeck is Professor of Psychology at the University of West Georgia, where she teaches courses historical and philosophical foundations and comparative theories of psychology. She holds a PhD in General Psychology from Georgetown University. She is the lead author of Science as Psychology: Sense-Making and Identity in Science Practice (Cambridge, 2011), which was co-winner of the William James Book Award from APA Division 1 for 2012 (General Psychology), and co-editor of Rational Intuition: Philosophical Roots, Scientific Investigations (Cambridge, 2014), with Barbara Held. Lisa is a Fellow of the American Psychological Association (APA Division 24) and the Center for Philosophy of Science, University of Pittsburgh. She received the Sigmund Koch award for Early Career Contributions to Psychology in 2005 and the Theodore Sarbin award from Division 24 in 2012. Her involvements with APA governance include several positions on the executive committee of Division 24, including program chair, secretary/treasurer, and Council representative. She was program chair for Division 1 in 2013.

2015-16 Election Statements

This is the third nominee for the member-at-large position.

Maria del Pilar Grazioso, Ph.D.

Maria del Pilar Grazioso is currently the director of a recently approved doctoral program in Applied Psychology at Universidad del Valle de Guatemala. She has continuously strived to foster and develop international collaborations to enhance the training and enhancement of General Psychologists at the research, teaching, and practitioner levels who can consequently further advance the integration and foundations of our discipline.

Her formal international education at the undergraduate, graduate, doctoral and post-doctoral level in Guatemala, United States and Argentina, was complemented by training opportunities in Canada and Europe provided her with an enormous array of perspectives that can enrich her possibility to serve as a Non US based, member-at-large in Division 1. She has been an active member in Division 52, 17 and continuously collaborated with other divisions and associations. She has served in academic, professional, administration, and leadership positions in Guatemala as well as internationally; her work in the Interamerican Society of Psychology attests for this as well as recognitions she has received for her continuous work in favor of the development of the Psychological science, discipline and profession.

She is active in conducting research in cultural, supervision, prevention, family, training, gender, ethics, and community research. She targets funding, publishing, and dissemination as top priorities of her endeavors not only for coordinating efforts but working collaboratively with teams, editorial boards, and task forces.

As a member at large for division 1 she will commit her efforts to enhance diversity in a culturally respectful manner serving to achieve the integrative, generic, and fundamental goals of our division.

APA Presidential Nomination Ballot

The following candidates (in order of number of nominations received) have been nominated to run for president of the American Psychological Association:

Antonio E. Puente, Ph.D.
Jessica Henderson Daniel, Ph.D.
Todd E. Finnerty, PsyD.
Jack Kitaeff, Ph.D. J.D.
Sharon L. Bowman, Ph.D.

Dr. Puente is a Fellow of Division 1.

Ballots will be sent to APA members on September 15th; voting closes on October 29th.

DIVISION ONE STUDENT CORNER

Dear student members of Division 1,

I hope this finds you well into your spring semester! I would like to thank everyone who responded to the brief survey I circulated in January. I presented the results to the Executive Committee Board at the mid-winter meeting, and we discussed the composition of the student membership and student needs in great detail.

Networking seemed to be a priority for many students. As a result, a **social hour just for students** in the Division 1 suite will be scheduled for the APA Convention in Toronto. More details about the social hour will be distributed via the listserv once the suite schedule has been finalized. Similarly, in order to develop networking opportunities outside of the APA Convention, I will be **spotlighting various members of the EC** via the student listserv over the next couple of months. Please keep an eye out for these virtual meet-and-greets! In the meantime, if you have not already done so, please be sure to join our Student Division 1 listserv through the APA listerserv portal (http://lists.apa.org/).

While I am excited to support and promote these initiatives for student members, my term as the Division 1 Student Representative will come to an end in August. I will be circulating a call towards the end of the semester for a new student representative. If you are interested, please email me directly. From personal experience, I can tell you it is a great opportunity to develop professionally and meet some amazing mentors in the field!

I will be at the Convention in Toronto this year, and hope to see you at the student social hour!

-Emily

Emily A. A. Dow, MA

Doctoral Candidate

Developmental Psychology

The Graduate Center, City University of New York

emilydow@gmail.com

Become a member of Division 1 today!

The Society of General Psychology, Division 1 of the APA, encourages students, academicians, and professionals in psychology to be educated and trained across the broad areas of the discipline and to promote unity and coherence in psychology.

To this end, we would like to offer you a **free 1-year membership to Division 1**.

By accepting this free offer you will:

⇒ Receive our biannual newsletter, The General Psychologist;

⇒ Be added to our email list to receive announcements about the society;

⇒ Be cordially invited to involve yourself in all of the activities of the division, such as serving on committees of the society, presenting your research and scholarship at the annual APA convention, and enjoying the congenial fellowship of like-minded colleagues.

Benefits of Ongoing Membership:

⇒ The General Psychologist, the Division 1 newsletter — the best newsletter in psychology

⇒ A subscription to the Review of General Psychology, Division 1's outstanding journal (this can be added to the free membership for an additional $22.00)

⇒ Discounts on Division 1 books, which includes six volumes of Pioneers in Psychology

⇒ Exciting programs at APA that present distinguished award winners

⇒ Great people who support coherence among psychology's many subfields

⇒ Low dues

Please visit www.apadivisions.org/division-1/membership for more information on this exciting offer.

Alicia Trotman, PhD - Newsletter Editor

This issue begins with Ed English's experience filming Milgram's experiment. Here we attain a 'behind the scenes' understanding of the pervasive influence of authority. Social interest under an Adlerian scope clearly was not a motivation for most participants, as we slowly comprehend via Eva Dreikurs Ferguson's article. However, thanks to our historian, John Hogan, we learn that academic freedom, as championed by one of our past Presidents of Division 1, Edward Tolman, was indeed crucial to Milgram's research.

Distinguishing the influence of authority from many different perspectives, including those that are international may be vital to the growth of psychology. Richard Velayo's research with his students on internationalizing the curriculum in psychology may be the first step in that direction. Secondly, reciting Shakespeare plays may help with discerning one's emotional status in charged roles as gleaned form Patrick O'Reilly's article. Thirdly and more importantly, Morton Ann Gernsbacher , our Ernest R. Hilgard winner in 2014, argues in her lecture that there is a need to move beyond dualistic thought to recognize cognitive obstacles that persons may face may actually *not* be obstacles but advantages. The brain automatically rewires itself to cope with loss and gain simultaneously; and dis/ability is redefined. Finally, an opportunity to learn about mindfulness-based practices may be instrumental to comprehending how existence without force is closely and uniquely tied to the present moment transforming thought and action.

Book Review

I had the sincere pleasure reading this book written by Susan M. Pollak, Thomas Pedulla and Ronald D. Sigel. New to this form of therapy, thebook informed me of practices that are proving effective in healing persons with psychological illness, destabilizing anxieties and chronic pain. The authors have utilized their years of experience treating patients and have conducted substantial historical research to compile a volume that details a gradual process of utilizing mindfulness base therapy. They provide a historical basis for every practice and instructional guidelines. In addition, they include a clinical illustration to address when the practice should be used, and with whom it may be most effective. As a result, I find this book to be accessible to anyone who has a keen interest incorporating a new form of therapy or wanting to elevate their current practices with a focus on the 'present'.

I was fortunate to have the opportunity to interview the first author, Susan M. Pollak, MTS, EdD.

1: *You stated in your preface that the book was intended to provide mindfulness skills to psychotherapists who may encounter different individuals that will require a practice suited to remediating their development. Since its publication, did you witness the book being helpful to other populations as well? If so, in what way?* While the Sitting Together was written for therapists, we are delighted that it is now being used as a textbook in undergraduate and graduate courses. Some professors are assigning a chapter each week to teach the fundamental skills of mindfulness, help students establish their own practice, and safely introduce mindfulness to their patients. Our hope is that Sitting Together will continue to be an accessible, hands-on guide for beginning as well as experienced therapists who want to bring the power of mindfulness into their clinical practice.

2: *There seems to be a mental trend that resisting discomforting memories and experiences spark their persistence. In resisting, we engage in bombastic and pleasurable behaviors to escape the pain that in reality never leaves. As a result, you mention that patients' minds 'create suffering'. Thus, how does mindfulness-based therapy help a patient recognize that the pain is still present? Furthermore, when the pain is recognized, what are some common behaviors patients have consequentially engaged in to manage the pain?* A useful maxim in mindfulness is, "What we resist persists." Or as many meditation teachers put it, "Pain is inevitable, but suffering is optional."

Continued on page 12

2: We are not going to be able to avoid pain, just as we won't be able to avoid sickness, old age, and death. However, we try not to add on to the pain. For example, I am working with someone who sustained an injury while training for a marathon. Before consulting a doctor, she spent hours on the internet diagnosing the problem, and was convinced that she had fractured her hip. She then began to worry that she would never run again, and was sure that if she couldn't run she would never be happy. Clearly, although she was only 23, her life was ruined. As we worked with this situation, she realized that not only was she anticipating the worst outcome but also was adding emotional upset to the physical pain. As we reflected on this, she realized this was a pattern that dated back to childhood. When she saw her doctor and had an MRI, it turned out that her fears were just fears and the injury was not debilitating.. One practice that is very effective for people in pain is the Body Scan, part of the MBSR (Mindfulness-Based Stress Reduction) course developed by Jon Kabat-Zinn. By staying with sensations in the body, bringing kind and gentle attention to them, not resisting or exaggerating them, but simply being with them, many people find that the perception of pain, along with the mental proliferation that often accompanies the pain, decreases and they subsequently have more resources to manage it.

3: *Mindfulness-based therapy involves many meditation practices. Is there yet any experimental data that show the effects these practices have on patients' ability to face painful memories?* This is an excellent question that brings us to the issue of traumatic memories and how to treat them. While MBI's (Mindfulness-Based Interventions) can help with symptom stabilization and reducing hyperarousal, current research suggests that the traumatic memories remain relatively intact. Researchers are now thinking of MBI's as useful adjunctive treatments, in addition to EMDR and exposure-based treatments, which can reduce re-experiencing symptoms. One excellent new book on this subject is Mindfulness-Oriented Interventions for Trauma: Integrating Contemplative Practices., edited by Follette, Briere, et al. (Guilford, 2014). David Kearney's chapter on working with Veterans speaks to this specific question.

4: *There appears to be a heightened bodily awareness that arises as persons engage in mindfulness-based therapy. They feel the sensations from painful emotions and are able to stay with those feelings as opposed to only thought or solely 'thinking about a narrative' that can be destructive to themselves and/or others without feeling. Through the therapy, have you seen patients' ability to stay with these emotions increase, and are they able to apply this skill in different situations? More importantly, when they do face a distressing situation, does 'feeling' come before 'thought' or do they work in conjunction?* Yes, through therapy and continued daily mindfulness practice there is often increased bodily awareness. Patients can learn to stay with painful emotions, learning to ride the waves of strong feelings. One phrase from a meditation teacher that we have found useful is, "You can't stop the waves but you can learn to surf." Mindfulness practice teaches us is that no thought, no feeling, lasts forever. Like a wave, or the breath, thoughts arise and then pass away. Rather than shut off painful emotions that emerge during challenging situations, patients can learn to work skillfully with the thoughts and feelings that they evoke. Rather than allowing our feelings to dominate our thoughts, or vice versa, we learn to be with both. One useful mindfulness exercise that we often teach is the practice of "labelling" thoughts, available on our website www.SittingTogether.com. When it comes to thoughts and feelings, psychiatrist Dan Siegel puts it succinctly: We name them to tame them.

5: *Now you stated that there is a balancing act between knowing when a patient needs to stay with the narrative or the experience. I can guess patients who decide to stay with the narrative that gives rise to painful or pleasant feelings benefit from labeling which is a meditation practice that labels the experience and has been amply researched. Do you find that there are a particular group of patients based on their backgrounds/identities that gravitate more towards the narrative than the experience? Or vice-versa? Or it does not matter – each patient takes a different pathway with narrative and/or experience?* There is a balancing act between the narrative and the experience, and every clinician needs to find a balance that works for both patient and therapist. I have learned to be with the patient where he or she is, rather than impose my agenda.

Continued on next page...

5: In one workshop we gave a few months ago, one participant commented, "My therapist keeps pushing mindfulness, but I just want to talk! I need someone to hear me." Since psychotherapy is the "talking cure," we don't want to neglect the importance of giving voice to experience so that it can be acknowledged and understood. It's always important, as in any therapy, to really listen to the patient, and not think that there's one "right" way to heal, or that mindfulness is a magic bullet that will cure all ills if only the patient will cooperate and meditate. It's always hard to generalize, but I find that patients who have experienced neglect or abuse in childhood often need to develop a narrative relationship with what happened to them, which in itself becomes an emotionally reparative experience. For most patients, it's important to start by building a strong, trusting alliance before introducing mindfulness. I think of the interpersonal relationship as the foundation of therapy, even mindfulness-based therapy.

6: *Meditation does not always work. As you stated, there are a number of reasons stated in the book where meditation practices are used as 'counterproductive defenses'. Also in many of the clinical illustrations mentioned in the book, a number of patients leave therapy and then return. Do you think these defenses emerge more with persons unfamiliar with meditation? And those who are experts in mediational practices, do these defenses arise as well but with less frequency?* As with any type of therapy, one size does not fit all. Mindfulness does not work for every patient. Defenses and transference do not magically disappear when you introduce mindfulness into the clinical hour. Often, patients turn to meditation as a defense against trauma or interpersonal distress, seeking some refuge from the misfortunes and hardship of life. I don't think we can accurately say that defenses are greater for those unfamiliar with meditation, or less frequent in those who meditate. We have all suffered, we have all been wounded, and we all construct defenses to help us navigate through the storms of life.

7: *In part of the book it is mentioned that therapy is more an art than a science because truths become more relative than absolute when working with patients. In addition, there is a quote from Freud stating that therapy, in particular 'psychotherapy' as an "impossible profession" (Freud, 1937). It appears that there are many uncertainties, so why continue if not only for the love of the profession? There appears to be 'compassion fatigue' or burnout that is experienced by some who do this work. As a result, what have been your rationales for continuing psychotherapy coupled with mindfulness practices?* And for those who do have burnout, do you find that many return to the profession? Therapy is often more art than science, and Freud, who advised us to turn to the works of the poets and novelists to understand the human heart, understood this well. He stated that therapy (along with raising children and governing of nations), is an impossible profession. Many therapists continue out of love of the work, and because they feel that they can make a difference in many, though not all, lives. When the work is going well, it can be enormously rewarding, and can at times feel sacred. As we discuss in Sitting Together, recent research suggests that what we call "compassion fatigue" may in fact be "empathy fatigue," if caring for others is not balanced by self-compassion and equanimity. Mindfulness and compassion can help clinicians mediate burnout in the workplace.

"It's always important, as in any therapy, to really listen to the patient, and not think that there's one "right" way to heal, or that mindfulness is a magic bullet that will cure all ills if only the patient will cooperate and meditate."

8: *In Chapter 2 of the book, you outline the benefits of practicing mindfulness-based therapies for the therapist. It appears that the effectiveness of these therapies increase once the therapist makes mindfulness practice part of their daily lifestyle. In making mindfulness a habit, what exercises or recommendations does the clinician find most difficult?* Mindfulness is most effective when it becomes a daily practice. In talking to clinicians, one theme that often arises is the difficulty of practicing alone. Mindfulness doesn't have to be a solitary pursuit, and traditionally it was done with the support of a community. So I encourage folks to find a community of mindfulness practitioners, even if it's a virtual one, if they possibly can. And when people worry that they aren't doing it "right," I like to remind them of something one of my meditation teachers often says, which is that you can't fail at mindfulness. Unlike academia and clinical work, where we often don't feel that we are good enough, effective enough, or powerful enough, mindfulness allows us to let go of the "comparing mind" and relax in the present moment without grasping and without needing things to be different from the way they are.

9: *Besides reading this comprehensive book, what advice would you have for therapists now seeking to learn and engage with mindfulness practices?* I would also suggest to therapists that they listen to talks (so many are available for free, online) from meditation masters who are also psychologists such as Tara Brach and Jack Kornfield.

Book Review - Sitting Together: Essential Skills for Mindfulness Based Psychotherapy

.....Continued from page 13

10:*Besides reading this comprehensive book, what advice would you have for students who may be seeking to incorporate these practices into their educational trajectory? What resources (e.g. internships, scholarships, etc.) are available to them?* At this point, there are only a few programs that offer internships, scholarships, or rigorous training in integrating mindfulness with psychotherapy. However, hopefully this will be changing soon. We have started a new Center for Mindfulness and Compassion at Cambridge Health Alliance, http://www.challiance.org/ForProviders/CMC.aspx., which we hope will become a model for ways to bring mindfulness into a clinical setting.

11:*Any closing thoughts?* People may also be interested in following my blog on Psychology Today, which has many new practices and applications that are not in Sitting Together, https://www.psychologytoday.com/blog/the-art-now.

New Book Releases from our Members

Rational Intuition: ***Philosophical Roots, Scientific Investigations***

Edited by *Lisa M. Osbeck*, University of West Georgia & *Barbara S. Held*, Bowdoin College, Maine

What is intuition? What constitutes an intuitive process? Why are intuition concepts important? After many years of scholarly neglect, interest in intuition is now exploding in psychology and cognitive science. Moreover, intuition is also enjoying a renaissance in philosophy. Yet no single definition of intuition appears in contemporary scholarship; there is no consensus on the meaning of this concept in any discipline. Rational Intuition focuses on conceptions of intuition in relation to rational processes. Covering a broad range of historical and contemporary contexts, prominent philosophers, psychologists, and cognitive scientists explore how intuition is implicated in rational activity in its diverse forms. In bringing the philosophical history of intuition into novel dialogue with contemporary philosophical and empirical research, Lisa M. Osbeck and Barbara S. Held invite a comparison of the conceptions and functions of intuition, thereby clarifying and advancing conceptual analysis across disciplines.

Train Your Mind for Peak Performance: A Science-Based Approach for Achieving Your Goals

Authors: *Lyle E. Bourne, Jr. & Alice F. Healy*

Whether you're training to play the piano, speak a foreign language, shoot a target with a bow and arrow, or master the techniques of fine carpentry, the conditions of your training will affect how successfully you learn and perform.

- How can you process new information in order to remember it better and use it in the future?
- How long should you work, study, or practice before taking a break?
- Is it desirable or even possible to "overlearn"?
- How can you counteract fatigue and boredom to improve performance if the task is tedious?

Cognitive psychologists Lyle Bourne and Alice Healy have studied these and other questions for decades to determine the best training conditions for learning and job performance. Readers will learn how best to acquire, retain, and transfer knowledge and skills to new situations.

..... Continued from page 2

The door between them was closed and the "teacher" was seated at a table in front of a very large, imposing, highly scientific looking electric-shock machine. Watching unnoticed behind the two-way mirror, I thought, how could anyone who had just received a mild electric shock not question or at least express some doubt about administering shocks from a machine labeled "Shock Generator" with switches running incrementally from 15 to 450 volts and with corresponding descriptors starting with "Slight Shock" and progressing to "Intense Shock", "Extreme Intensity Shock", "Danger Severe Shock", and the "XXX" at the highest range? Nonetheless, everyone during the filming proceeded as they were instructed.

Even though I had been told that no one was actually going to be progressively shocked and that this was essential for the bona fide scientific experiment, I felt queasy about filming. A few years earlier in a college course, I had studied the role of the cameraman in intense situations like riots and war, and I had made a documentary inside the violent prison at Riker's Island, NY, so I continued filming the subjects in the experiment.

I also remembered, as a very young student in parochial school, how ineffective it was being struck by a teacher with a ruler across my hand, and how it made me suspicious of teachers who did it. So, in a strange way I was curious about how these "teachers" would administer punishment during Milgram's experiment.

The implication of war with Milgram's experiment

I told Ms. Perry who was a journalist, psychology researcher, and Australian citizen and was most likely young at the time of the Milgram experiment, how American college students felt in the 1960's. What was uppermost on every young man's mind was his draft status with the Selective Service System. (Milgram had joined the Air Force ROTC in 1951 at Queens College and served his time (Blass, 2004).)

We all knew that if Elvis Presley – the King - could be drafted away a few years earlier from millions of his adoring fans to serve in the military, what chance did anyone of us have as the path to war in Vietnam seemed to be inexorably heating up? I told her that, like other recent college graduates, I had a deferment from the military to work on a government contract, and so I was at Yale

Edward English

available to work on Milgram's experiment as well.

Ms. Perry told me about one of the subjects in her book, who participated in the early experiments. Herb Weiner, who quit before finishing because of the intense pressure he felt upon being prompted to administer the shocks even after the "learner" expressed pain. After the experiment, Weiner bitterly complained to Milgram about his own reaction and voiced his ethical concerns. He was proud of that, and rightly so, but being a member of the Yale faculty, Weiner could easily disobey because he had the higher authority of the institution on his side. He was an assistant professor at Yale when he entered the experiment. Ms. Perry said she wasn't sure if Weiner mentioned this when he signed up. Most subjects chosen for the experiment were just ordinary Americans from diverse backgrounds unaffiliated with the University. It proved to be far more difficult for these individuals to disobey authority on their own, which was exactly the purpose of the experiment, (Milgram, 1973a).

More pointedly, could the short prompts that were unemotionally spoken to Weiner prod him to continue the experiment by the "leader/actor" in a lab coat with a clipboard sitting behind him, be as threatening as a uniformed SS officer barking orders backed by the Third Reich? Yet this comparison between the pre-Vietnam War Americans and the World War II Germans was very commonly drawn with the Milgram experiment. Obviously, this comparison was, I believe, to be highly offensive to Americans.

Clearly, with Stanley Milgram's background, this was implausible. His parents were Jews who left Eastern Europe before the Holocaust. His father still had relatives there during the war, so they were acutely aware of the evils of the Nazis. (Blass, 2004). He was not trying to make the case to restore the reputation of the "good" Germans.

Neither was Milgram directly implicating Vietnam War era Americans. Yet the results of the experiment were overshadowed by the comparison to the Holocaust almost from the beginning. Some of this may be due to the notoriety of the trial of Adolphe Eichmann, which had begun with much publicity shortly before the Milgram experiment. On the one hand, Milgram's studies were influenced by the bedrock of irrefutable evidence on the Holocaust in European culture. On the other hand, should Americans have introspectively linked themselves to these horrendous events? Hadn't many of the 'greatest generations' fought and died to defeat Hitler and win the Second World War? Milgram's studies might have been received better if he had deemed them applicable to the authority of the military-industrial complex that President Eisenhower warned about in his farewell address in 1961. However, that connection was overlooked in his book Obedience to Authority published in 1974, where Eichmann is referred to at least seven times.

Continued on next page...

.....Continued from previous page

In the early 1960's, some of us naively thought the Milgram experiment might be used as a rationale to stay out of the draft. I thought of being a conscientious objector, but realized that such a sudden shift would not be consistent with my history. I joined the Universal Life Church and paid for a card and certificate that said I was a religious minister, but that attempt to avoid the draft would have certainly been obvious to my draft board. I asked to join the Peace Corps, but was told I might be drafted afterwards anyway. I would not lie to dodge the draft, and even though I felt we were making a terrible mistake in Vietnam, I wanted to serve my country in some way, so I enlisted in the US Army Reserves. There was a real sense of desperation everywhere among young people and even some parents. The whole country seemed to be falling apart, and "revolution" was shouted out as if it were a real possibility. The draft had burrowed into our collective gut; the Eichmann trial was only, rarely, a very, small part of a specific conversation.

Conclusion

Milgram's experiment could have been used to help power the anti-Vietnam War movement. Had he directly confronted the war establishment, and received support outside the psychology profession, his work might not have been subjected to the endless rounds of discussions by the profession over ethical and methodological concerns, (Elms, 2009).

Thinking back over all the enormous amount of criticism Milgram got for his experiment, he might have spared himself a lot of grief if he had just stopped the experiment as soon as the door closed on the "learner" and the "teacher/subjects" agreed to the casual prompt by the "leader" to administer the first shock. At that instant, it was obvious to me behind the two-way mirror that when the "teachers" took their seat right in front of the imposing shock machine, that they were willing to ignore any cautions of good conscience they might have had to obey the flimsiest of authority under a barely credible scientific rationale.

With the tumult of the civil rights and early, anti-war protests still rumbling in my mind, when the door shut and the first switch was about to be activated, I can distressingly remember squelching my own inner commands to run into the room and shout, "Stop, don't flip that electric switch!" Had I done this, however, and the experiment was halted just before the first switch, most of the same professionals clamoring that he went too far, would probably have scoffed at those results and Milgram's experiment would not have been so significant.

> If Stanley Milgram could respect these people who had spontaneously revealed, on film, after varying protestations, such an unambiguous obedience to, at best, a perfunctory and questionable, minor authority, surely, he was committed to probing the darker side of our nature for the benefit of all of us.

But what has made the most sense for me over all the years is remembering, from the time of the filming, how compassionately Stanley Milgram would debrief the subjects after the experiment. If he could respect these people who had spontaneously revealed, on film, after varying protestations, such an unambiguous obedience to, at best, a perfunctory and questionable, minor authority, surely, Stanley Milgram was committed to probing the darker side of our nature for the benefit of all of us.

We do not want to believe that our authorities are out to control us and Milgram doesn't blame our authorities either. His experiment delineates in numerous variations, that it is our complicity with authority that is the crux of the problem. People are relieved, in trying situations, when someone in authority takes responsibility for their actions. (Milgram, 1973b).

Many of the subjects in the Milgram experiment, Ms. Perry told me, have had a difficult time trying to understand what they went through and what it meant. Personally, I have lasting memories, but always with the understanding that the experiment I was participating in was of valid scientific concern. This has only deepened over the years, even as the psychology profession has continued to flounder with how to further build on his results. Ms. Perry said her opinion of Milgram deteriorated after she spoke with many of the participants in the experiments as they recounted the emotional stress they had endured. It would be a very sad irony if her book "Behind the Shock Machine" confirmed their worries and they believed that their participation was for naught.

In 1984, at Stanley Milgram's funeral, his colleague, Irwin Katz, reflected on the obedience experiment, "After two decades of critical scrutiny and discussion, there remains one of the most singular, most penetrating, and most disturbing inquiries into human conduct that modern psychology has produced in this century. Those of us who presume to have knowledge of man are still perplexed by his findings, with their frightful implications for society," (Blass, 2000, p. 136).

CALL FOR BOOK SERIES EDITOR

PORTRAITS OF PIONEERS IN PSYCHOLOGY

Are you a generalist with an interest in the history of psychology? Do you have editorial skills and experience? If so, we have a job for you! The Society for General Psychology (APA Division 1) is calling for a volunteer to serve as Editor of our book series, known as *Portraits of Pioneers in Psychology*. The most recent volume, *Portraits of Pioneers in Developmental Psychology*, was published in 2011. Duties of the series editor are to: serve as liaison with our publisher; prepare a list of topics for potential volumes; recruit experts to serve as volume editors; and coach less experienced potential volume editors through the prospectus writing and editing phases. Interested parties should send a cover letter and c.v. to Joan C. Chrisler, Ph.D. at jcchr@conncoll.edu. Review of candidates will begin in May and continue until the position is filled.

Historical note

Making 16 mm documentaries in the 1960's, meant that directors and producers often were their own cameramen and editors because of the physical, hands-on technology. (Purists like Frederic Wiseman have only recently switched to digital.) Stanley didn't really shoot or edit himself; consequently 'Obedience' is a classic well-constructed, powerful documentary without any special effects. This editing style reflected the scientific rigor Stanley strove for at Yale. At the very end of the later version re-edited, narrated, and distributed by Pennsylvania State University, there is an artistic visual and narration sequence that steps outside the strict documentary form and points the finger at "governments." Milgram did not receive adequate additional funding for future obedience experiments and ever the brilliant scientist, he moved on. (Blass, 2011.)

———————————————————-

'Milgram lite' is a term coined by Alan C. Elm to describe the tasks executed by participants in replicated studies of Milgram's experiment to be less nocuous. Compared to the higher degree of shock levels administered in Milgram's experiment, the tasks in these subsequent studies had to comply with institutional review boards ensuring participants were not subjected to possible stress or trauma.

Alfred Adler's profound understanding of social motivation

By *Eva Dreikurs Ferguson, Ph.D.*

Abstract

Alfred Adler (1870 -1937) developed a holistic and dynamic theory that emphasized social motivation and goals as the basis of thought, emotion, and actions. For Adlerans, Gemeinschaftsgefühl (Social Interest) is the key to mental health and is inextricably interwoven with the need to belong, and democratic relationships with equality of value of each individual help enhance well being.

Alfred Adler's profound understanding of social motivation

Early in the 20th century, Alfred Adler, a Viennese psychiatrist, postulated that humans, and social animals generally, have a basic need to belong that has evolutionary and survival value (Ferguson, 1989). Adler's theory is built on the concept that humans, as part of their evolutionary heritage, have a need to feel belonging (Ferguson, 2010). When they feel belonging they thrive, and they feel inadequate when they do not feel belonging. Well-being occurs when one feels belonging, of having value as an equal among equals. Malaise occurs when one feels one does not belong. Although it is called a 'feeling' it contains cognitions ("I am convinced I do not belong") and emotions ("I feel hurt"). Feeling one does not belong can lead to various emotional and behavioral disorders. Long before Baumeister and Leary (1995) wrote their seminal paper on the need to belong, Adlerian counselors, educators, and psychotherapists identified the symptoms of discouragement and disorder in children and adults as a result of the feeling that one does not belong.

Equality and need to belong

According to Adlerian psychology, the feeling of belonging involves a conviction that the person has value as an equal among equals (Dreikurs, 1999). The feeling that one has value is amplified when one's contributions to the 'greater good' of the community in which one lives is valued.

Whereas much of psychology in the past century has focused on negative emotions, in part stemming from the influence of Freud (1900, 1936a, 1936b), Adlerians can be said to be the first 'positive psychologists' (Ferguson, 2009). Aggression as behavior and anxiety, fear, and alienation as emotions were viewed by Adlerian psychologists as outward symptoms of a more fundamental process of discouragement with respect to being valued and feeling belonging. Adler (1929, 1931, 1933) viewed humans as fundamentally social beings, and their motivation, thought, emotion, and action can be understood only in social terms. Because humans live in groups, they share characteristics with other social animals, as Seyfarth and Cheney (2012, 2014) and de Waal (2013), among others, have notably indicated.

Adler (1933) postulated that Gemeinschaftsgefühl (loosely translated as Social Interest) was the crucial motivation that assures well being. When humans have high social interest, of caring for and being committed to the welfare of all members of the community, physical and mental health are increased.

Early social psychologists, like Kurt Lewin (1948), understood the link between personality, social identity, and various psychological processes. Years before Lewin, but congruent with him, Adlerians emphasized the importance of 'equality' as essential for well being. One cannot feel 'belonging' if one does not feel 'equal.' The work of Kenneth Clark (1967), in providing research evidence that led to the end of segregation in public schools in the USA, was based on Adler's concept of the need to belong and the importance of feeling equal with others.

Adler and his younger colleague Rudolf Dreikurs (1999) recognized that 'well being' and 'belonging as an equal' were irrevocably linked. Adler (1933) postulated that Gemeinschaftsgefühl (loosely translated as Social Interest) was the crucial motivation that assures well being. When humans have high social interest, of caring for and being committed to the welfare of all members of the community, physical and mental health are increased. Social interest is a potential in all humans, but like language, it needs to be taught. Without social interest, humans become self-oriented. This in the long run leads not only to poor social relationships but to diminished health. Social interest is reciprocally related to the human need to belong as an equal. The process involves a positive spiral: when humans feel belonging and equal they are more likely to have high social interest and seek to contribute to the larger community, and when they have strong social interest this is likely to lead them to increase their feeling of belonging as equals.

For Adlerians, social relationships that involve reciprocity, collaboration, and mutual support are more likely to occur when humans in their beliefs and actions relate to each other as equals. This is also found in non-human social animals (de Waal, 2013). Autocratic relations among human beings, based on an 'obedience' model (Milgram, 1974), do not involve equality nor mutual support, and thus, in terms of Adlerian psychology, the autocratic process leads not only to social and societal difficulties but also to various kinds of psychological disturbances.

Continued on next page...

.....Continued from previous page

The importance of goals

Adler's theory is teleological in the sense that human motivation, emotions, and actions are goal-directed (Ferguson, 2014). Whereas other theories emphasize a variety of sources for motivation and emotion, Adlerians postulate that human motivation and emotion is a function of goals the individual is seeking. If one wishes to change the motivation or the emotion it is necessary to change the goal. Goals within Adlerian psychology are primarily based on 'private logic,' which is the private reasoning each person gives to the immediate situation. Adler showed that one is not necessarily aware of one's goals and private logic nor, ordinarily, need one have such awareness. However, when one faces life problems that one tends not to be able to solve readily, understanding one's private logic and unaware goals helps one find solutions.

Educators and parents, especially, have gained increased benefit by learning about the mistaken goals of children (Dreikurs, 1947, 1958). Children's disturbing behavior can be readily altered if the adults understand the mistaken goals of the child and if the adults have learned effective ways of dealing with these goals. The effective solutions have the aim of increasing the child's social interest and increasing the child's feeling of belonging. Specific Adlerian methods have been developed that help children meet the challenges they encounter (Dreikurs, Cassel, & Ferguson, 2004; Dreikurs & Soltz, 2014; Gfroerer, Nelsen, & Kern, 2013; Nelsen 2011).

Democratic processes increase mental health

According to Adlerian psychology, just as autocratic processes diminish the sense of being an equal among equals, democratic process more likely increase the feeling of belonging. According to Dreikurs (1958; Dreikurs, Grunwald, & Pepper, 1999), democratic processes involve freedom with order. This contrasts to the obedience-based autocratic processes, in which there is order without freedom. In the third kind of process, called 'laissez faire,' people do as they like without regard to others and there is freedom without order. The parenting and education methods developed by Adlerians separate these three styles of leadership. The Adlerian model, which emphasizes the democratic style of leadership, shows the kinds of problems that occur with autocratic and laissez faire styles of parenting and education.

In his writings and teachings, Dreikurs showed that problems in homes and schools would occur when parents and teachers used autocratic and laissez faire methods that minimized the feeling of belonging and equality. When children are trained to be responsible and caring with high social interest, and when they understand the consequences of their behavior, they feel encouraged and function in prosocial ways. This requires democratic procedures, in which the children are partners in the rules and decision making. In autocratic homes and schools, the children follow rules set by the authorities. They are not contributing as equals to the life of the community.

In an obedience-oriented home or school the child tends to have two possible behavior routes: to obey or to rebel. Dreikurs warned in his writings and speeches that until homes and schools learn democratic leadership and the methods developed by Adlerians, children are increasingly likely to rebel. Whereas in centuries of punitive control the authorities could beat the children into submission and obedience, in the democratization of modern society, when such punitive methods were removed, new methods of democratic parenting and leadership were required. Countless books and articles were written by Adlerians (e.g., Dreikurs, 1958; Dreikurs & Soltz, 2014; Nelsen, 2011) that described Adlerian methods for parenting and educating children and youths. These methods were based on the democratic model of 'freedom with order.' In his description of methods, Dreikurs (Dreikurs, Grunwald, & Pepper, 1999) credits the work of Lewin, Lippit, and White (1939) for demonstrating the crucial elements of autocratic, democratic, and laissez faire styles of leadership.

Research by Ferguson, Hagaman, Grice, and Peng (2006) has found that modern parenting styles are likely to be a mixture of democratic and laissez faire styles. Follow up studies verified that not only do young adults, when reporting how their parents raised them, show confusion between the democratic and laissez faire styles but that parents themselves have this confusion. Parents who themselves were raised by autocratic methods know they do not wish to adopt these methods in raising their own children, and so they follow what they consider to be the opposite styles of parenting. In the process, although they often call their parenting style 'democratic,' they in fact follow many laissez faire procedures. The data obtained by Ferguson, Hagaman, Maurer, Mathews, and Peng (2013) and in many related studies showed that parents and their young tend to have a 'binary' set of concepts, that parenting is either autocratic and based on obedience or it is what they call 'democratic' and based on unlimited freedom given to children.

Continued on next page...

..... Continued from previous page

This binary belief system leads to many homes having a laissez faire and not a democratic style of parenting, as defined by Lewin (1948) and Dreikurs (1958). In the Adlerian approach, a clear distinction is made between democratic methods, that involve freedom with order, and laissez faire methods that involve freedom without order.

From the point of view of Adlerian psychology, just as social interest can be learned, democratic methods of human relationships also can be learned (Ferguson, 2007). Thousands of parents and teachers in the United States and abroad have followed the methods offered by Adlerians and have found that unruly and disgruntled children become cooperative and appreciative members of the family or school community. They grow up to be responsible and caring members of the larger society, in work and in their many personal relationships. The Adlerian methods apply equally to the workplace and to international relations (Ferguson, 2012), and they are used effectively in many treatment programs in counseling and psychotherapy (e.g., Shulman & Mosak, 1988; Sperry, 2009, Walton, 2012).

General Psychology Trivia Quiz **Part 2**
By John D. Hogan, PhD *

The brief descriptions below all refer to past-presidents of the APA. How many can you identify? (Correct answers can be found on p. xx. Don't peek! :)

1. His first name was Burrhus but he preferred to be called Fred.
2. She was the first woman to receive a PhD degree in psychology.
3. More APA presidents received their doctoral degrees from this university than any other.
4. William James referred to this as a "bloated tumefied mass." What was he referring to?
5. One past-APA president wrote this to another past-APA president about the book of a third past-APA president: "It is chock full of errors, masturbation, and Jesus. The man is a mad man." The people involved? The book?
6. She was likely the oldest member of APA ever.
7. This highly regarded U.S. Western university, home to several APA presidents, is so large, it resides in two different zip codes.
8. She was the only woman to receive a PhD degree under the mentorship of Wilhelm Wundt.
9. The brain of this pioneer psychologist is on display in a case outside the psychology department of his home university.
10. The birth name of this future psychologist was Harold Israel, but he was known professionally by a different name.

Bonus Question: Josiah Royce was a Harvard faculty member and a president of the APA. His home in Cambridge, MA was later bought and lived in by a very prominent television personality. Which TV personality lived in Josiah Royce's house?

*John D. Hogan is the historian for APA Division One.

Edward C. Tolman

Eminent Learning Theorist and Outspoken Supporter of Academic Freedom

by John D. Hogan and Nate Frishberg - *St. John's University*

Edward C. Tolman was one of the most prominent learning theorists of the 1930s and beyond. Although he was a behaviorist, his theory incorporated some strikingly non-behavioral elements. One of his most important creations was the notion of "intervening variables," a concept that was immediately taken up by other learning researchers. As an educator, Tolman also became embroiled in a political brouhaha regarding academic freedom. His stand on the issue eventually earned him high marks and the praise of many of his contemporaries. Tolman was president of APA Division 1 from 1947-48, and again from 1952-53, one of only two presidents in the Division's 70 year history to serve two terms.

Early life and education.

Tolman was born on April 14, 1886, in Newton, Massachusetts, the son of a well-to-do rope manufacturer and a Quaker mother. Although his father encouraged him to enter the family business, Tolman chose instead to become an academic. At first he studied engineering at the Massachusetts Institute of Technology (MIT) but, after reading works by William James, he found himself drawn to philosophy and psychology. Immediately following graduation from MIT in 1911 with a BS degree in electrochemistry, he entered the psychology doctoral program at Harvard University, where he was exposed to the work of many prominent psychologists of his day, including Robert Yerkes, Hugo Münsterberg, and Herbert Langfeld.

In the summer following his first year at Harvard, Tolman went to Germany to prepare for the language requirement of the doctoral degree. (For many years, one of the requirements for a U. S. doctoral degree was familiarity with French and/or German.) In Germany, he had his first encounter with Kurt Koffka, the Gestalt psychologist, who would later have such an influence on his learning theory. Indeed, in 1923, he would return to Germany for further study of Gestalt theory. Upon graduating from Harvard in 1915, he was hired as an instructor at Northwestern University where he taught for three years until he was dismissed—in part, he thought, due to his pacifist beliefs. Following that, he became a faculty member of the University of California, Berkeley, where he remained for the rest of his professional life.

Theory and professional accomplishments.

Although Tolman was educated in the behaviorist tradition, he nonetheless remained interested in the concept of introspection. It was during his early years at Berkeley that he began to develop the learning theory for which he would become famous. He established an animal laboratory in which he and his students studied the ability of rats to learn mazes. Unlike prominent theorists of his era, most notably E. L. Thorndike and John B. Watson, Tolman extended learning beyond simple stimulus-response connections. He emphasized that stimuli and responses exist in a given context, that is, they relate to other stimuli and responses as opposed to being isolated phenomena. He also argued that learning is purposeful rather than consisting of simple repetition of stimulus-response pairings -- that it can be conceived of as consisting of a series of "sign-gestalt-expectations." (This term is exemplary of Tolman's fondness for constructing hyphenated neologisms.) In 1932, he published his theory in a book titled, Purposive Behavior in Animals and Men.

Expanding on these ideas, Tolman introduced a concept he called "intervening variables." Intervening variables are hypothesized internal states of a human or animal that are proposed to link stimuli (or independent variables) with responses (or observable, behavioral outcomes). Although Tolman remained a behaviorist who believed that all of learning could be understood by studying a rat in a maze, his formulations were a departure from the strict behaviorist position so common then. Instead, his theory is seen as a precursor to the cognitive movement that would later come to dominate the field. Some commentators have characterized his theory as the best theory of learning to emerge in the 1930s. In 1936, at age 51, he was honored by his fellow psychologists by being elected the 46th president of the American Psychological Association.

Continued on next page...

EDWARD C. TOLMAN

Eminent Learning Theorist and Outspoken Supporter of Academic Freedom

by John D. Hogan and Nate Frishberg - *St. John's University*

.....Continued from previous page

For all his important contributions, Tolman's legacy is not solely the result of his achievements in psychology. In the late 1940s, U.S. Senator Joseph McCarthy drew great public attention when he charged that government institutions and academia were filled with Communists and other individuals disloyal to the country. As a result of his accusations, some state legislatures required loyalty oaths from their employees. In 1949, consistent with state law, Berkeley required its faculty members to sign such an oath.

Tolman's loyalty to the United States had never been in question and he had never given evidence of political beliefs that were considered "radical." Nonetheless, he objected to the oath and refused to sign it. His resistance was based on both personal liberty and the idea of academic freedom—that external pressure on educators decreases their ability to learn and teach accurate, objective truth. Indeed, academic freedom carried particular significance for Tolman as well; throughout his life as an academic, he had felt a sense of personal release in being able to conduct research and publish his ideas freely and openly. In his defiance, he became a leader of those opposing the oath.

University officials threatened Tolman with dismissal. In response to this threat, he sued the university, taking the case to the Supreme Court of California. In the 1952 decision, Tolman vs. Underhill, the requirement of the loyalty oath was removed. Tolman's courage in standing up against this rule cannot be understated. Indeed, the climate of McCarthyism made it very dangerous for anyone to take such a stance—even in the absence of Communist beliefs. In 1959, ten years after his refusal to sign the oath, Tolman was awarded an honorary LLD degree from Berkeley. A few years later, a new Psychology and Education building at Berkeley was named Tolman Hall in his honor.

In summary.

Not all of Tolman's ideas have stood the test of time. In particular, his belief that laws of learning applied equally to all living creatures, is dated. Still, his legacy is strong -- found not only in his theory and its anticipation of cognitive psychology, but in his students, many of them distinguished, who benefitted from his kindness and from the intellectual stimulation he provided. Unlike other learning theorists, he did not demand loyalty to his system. He has been remembered as a gifted and passionate teacher who placed great value on his students. Moreover, as one of his students has pointed out (Gleitman, 1991), he was always open to new ideas and willing to draw from all parts of psychology as well as other disciplines – the least dogmatic of theorists. Perhaps this openness and commitment to the exchange of ideas is what gave him the courage to stand up against the impact of McCarthyism in academia. Edward Chace Tolman died in Berkeley, California, on November 19, 1959, at the age of 73.

Internationalizing the Psychology Curriculum through Mentored Student Research

(From left to right): Sarika Persaud, Richard Velayo, Ph.D., Wallis Back, Ranya Marjieh, and Lucio Forti.

(Not in photo: Suchun Dong and Michael Trush)

At Pace University's Psychology Department (New York City Campus), one of the recently developed course offerings for its psychology undergraduate and graduate students is a "mentored lab" course. This course, which may be taken for a maximum of two semesters, allows students to be involved in faculty research as research assistants but with the benefit of obtaining credit towards their degree. Such hands-on and active learning experience has become highly sought after by students who wish to continue in their psychology education at the masters or doctoral level.

Dr. Richard Velayo, Professor of Psychology at Pace University, is one of the instructors involved in this mentored lab initiative. His research group called "Internationalizing the Teaching of Psychology (IToP) Team (http://rvelayo.jimdo.com/itop-team/) focuses on exploring and assessing strategies that help infuse international content and promote a global perspective within the discipline of psychology at the higher education level. The essential requirements for this mentored lab involve a weekly meeting with the principal researcher/faculty and other research assistants/students involved in the research, and a 10-page experiential final paper. In addition, each student member develops a proposal or research project related to one of the following subtopics: (1) identifying effective pedagogical strategies to internationalize psychology courses, (2) developing of an assessment tool for an internationalized psychology course, and (3) applying Internet-based technologies (IBTs) as teaching and research tools to help infuse international content.

Their projects are presented at an u coming research psychology conference. Some of the psychology conferences in which the IToP team has presented include the annual meetings of the American Psychology Psychological Association, Eastern Psychological Association, Greater New York Conference on Behavioral Research, Hunter College Psychology Conference, and Pace University Psychology Conference.

There are currently 5 students actively involved in Dr. Velayo's mentored lab class. Each student is actively undertaking research projects of interest to them, which ties in one of the topics related to the IToP team research subtopics (as mentioned above). At each weekly meeting, students provide the entire team with updates about their individual work and discuss preparations for presentations (e.g., poster, paper, symposium) at an upcoming conference.

Internationalizing the Psychology Curriculum through Mentored Student Research

Richard Velayo, Ph.D., Sarika Persaud, Lucio Forti, Wallis Back, Ranya Marjieh, Michael Trush, and Suchun Dong ~ *Pace University, New York*

.....Continued from previous page

Below are brief descriptions of each of the student-initiated research projects:

Lucio Forti (lf72881n@pace.edu) - "*Incorporating an International Perspective in the Classroom Through Web-based Technology: Best Practices and Demo*"
Recent advances in technology have contributed toward an increase in the availability and usage of web-based collaborative tools in higher education. Previous research has examined how internet based strategies can be used to cultivate critical thinking, engagement, discussion, and improve learning outcomes in the classroom. This presentation will focus on a summary of best practices gathered from the current literature for instructors seeking to leverage technologies in order to incorporate an international perspective in psychology courses. Challenges and potential barriers to success will also be explored as well as how to navigate the plethora of choices in collaborative tools available online. A brief live demonstration will highlight how strategies can be applied as well as how to find additional resources for those interested in exploring how an internet based strategy can be integrated into a course. Directions for future research aimed at examining tools and pedagogy will be discussed.

Wallis Back (wb94354n@pace.edu) – "*Shamanic Healing Techniques: An Exploratory Case Study on Its Implications To Western Approaches to Therapy*"
There is a growing interest within modern Western society to explore implications of ancient Eastern practices and traditional Shamanic healing techniques. Preliminary research has emerged on the benefits of mindfulness practices such as mediation and herbal alternatives to pharmaceutical medication. However, there lacks psychological research, on the how spirituality and the significance of incorporating non-Western therapeutic approach into the psychological healing process. A review of the current academic literature on the post-psychological effects of a traditional Shamanic "ayahuasca" ceremony and the perceived importance of a deeper sense of spiritual connection, suggest a viable means of integration into Western therapy. In addition, a personal explorative case study will be conducted in order to assess pre and post quantitative measures of neurotransmitter levels, quantitative measures of anxiety, depression, spiritual connection and overall subjective well-being after participating in a traditional Shamanic ayahuasca ceremony in Peru.

Ranya Marjieh (rm52659p@pace.edu) - "*How are Graduate Psychology Programs Becoming Internationalized? A Side-by-side Comparison of Programs in Transpersonal Psychology and Cross-Cultural Psychology*."
This literature review and critique provides a comparison of curricula between transpersonal psychology and cross-cultural psychology graduate programs - two programs deemed to inherently infuse an international psychology perspective in the education and training of the graduate students in each of these programs. In addition, a listing of graduate programs that offer these two graduate degrees, with relevant background information, history, similarities and differences in curricula will be presented. Moreover, descriptions of how these two programs differ in the way they integrate an internationalized perspective will be provided. Suggestions and implications for further for curricular reform will be incorporated in the report.

Suchun Dong (sd76217n@pace.edu) - "*An Investigation Into The Use of Active Learning Approach To Teaching Graduate Psychology Courses in China*"
Psychology in China has received unprecedented attention in recent years. At the same time, there is an increasing number of psychology programs are provided in graduate schools to train students to be psychologists. However, the approach to teaching that professors tend to utilize in these programs to encourage students' active learning in China remains unclear. The current study will collect and analyze graduate program training information from selective ten official graduate school websites in China, interview twenty Chinese psychology professors via email about their training plans and teaching methods, and will also conduct an online survey regarding program evaluation to fifty psychology graduate students in China.

Internationalizing the Psychology Curriculum through Mentored Student Research

Richard Velayo, Ph.D., Sarika Persaud, Lucio Forti, Wallis Back, Ranya Marjieh, Michael Trush, and Suchun Dong ~ *Pace University, New York*

.....Continued from previous page

Michael Trush (mt09725n@pace.edu) - *"Memory for Concept Pairs as a Function of Participant Culture and Bimodality Type"*

This internet-based study will commence with the participant providing consent, and completing demographic information, including the culture(s) that they most closely identify with. Participants will then be encouraged to select a recall strategy they deem will be most effective in remembering visual concept pairs. Participants will randomly be assigned the presentation in a visual-textual format, or the visual -textual presentation with an auditory component, in which the name prescribed to each picture will be presented auditorily. Following the concept pair presentation, subjects will be presented with one of the two associated concepts, and tested as to which image appeared alongside the testing item. The participant will be asked to select the associated pair from five multiple-choice options. Lastly, the subject will complete The Cultural Orientation Scale, to determine their orientation towards either a collectivistic or individualistic culture, and if they tend towards a horizontal (egalitarian) or vertical (hierarchical) nature. Descriptive statistics and correlations will be run in order to determine the relationships between, memory strategy, culture, and bimodality type.

These student-initiated research projects exemplifies what could be an effective strategy to get students to develop a more international perspective about psychology and a greater appreciation of how the psychological constructs we learn need to take into consideration the cross-cultural and cross-national contexts in which it applies. There is tremendous value in involving students in the process of internationalizing the teaching of psychology. More importantly, it is essential to prepare them for a society that is increasingly becoming global.

For more information about this presentation and of the IToP team, please contact Dr. Richard Velayo at rvelayo@pace.edu or Sarika Persaud (Dr. Velayo's graduate research assistant) at ap75294n@pace.edu.

Division 1
70th
Anniversary

Mark your calendars!

2015 marks the 70th anniversary of the founding of Division 1.

We will be celebrating 70 years of *bringing psychology together*.

If you will be in Toronto, please plan to join us at the Division 1 Social Hour!

Shakespeare Plays

By Patrick O'Reilly, Ph.D.

I am a clinical psychologist at Napa State Hospital in Napa, California. The hospital is a locked facility housing over a thousand adults who have been diagnosed with serious and long-lasting biological mental disorders. Patients receive psychiatric services and individual and group psychotherapy. Group therapy at Napa is intensive and includes groups modeled on Dialectical Behavioral Therapy (DBT) and Cognitive-Behavioral Therapy (CBT), substance abuse relapse prevention skills training, identifying and correcting criminal thinking, and psycho-educational classes. In addition to these groups, normally facilitated by psychologists, psychiatrists and social workers, Napa State Hospital also has a vibrant recreational therapy program.

"To thine own self be true" (Hamlet)

In a departure from my scheduled psycho-education, identifying criminal thinking and substance abuse relapse prevention groups, I applied to facilitate a group I had long wanted to do. I had been an undergraduate English major and had often thought that Shakespeare could be both psychotherapeutically helpful and entertaining to the patients if presented in the right way, and so, with the permission of my supervisor, I started a Shakespeare group. To my delight, several patients quickly enrolled in this time-limited group. It is also worth noting that because the great majority of our patients experienced their first psychotic break while in their late teens and early twenties, most had not been exposed to Shakespeare's plays. I thought that providing genuine intellectual stimulation in conjunction with psychotherapy could be a valuable learning experience for them.

My justification in facilitating this group, which was done in collaboration with Napa State Hospital psychologists Doctors Ian Chapman and Thomas Knoblauch, was that Shakespeare's characters represent the gamut of moral strength, moral weakness and human emotion. Maybe, I thought, the patients could find a way to relate personally to the situational challenges faced by the characters in the plays and in the process, acquire insight into their own behavior and the way they face adversity and temptation. We chose five plays for the group (Macbeth, Hamlet, A Midsummer's Night Dream, Romeo and Juliet and Much Ado About Nothing) that we thought were easily accessible to people unfamiliar with Shakespeare's work and had plot lines that were fairly straight forward.

Thought this be madness, there is method in it" (Hamlet)

The majority of the group members were diagnosed with schizophrenia and many were dually diagnosed, and, even though medication compliant, they continued to experience intense internal stimuli. For that reason, the format of the group was purposely uncomplicated. I typed a brief (less than one page) synopsis of the play that included a description of the play's characters, which I passed out to the patients at the start of each group. Dr. Chapman, Dr. Knoblauch, or I would then ask for a volunteer from the group to read the synopsis aloud. A separate volunteer would read the descriptions of the characters. The group met weekly and each group meeting consisted of reading and listening to one act of the play. The group members were each provided with a print out of the act we were covering that week and after reading the synopsis, the group listened to an audio CD of the play while reading along with their printed copies. The CD was paused frequently so that the patients could discuss what they were reading and hearing, ask questions of each other as to the play's meaning up to that point and speculate about possible plot twists or motivations of the characters. Most of the patients were quite engaged in this process and at the conclusion of the weekly group would often express disappointment that they would need to wait a week before continuing. When the entire play had been read and listened to, the group watched a DVD of the play, also pausing the DVD frequently to encourage discussion.

.....Continued from previous page

"For man is a giddy thing, and this is my conclusion." (Much Ado About Nothing)

What was gratifying to Doctor s Chapman, Knoblauch and myself was the depth of connection the patients felt towards the characters in the plays and the surprising interpretations they gave to plot development, all of which they related to their own experiences in the mental health system and their often chaotic and trauma filled lives in the community prior to their current hospitalization. The group discussions were lively and often quite detailed and it is worth noting just a few of the reactions the patients expressed as the group progressed.

By far, the patients' favorite play was *Macbeth*. One patient, who spent years as a homeless drug addict, said early on in the play that Macbeth was "on a slippery slope." He explained to us that Macbeth "had it all – riches, a castle, a beautiful wife" and then threw it all away because, the patient explained, once somebody started sliding down the slippery slope, there was no going back. The patient equated Macbeth's downfall to the patient's own years of addiction, saying that before the patient began using drugs, he had subsidized housing, a monthly disability check and friends. He told us that the drug use was a slippery slope for him because he lost everything to his addiction just as Macbeth had once he killed King Duncan. A female patient commented that she could relate to Lady Macbeth's obsessive hand washing and ultimate suicide because before being hospitalized at Napa she had been "a cutter" and had attempted suicide multiple times. Her final comment was "maybe Lady Macbeth should have tried DBT."

Hamlet, which we felt surely would be a success with the patients, was more problematic. We had purposely left the concluding act of the play off the synopsis given to the patients each week and the comments during discussion were relevant and occasionally surprising. One patient pointed out that Hamlet's faked madness would not have fooled any of the group members and nodding to the facilitators added "but you guys would probably have bought it." Since many of the patients in the group, the female patients especially, had experienced serious trauma in their lives, they were able to express empathic compassion for Ophelia and found Hamlet's treatment of her reminiscent of abusive relationships they'd experienced. The most surprising comments made during the discussion of the play's conclusion were by two male patients who'd said very little in the group up to that point. One statement, made with considerable indignation, was "I didn't know Hamlet was going to die! Hamlet wasn't supposed to die!" The other patient, when asked if he wanted to add to the group conversation said "I didn't really understand the play but I liked the sound of the words."

Oh, I am fortune's fool!" (Romeo and Juliet)

Romeo and Juliet was especially easy for the patients to understand and they related to the play in interesting and insightful ways. One male patient thought that the dilemma faced by Romeo and Juliet would be the equivalent of a patient and a nurse at the hospital falling in love. He explained that their love could be real but no one would understand it, and both would be punished by the hospital administration. When we explained to him that such a relationship would be an abuse of authority on the part of the nurse and would be viewed as he or she taking advantage of the patient, he said simply "if it's real love, it's real love, just like Romeo and Juliet."

The patients' observations about *A Midsummer Night's Dream* were also interesting, particularly because they felt a connection to the magical elements of the play. One patient explained that had he been a character in the play, he would not have been one of the "rich" characters or one of the lovers, nor would he have been a member of the fairy world. He thought that being in the mental health system brings with it its own degradations (although he did not use that word) and it would be foolhardy to imagine that he could be someone of importance. He added that if he was in the play he would certainly be one of the tradesmen who were laughed at and mocked during their serious attempt to stage Pyramus and Thisbe. Another patient said that there is a fine line between the magic world (in her case the auditory hallucinations she experiences daily) and the real world and that the line was easy to cross. She finished up by adding that her observation was the only thing she felt like saying about A Midsummer Night's Dream.

Shakespeare Plays

By Patrick O'Reilly, Ph.D.

..... Continued from previous page

While it appeared that the patients enjoyed Much *Ado About Nothing*, mostly they said that there was nothing particularly complicated about the story and they didn't relate to the characters in a personal way. One patient commented that it was immediately apparent that Benedick and Beatrice loved each other and the patient found their bickering pointless, adding "why waste all that time if you love somebody." Another patient said that he's known "lots of people just like" Don John, the villain of the play and was at a loss to understand why people are mean to each other. The group members all enjoyed the character Dogberry the policeman and pointed out that because he was not a rich man and because he was different and clumsy he had been underestimated by the wealthy and better educated characters in the play. I believe they were making a pointed reference to themselves in relation to hospital staff.

The patient observations that I noted in this paper are a miniscule sampling from often remarkably detailed and animated group discussions. The patients' ability to analyze the plays from their own life experiences – and do this in ways that were immediately relevant to their own lives, was both gratifying and humbling to the group facilitators, and for those reasons we considered the group successful and have discussed repeating the group with five different Shakespeare plays.

Patrick O'Reilly, Ph.D. is a clinical psychologist at Napa State Hospital in Napa, California and is an Assistant Clinical Professor of Psychiatry at the University of California, San Francisco School of Medicine.

2014 Ernest R. Hilgard's Award Lecture

Diverse Brains

By *Morton Ann Gernsbacher, PhD*

Please address correspondence to:

Morton Ann Gernsbacher, PhD

Vilas Professor & Sir Frederic Bartlett Professor

University of Wisconsin-Madison

MAGernsb@wisc.edu

What a great era it is to be involved in brain research, because the public loves brains. From just the books that are sold on Amazon.com, you can learn how to Use Your Brain (Amen, 2013), Use Both Sides Of Your Brain (Buzan, 1991), and Challenge Your Brain (Tuller & Rios, 2005). You can also find out how to Boost Your Brain's Power (Pasinski, & Neporent, 2012), Feed Your Brain (McCleary, 2011), Power Up Your Brain (Perimutter, 2012), even Beef Up Your Brain (Noir, 2009). But just remember: You Are Not Your Brain (Schwartz, & Gladding, 2012).

However, if you want to, you can Change Your Brain, indeed, Change Your Brain To Change Your Body (Amen, 2010). You can Save Your Brain (Nussbaum, 2010), Rewire Your Brain (Arden, 2010), and more specifically, Rewire Your Brain For Love (Lucas, 2013). You can Educate Your Brain (Brown, 2012), Entertain Your Brain (Stickels, Harris, & Christin, 2007), Stress Proof Your Brain (Hanson, 2010), Evolve Your Brain (Dispenza, 2008), Unchain Your Brain (Amen & Smith, 2010), even Outsmart Your Brain (Reynolds, 2004).

But Don't Check Your Brains At The Door! (McDowell & Hostetler, 2011), because you need to Train Your Brain about food (Hughes, 2012), Train Your Brain For Success (Seip, 2012), Train Your Brain For Wealth, Prosperity, and Financial Security (Aubele, 2011), Train Your Brain the Green Beret Way (Martel, 2012), and Train Your Brain More (Kawashima, 2008). If all of this is confusing, you are in luck because Amazon also sells a Training Your Brain for Dummies manual (Alloway, 2011).

These book titles illustrate just how much the public wants to read about anything to do with the brain. Journalists are also aware of our passion for reading about the brain. Riffing off the 1980s Public Service Announcement, "This is your brain. This is your brain on drugs" (Suddath, 2009), we now have a whole slew of articles, proclaiming "This is your brain. This is your brain on love" (Popular Science, n.d.).

A few years ago, the New York Times offered us "Your Brain on Computers" (2010) and followed that offering with "Your Brain on E-Books and Smartphone Apps" (Bilton, 2012). TIME Magazine offered us "Your Brain on Laughter" (Szalavitz, 2013); NPR offered us "Your Brain on God" (2009) and Psychology Today, "Your Brain on Food" (Wenk, 2010). Even TED conferences got into the act, with "Your Brain on Improv" (Limb, 2010).

2014 Ernest R. Hilgard's Award Lecture

Diverse Brains

By *Morton Ann Gernsbacher, PhD*

.....Continued from previous page

Websites are also honed into our love of the brain, and they seem to be mining the 'your-brain-on' meme for click bait. For example, Mashable.com, which covers social media, lured readers with the headline, "My Brain on YouTube" (Erickson, 2012). For the Scholastic Corporation, it was "Your Brain on Reading" (Cunningham & Rose, n.d.). For a website called The Credits, "Your Brain on the Movies" (Nuwer, 2013), and from Coupons.com, "Your Brains on Coupons" (Pavini, 2012).

During the 2012 election cycle, there was great interest in your brain on politics. A Science Daily press release claimed that, "Neuroscience reveals brain differences between Democrats and Republicans" (University of South Carolina, 2012). A research study described in USA Today claimed that brain differences can be found based on faith (Shimron, 2011). A study reported in PositScience claimed brain differences between morning people and night owls (Fitzgerald, 2012).

In my presentation, I outlined when, we as scientists, should accentuate brain differences, and when we probably should resist doing so; why we, as individuals, should accept the brain differences that truly exist; and, how, we as a society, can accommodate those brain differences.

Scientists Should Resist Over-Hyping Brain Differences

I began my presentation by focusing on an area of putative diversity that has held popular mystique for centuries: the potential differences between male versus female brains. A 2007 issue of Scientific American (Halpern et al., 2007b), to which I contributed, was based on a juried review of scientific evidence that we had previously published in the APS journal, Psychological Science in the Public Interest (Halpern et al., 2007a). The starting point for our scholarly review was the stereotypic assumption that men's brains are best suited for analytical careers, such as being math and science professors at Harvard (Summers, 2005).

In another APS journal, Current Directions, author Cordelia Fine (2010), had reminded the public that centuries before our current stable of high-tech brain imaging tools, such as MRI scanners, other tools were used to identify brain differences, such as scales. In the Victorian era, the 'missing five ounces,' the difference in weight between the average male and female brain, was considered the source of women's intellectual inferiority.

On average, female brains still weigh less (Ruigrok et al., 2014), and, on average, a female brain has a thicker cortex, which is the outermost sheet of neural tissue (Im et al., 2008; Luders et al., 2006; Preul et al., 2006; Sowell et al., 2007). But, these days, most neuroscientists no longer interpret the fact that women have thicker cortices than men – or conversely, that men have thinner cortices than women – as a deficit. It is simply a difference. However, such a progressive interpretation of difference as diversity rather than different as always deficient does not extend to all other groups.

As I reviewed in one of my APS Presidential columns (Gernsbacher, 2007b), when one research study reported that autistic persons have thicker cortices than non-autistic persons, the finding was interpreted as an autistic deficit (Hardan et al., 2006). When other research studies reported the opposite finding, autistic persons have thinner cortices, that finding was also interpreted as an autistic deficit (Chung et al., 2005; Hadjikhani et al., 2006). In neither case, was the effect size larger than what is observed between average males and females, but such heads you lose, and tails you also lose interpretations that pervade the neuroimaging-of-autism literature (Gernsbacher, 2006; 2007a; 2010).

Indeed, a few years ago, one of my PhD students, Jennifer Stevenson examined all of the autism-related neuroimaging studies in the literature at that time. The list included 36 studies with data on the cerebellum; 32 studies with data on the Superior Temporal Gyrus and Sulcus; 30 studies with data on the inferior frontal gyrus; 29 studies with data on the amygdala; 27 studies with data on the fusiform gyrus; 24 on the striatum; another 24 on the cingulate gyrus; and another 24 on the hippocampus.

To make a long story of meta-analyses short, for none of these brain regions was there a consistent pattern of results across studies. There were inconsistent findings among the functional imaging studies; there were inconsistent findings among the structural, volumetric, imaging studies. Not one brain region showed a consistent pattern across studies. But, whenever a difference between autistic and non-autistic participants was reported, even if the direction of the difference conflicted with the finding of another study, the difference was always interpreted as an autistic deficit.

For example, among studies examining the volume of the hippocampus, six studies reported that autistic participants had larger hippocampi than non-autistic participants. In each of those six studies, the autistic participants' larger hippocampi were interpreted as an autistic deficit. Another three studies reported just the opposite: that autistic participants had smaller hippocampi than non-autistic participants. In each of these studies, the autistic participants' smaller hippocampi were also interpreted as a deficit. Another study reported no difference between autistic and non-autistic participants' hippocampi. This study suggested that it must be other brain regions that are to blame for autistic participants' deficits.

As another example, among studies examining task-related functional activation in the superior temporal sulcus or gyrus, nine studies reported that autistic participants produced greater task-related activation, and that greater activation was interpreted as an autistic deficit. Another seven studies reported just the opposite – that autistic participants produced less task-related activation, and that was considered a deficit. And two other studies split the difference.

As a third example, among studies examining task-related functional activation in the amygdala. Five studies reported that autistic participants produced greater task-related activation, and that was a deficit. Three studies reported less activation, and that was a deficit. And seven studies found no difference between autistic and non-autistic participants, with some of these studies suggesting that the autistic participants must have been 'compensating for there to be no differences.

Continued on next page...

..... Continued from previous page

Inconsistency characterized all the brain regions that Jennifer Stevenson reviewed. Such inconsistencies might be due to methodological pitfalls that can befall cognitive and affective neuroscience, for example, small sample sizes and what's known as p-hacking. Indeed, in research made possible by the Simons Foundation, Haar et al. (2014) drew similar conclusions.

Examining a collection of neuroimaging data from nearly a thousand autistic and non-autistic participants, made possible by Autism Brain Imaging Data Exchange, and motivated by the fact that previous findings "have not been replicated consistently in the literature" most likely due to "small samples of participants," Haar et al. (2014, p. 1, 9) found "no evidence for between-group differences in any measures of gross anatomy or in specific brain regions including the amygdala, hippocampus, most segments of the cerebral cortex, and the cerebellum".

However, in all the previous, less-powered studies, whenever a difference was observed, regardless of whether it was consistent with the previous literature or not, the difference was always attributed to an autistic deficit. Similarly, a few years ago in the APS journal Perspectives on Psychological Science, I reviewed the evidence for whether mirror neuron dysfunction underlies autism (Gallese, Gernsbacher, Heyes, Hickok, & Iacoboni, 2011). This body of data was also riddled with inconsistencies.

For example, one study measured autistic and non-autistic participants' brain activity during imitation and reported that autistic participants demonstrated greater task-related activity in the inferior parietal region. That greater task-related activity was interpreted as evidence that autistic persons have broken mirror neurons (Williams et al., 2006). But another study, also using an imitation task, reported that autistic participants demonstrated less task-related activity in the inferior parietal region, and that finding was also interpreted as evidence that autistic persons have broken mirror neurons (Dapretto et al., 2006).

I think we as neuroscientists can do better; I think we can be more sophisticated when we conceptualize diverse brains. Attributing every difference, regardless of the direction of the effect, to a minority group's deficit is cheap – and boring. A considerably more fruitful, approach has been demonstrated by an exciting series of neuroimaging studies of blind individuals (Bedny, Pascual-Leone, Dravida, & Saxe, 2012; Bedny, Pascual-Leone, Dodell-Feder, Fedorenko, & Saxe, 2011; Burton, Snyder, Diamond, & Raichle, 2002; Ofan & Zohary, 2007; Röeder, Stock, Bien, Neville, & Rösler, 2002; Watkins et al., 2012).

Although the brain is not nearly as regionally functional as our color-coded schematics lead us to believe, some of the most explicit functional specificity is found in the lobe farthest to the back, the occipital lobe. In sighted people, the occipital lobe shows strong specificity for processing visual information. But what about blind people, particularly people like Stevie Wonder, who have been blind since birth? If the occipital lobe's usual job is to handle visual processing, what do the occipital lobes of blind people do?

In the Victorian era, the 'missing five ounces,' the difference in weight between the average male and female brain, was considered the source of women's intellectual inferiority.

It would be boring and rather foolish to give blind people a bunch of visual stimuli, and when the blind participants' occipital lobes showed less task-related activity than that of sighted participants, pop the champagne, write up the study, and conclude that one has found a blind deficit. A more interesting approach is to investigate what type stimuli the occipital lobes of congenitally blind persons do respond to, and several recent neuroimaging studies have done just that.

These studies show that the brains of blind people are amazingly flexible organs. They take that prime brain real estate known as the occipital lobe, and they use it for other functions, like higher-order reasoning, judgment and decision-making, and spoken language comprehension. From my vantage point, that discovery provides a stellar model for how we as neuroscientists can more fruitfully go about studying brain differences. Similarly fruitful models have also been demonstrated recently by developmental psychologists who study children with disabilities other than autism.

For example, Susan Goldin-Meadow has demonstrated a masterful approach to studying deaf children (2003). Most compelling to Susan Goldin-Meadow are deaf children who neither are exposed to a spoken language, because they are deaf and cannot hear a spoken language, nor are these children exposed to a signed language, because their hearing parents resist using it. These deaf children develop what is known as home sign, a unique gesture system, which does not resemble their hearing parents' gestures. Rather, deaf children's home signs resemble other deaf children's home signs – even deaf children halfway around the world.

Thus, instead of describing deaf children as having a deficit in learning their parents' spoken language, and instead of describing deaf children as having a deficit in learning their speaking parents' gestures, Susan Goldin-Meadow describes deaf children's home signing as a masterful demonstration of their cleverness. Susan Goldin-Meadow appreciates that deaf children's home signing can provide an informative window into the resilience of human communication.

Another example of a more fruitful model for how to study differences without calling everything a deficit is represented by Miguel Perez-Perera and Gina Conti-Ramsden's book analyzing Language Development and Social Interaction in Blind Children (1999). As one of this book's reviewers notes: "This book summarizes and discusses the existing and very often conflicting literature and concludes that blind children's language development is not just a slower version of 'normal' development. Rather, blind children's language acquisition follows a different route" (Schleef, 2002, p. 589). A different route, not a deficit route.

Members of another minority have also witnessed a progression from their neuroanatomy and behavior being defined as a deficit to simply a difference. I am referring to left-handers. In the 19th-century, left-handedness was considered extremely pathologic (Kushner, 2011; 2013); it was assumed to be an indicator of primitivism, savagery, possession by the devil, and criminality, hence the term, sinister (Goodman, 2014).

By the middle of the 20th century, some of the cruelest of those assumptions had attenuated, at least in Western societies. As developmental psychologist Gertrude Hildreth reported in 1949, parents had become a bit more willing to accept that their left-handed children must have been, presaging the words of Lady Gaga, "born that way" (Hildreth, 1949, p. 213).

Diverse Brains

By *Morton Ann Gernsbacher, PhD*

.....Continued from previous page

Nonetheless, when over 100 upper-middle class parents were asked whether they would prefer that their child be right-handed, all but 2% of the parents indicated a preference for right-handed children. Similarly, when parents were asked if their child showed a left-handed tendency would they make the child shift to the right hand, nearly three fourths of parents said yes. And when parents were asked if their child showed a left-handed tendency would they help him become a better left-hander, only a minority of parents said that they would (Hildreth, 1949).

Times have changed, and in Western societies, attitudes toward left-handedness now epitomize the United Nations Convention on the Rights of Persons with Disabilities, which prescribes "respect for difference and acceptance of persons with disabilities as part of human diversity and humanity," which led me to the second part of my presentation.

Individuals Should Accept Their Brain Differences

I described a bountiful literature of behavioral studies, because these studies empirically document the robust, positive effects of accepting disability as diversity. The statement "It is important for me to accept myself as I am" is one of the key items on the Acceptance of Disability Scale, which was constructed over 40 years ago, and has been used in numerous research studies around the world (Linkowski, 1971). The Acceptance of Disability scale also includes other items, such as "I feel ok talking about my disability with others," "There are more important things in life than those my disability prevents me from doing," and "Because of my disability, I have a lot to offer other people."

As with most psychological scales, the Acceptance of Disability Scale comprises both positively scored items, like these items, for which acceptance of disability is indicated by a person's agreement with the item, and negatively scored items, such as "My disability affects aspects of my life that I care the most about," "My disability prevents me from doing the things I want to do," and "My disability has disrupted my life greatly." For these items, agreeing with the statement indicates a lack of acceptance of disability.

Using the Acceptance of Disability Scale, and other measures like it, a wealth of scientific data has been collected from persons of all ages, with various disabilities, in numerous countries. Unlike the morass of inconsistent brain imaging data, the body of data on acceptance of disability is remarkably consistent. Each study demonstrates a positive association between acceptance of disability and positive psychological states.

For example, one large-scale study of nearly 1300 individuals in the U.S, with a wide range of various disabilities, demonstrates that disabled persons' acceptance of their disability is highly and positively correlated with their self-esteem (Li & Moore, 1998). The more the individuals accept their disability, the more positive their self-esteem. This strong positive relation between acceptance of disability and self-esteem, for persons with disabilities, is independent of the person's gender, race, level of education, or marital status, and it is only weakly a function of whether the person has multiple disabilities or just one (see also Belgrave, 1991; Heinemann & Shontz, 1982; Linkowski & Dunn, 1974; Starr & Heiserman, 1977).

Other studies measuring acceptance of disability demonstrate a related, positive effect. Persons who accept their disabilities have better psychological well-being, as demonstrated in a U.S. study of nearly 120 Polio Survivors (Tate et al., 1994) and a Belgian study of nearly 100 individuals with Chronic Fatigue Syndrome (Van Damme, Crombez, Van Houdenhove, Mariman, & Michielsen, 2006). A Dutch study of nearly 600 persons with Spinal Cord Injury also demonstrates a strong, positive correlation between acceptance of disability and psychological well-being (Wollaars, Post, van Asbeck, & Brand, 2007).

This Dutch study, as well as a Thai study (Attawong & Kovindha, 2005), and an Australian study (Snead & Davis, 2002) with persons with Acquired Brain Injury, also illustrate another important principle: Acceptance of disability is frequently independent of severity of disability. There are individuals with severe spinal cord or brain injury who fully accept their disability and reap those positive benefits of acceptance. And there are individuals with much milder injury who resist accepting their disability and therefore, they miss out on the benefits of acceptance.

Independence between acceptance of disability and severity of disability has also been shown in a Polish study of 115 persons with chronic lower back pain (Janowski, Steuden, & Kurylowicz, 2010) and a U.S. study of 50 persons with pain from a spinal cord injury (Summers, Rapoff, Varghese, Porter, & Palmer, 1991).

Multiple studies also demonstrate that quality of life for persons with disabilities is also independent of the severity of the person's disability. For example, a British study of nearly 50 adults who were disabled by prenatal exposure to thalidomide demonstrates that their quality of life is independent of the severity of their disability (Bent, Tennant, Neumann, & Chamberlain, 2007).

In this British study, severity of disability was precisely determined because of the long-term financial compensation provided by the UK Thalidomide Trust. There were individuals with severe levels of impairment due to their exposure to thalidomide as well as individuals with only minor levels of impairment. A U.S. study of nearly 100 adults with Parkinson's also demonstrates that quality of life is independent of degree of or severity of disability (Gruber-Baldini, Ye, Anderson, & Shulman, 2009). Rather, the primary predictor of quality of life was the person's optimism.

All the studies that I reviewed pertain to individuals themselves accepting their own disability and reaping positive effects on their own self-esteem and their own quality of life. But frequently I am asked to speak to parents of children with disabilities, perhaps because in addition to being a researcher in this field, I too am a parent of an offspring with a disability.

An area in which parents are deeply interested, particularly parents of children with disabilities, is stress. And the data could not be clearer that for parents of children with a wide range of disabilities and medical conditions, parents' stress is not related to objective measures of their children's impairments. That is, parents' stress is not a function of, it is independent of, the severity of their children's disabilities.

Continued on next page...

..... Continued from previous page

For example, in a US study of nearly 100 parents of children with congenital heart disease, parents' subjectively reported stress was unrelated to objective measures of their child's illness, including the number of hospitalizations, operations, catheterizations, outpatient visits, or a cardiologist's independent rating of the severity of the child's illness (DeMaso et al., 1991). In a Canadian study of 53 mothers of children with intractable epilepsy, parents' subjectively reported stress was unrelated to seizure type, seizure frequency, number of failed treatments and surgeries (Wirrell, Wood, Hamiwka, & Sherman, 2008).

In a US study of 63 parents of children with intellectual disability, parents' subjectively reported stress was unrelated to objective measures of their children's functioning levels, for instance, whether their children were so-called high functioning or low functioning (Guralnick, Hammond, Neville, & Connor, 2008). For 70 Taiwanese parents of children with Duchenne muscular dystrophy (Chen & Clark, 2007), and for 270 US parents of children with cerebral palsy (Manuel, Naughton, Balkrishnan, Smith, & Koman, 2003), parents' subjectively reported stress was unrelated to objective measures of their children's disability.

The same, highly consistent pattern has been shown for the disability of autism. Although parents of autistic children sometimes report experiencing even more stress than parents of children with other disabilities, parents' stress is unrelated to every objective measure of autism. Parents' stress is unrelated to their autistic children's level of social interaction (Davis & Carter, 2008), receptive and expressive language (Davis & Carter, 2008; Kasari & Sigman, 1997), IQ and cognitive abilities (Baker-Ericzen et al., 2005; Bishop, Richler, Cain, & Lord, 2007; Kasari & Sigman, 1997), and even the degree of or severity of their children's objectively measured autistic traits (Baker-Ericzen et al., 2005; Davis & Carter, 2008; Epstein et al., 2008).

In contrast to objective measures of impairment, for children with autism, and for children with other disabilities, their parents' stress is related to parents' subjective judgments of their children's impairments. The more stress the parents feel, the more impaired they judge their children to be (Arnaud et al., 2008; Beck et al., 2004; Benson et al., 2006; Benson & Karlof, 2009; Ekas & Whitman, 2011; Georgiades et al., 2011; Kasari & Sigman, 1997).

Given the powerful role of affect on perception, the strong relation between parents' subjectively reported stress and their subjective evaluations of their children's abilities and disabilities is not surprising. But the strong relation between parents' subjectively reported stress and their subjective evaluations of their children's abilities should throw caution to any researcher who relies on parent report for any aspect of assessment in their studies.

The United Nations prescribes "respect for difference and acceptance of persons with disabilities as part of human diversity and humanity."

If parents' stress is not a function of how disabled their children are, at least not as objectively measured, then what can attenuate parents' stress? In collaboration with fellow University of Wisconsin Psychology professor, Hill Goldsmith, and former graduate student Emily Schweigert, we investigated whether parents' acceptance of their children's disabilities attenuated those parents' subjective levels of stress. The disability we worked with was autism, and we modified items from the Acceptance of Disability Scale (Linkowski, 1971).

For example, rather than parents responding to the item, "It is important for me to accept myself as I am," we asked them to respond to the item, "It is important for me to accept my child with autism as they are." Rather than "My disability prevents me from doing the things I want to do," the item was stated as, "My child's autism prevents me from doing the things I want to do." Rather than "My disability affects aspects of my life that I care the most about," the item was "My child's autism affects aspects of my life that I care the most about." And rather than "Because of my disability, I have a lot to offer other people," "Because my child has autism, they have a lot to offer other people."

Our participants were parents of twins, one or both of whom were objectively diagnosed as autistic. In this way, we could investigate whether parents' stress was compounded by having two children with autism. It was not. In fact, as countless other studies have shown, parents' subjectively reported stress was not related to any objective measure of their children's disabilities – even, as our study demonstrated, when those disabilities were doubled. Rather, parents' subjectively reported stress was solely a function of their acceptance of their children's disabilities.

By acceptance, I surely do not mean doing nothing. Indeed, the parents, in our study, who scored high on acceptance of their children's disability reported enrolling their children in just as many conventional therapies as the parents who scored low on acceptance.

But the parents in our study who scored high on acceptance of disability, as well as persons with disabilities who score high on acceptance of disability, are adept at reframing their situation (Gerber, Reiff, & Ginsberg, 1996; Hastings, Allen, McDermott, & Still, 2002; King et al., 2006). Reframing is the art of stepping back from the current frame or lens through which one is viewing a situation, reconsidering that frame, and reconstructing a new frame, as the adage recommends: "Life may not be the party we hoped for. But while we're here we should dance."

Reframing is illustrated by a flyer from the Canadian Association for Community Living: Superimposed over a full-page photo of a school-age boy with Down syndrome, the caption reads, "Chances are he'll never cure cancer, walk on the moon, or be Prime Minister. Then again, neither will you."

Reframing is also illustrated by a case study of a pair of identical twins who were raised apart (Neubauer & Neubauer, 1996). That is, through adoption, each twin was raised in a different family. When one of the adoptive mothers was asked if her adopted child was a picky eater, the mother responded with frustration, consternation, and exasperation, saying something akin to, "Oh! My goodness, yes!" She is such a picky eater! She won't eat anything unless – unless – I put cinnamon on it. She wants to have cinnamon on everything she eats. It's bizarre, and it tries my patience on a daily basis."

When the adoptive mother of this child's identical co-twin was asked the same question about her adopted daughter's eating habits, she responded calmly and evenly, with a response such as, "No, she's not a very picky eater at all. In fact, she's a great little eater, with a very healthy appetite. I bet she'd eat just about anything — well, just as long as I put some cinnamon on it." This cinnamon anecdote illustrates the heart and soul of the concept of accommodation, which is the last topic I spoke about.

Diverse Brains

By *Morton Ann Gernsbacher, PhD*

..... Continued from previous page

Society Should Accommodate Brain Differences

Accommodation is key to supporting disability and enabling the diversity that disability affords. We can classify accommodations into two broad categories. There are accommodations such as curb cuts, which were initially established to level the playing ground – literally level the playing ground – for one minority group, namely persons with mobility disabilities. But in reality, although curb cuts have been incredibly important for improving the mobility of wheelchair users and scooter users, look at any street corner, and you'll see that the overwhelmingly vast majority of persons who benefit from curb cuts are not persons with disabilities, but rather bicyclists, people pushing strollers, and people pushing dollies.

Similarly, closed captions have been incredibly important for improving access to entertainment and education for deaf and hard of hearing people. But the majority of people who benefit from captions are not deaf or hard of hearing. Rather, the majority of people who benefit from captions are hearing people – and not just hearing people at bars, airports, or work cubicles who want to watch YouTube without getting caught by their boss.

Numerous studies show that captions increase literacy skills for hearing children learning to read (Linebarger, 2001; Linebarger, Piotrowski, & Greenwood, 2010). Other studies show that captions increase language comprehension skills for hearing persons learning a second language (Garza, 1991; Neuman, & Koskinen, 1992). And still other studies show that captions increase language comprehension and memory for hearing people of all ages (Bean & Wilson, 1989; Griffin & Dumestre, 1993; Kruger & Steyn, 2013).

Indeed, every study ever conducted demonstrates that captions are beneficial to a wide range of hearing people because bimodal redundancy almost always trumps unimodal presentation (Bird & Williams, 2002; Hinkin, Harris, & Miranda, 2014).

In contrast to accommodations like captions and curb cuts, which although implemented initially to aid only disabled people are now used predominantly by non-disabled people, are accommodations that remain specific to a disability, such as Braille for blind people and sign language for deaf and hard of hearing people. Accommodations, like Braille and sign language that remain specific to disability groups are often, still shrouded, in stigma.

> ***Accommodation is the key to supporting diversity; without accommodation we cannot level the playing field for our diverse society.***

A prime example of the stigma that still surrounds disability-specific accommodations is provided by hearing aids. A 2014 article on the Mayo Clinic's website provides potential hearing aid consumers with the following advice: "Perhaps you've thought about getting a hearing aid, but you're worried about how it will look." The article explains: "All hearing aids contain the same parts to carry sound from the environment into your ear. However, hearing aids ... differ in size ... Some are small enough to fit inside your ear canal, making them almost invisible."

The Mayo Clinic article further explains that in general, the smaller a hearing aid is, the less powerful it is, the shorter its battery life, the harder it is to use, and the more it will cost. Yet, that is what the Mayo Clinic, as well as every other hearing aid website I have perused, assumes that consumers prioritize: the least visible hearing aid. Can't we, as a society, agree to not be prejudiced about the visibility of a person's hearing aid? I think we can, given the strides, all puns intended, that we as a society have made in overcoming prejudice about the form of prosthetic limbs.

For centuries, the overarching goal was to create a prosthetic that most closely resembled a flesh limb. But prosthetics that prioritized the superficial aspects of a flesh limb, were bulky, often quite uncomfortable, and not very functional (Oatman-Stanford, 2012). We now prize function over form.

Indeed, some prosthetic wearers like Dan Horkey, who runs a business creating "prosthetic tattoo art" want their prosthetics to be noticed. After avoiding showing his prosthetic for two decades, decorating it was a way to be proud of it, Horkey said. "It was instant – it just made me feel good. When I walked around in public, people wouldn't look away and avoid eye contact. Instead it would provoke compliments. I was proud of my leg for the first time" (Perez, 2013). Kiera Roche wears a floral prosthetic leg, sculpted by hand, because "it's personal, it's a fashion statement" (Schweitzer, 2012).

Speaking of fashion brought me to clothing tags. For years, persons like me, persons with enhanced tactile sensitivity, what diagnosticians call "sensory defensiveness," told garment producers that clothing tags were annoying (Goldsmith, van Hulle, Arneson, Schreiber, & Gernsbacher, 2006). For such persons, our only recourse was to perform meticulous apparel surgery, being careful to remove each offending tag without creating a hole in its garment. But a few years ago, clothing manufacturers finally listened to this neural minority of consumers, and guess what they learned? Like curb cuts and captions, it is not only a minority of people who benefit from the accommodation, it is a lot of people (Murphy, 2011).

Lastly, I turned to discuss one more accommodation, quite familiar to those of us on university campuses. As chair of my University's Committee on Access and Accommodation in Instruction, I have received a lot of boots on the ground experience with regard to accommodating diverse brains. The most frequently requested accommodation made by students at my university is not Braille or sign language, which is not surprising, because the most frequent disability among students at my university, and most other universities, is not visual or hearing disabilities.

Continued on next page...

..... Continued from previous page

Indeed, at my university, students with vision disabilities comprise less than 2% of the population of students with disabilities. And students with hearing disabilities comprise less than 3%, as do students with the disability of autism. Students with mobility disabilities comprise 7% and students with chronic health disabilities comprise 13%. The highest frequency disabilities on my university campus and other campuses are learning disabilities, such as dyslexia and ADHD, and the most frequent disabilities are psychological disabilities, such as anxiety and depression.

Therefore, it is not surprising that the most frequently requested accommodation is not Braille, not sign language, and not curb cuts. It is extended time on in-class exams and tests, what is often called 'time and a half.' But the terms, extended time and time and a half, are misnomers. When students request extended time or time and a half, what they really want is to take the quiz or exam without the pressure of being timed. From everything we know about the psychometrics of testing, these students are barking up the right tree.

Psychometrically, tests can be classified into speeded tests, which as the name implies, test how rapidly the examinee can complete all of the items, and power tests, which are designed to measure the examinees' power – their skill or knowledge, regardless of speed of performance (Gulliksen, 1950).

Because speeded tests are timed, speeded tests typically contain more items than every examinee can complete during the testing time. Therefore, the number of items completed during a fixed period of time is expected to vary among examinees. In contrast, power tests have no time limit whatsoever. All examinees are allowed as much time as they need. All examinees are not expected to answer correctly all items on a power test, but that is not because they run out of time. Rather it is because they do not know the information.

Most of us who teach on college campuses assume when we administer an in-class test, we are administering a power test, not a speeded test. We assume we are measuring how well the students have learned the material and how skillfully they can apply what they have learned. But if an in-class exam has a stop time, it is by definition a speeded test.

When students request extended time or time and a half, what they are really requesting is not to feel the pressure of time ticking off; not to experience anxiety about running out of time; not to have a power test administered as a speeded test. And just like curb cuts, captions, and tagless clothes, power tests, that is, tests without time limits, aid everyone.

Numerous studies across all age ranges, indicate that removing time limits not only decreases students' anxiety, but also increases the tests' validity and reliability (Attali, 2005; Elliott & Marquart, 2004; Lovett, 2010; Lu & Sireci, 2007; Scrams, & Schnipke, 1999). A decade ago, the tenth version of the Stanford Achievement Test removed all time limits for all of its subtests. This decision was based on data from 360,000 students (Brooks, Case, & Young, 2004).

Therefore, if you use in-class exams, and you too want to measure power, I have two suggestions: Either allow all students to remain as long as they want to finish every exam, or if that is infeasible, design exams that last no longer than two thirds of a class period, and tell students that. Announce to all students that everyone is welcome to remain for the entire class period, if they so desire. You will be accommodating all students, those with and without disabilities, and you will be increasing the validity and reliability of your exams (Attali, 2005).

Students, use that extra time, to review your answers and change them if you are not sure. Every research study in the literature shows that the majority of changes on tests are from wrong to right, rather than right to wrong (Fischer, Herrmann, & Kopp, 2005; Higham & Gerrard, 2005; Lynch & Smith, 1975; McMorris, DeMers, & Schwarz, 1987; Schwarz, McMorris, & DeMers, 1991; Vispoel, 1998).

Division One Crossword Puzzle

Author: Stephanie Schwartz, *St. John's University*

ACROSS

2. Using successive approximation to gradually reinforce behavior tendencies in a desired direction
5. Part of the brain that deals with emotions
7. Core units of the nervous system
11. The adjustment of people's behavior, attitudes, and beliefs to a group
13. _____ desensitization
18. Initials that identify a dimplomat in psychology
23. A relationship or association between two variables, scale of -1 to +1
25. Promoted a form of person-centered psychotherapy
26. Founder and first president of APA
29. Animal researchers who stressed the importance of critical periods and early experience
30. Freud's therapeutic approach
32. First psychology laboratory at Harvard (1875). William _____
33. Ability of a test to produce similar results over time
34. Seligman's Psychology
36. A proposed relationship between two variables
38. A type of intelligence that includes identifying the emotions of others
39. Young-Helmholtz theory
41. Goal-oriented, humanistic psychologist, stressed organ inferiority
42. Knowledge is derived through experience
43. School of psychology founded by John Watson
46. Increases the likelihiood that a response will occur
47. Immersion into the feared situation as an intervention to decrease the feared response
48. Tendency for the body (person) to want to maintain a state of constancy
50. First woman to receive a PhD in psychology
52. Ability to identify previously encountered information
53. Mental shortcuts that guide us in problem solving and decision making
55. The study of the meaning of words/combinations/sentences
56. An individual's pattern of behavior, thoughts, motives, and emotions; consistent over time
57. First woman president of APA
58. First psychology laboratory. Wilhelm _____
59. Openness, conscientiousness, extroversion, agreeableness, neuroticism

DOWN

1. Disorder characterized by the inability to use language
3. The ninth International Congress of Psychology held here
4. Ability of a test to measure what it purports to measure
6. _____ Münsterberg; author of "On the Witness Stand"
8. Titchener's version of voluntarism
9. Items under consideration in a study; can change
10. First African American woman to receive a PhD degree in psychology
12. Competing school to structuralism
14. The average of a set of numbers
15. A form of learning; classical _____
16. Considered the founder of the phrenology movement
17. Genetically identical twins
19. First International Congress Meeting Location
20. Smallest unit of meaning in a language
21. Repeated behavior as a penalty for inappropriate behavior
22. Mediates id and superego
24. In Piagetian theory using existing ideas in new situations
27. Part of the brain involved in memory
28. Individual cells which receive, integrate, and transmit information
31. The founder of school psychology
35. Tests that use unstructured or ambiguous stimuli
37. Studied memory using nonsense syllables
40. Variable that is manipulated
44. Drug that speeds up activity in the central nervous system
45. An involuntary response
47. Created the formula: S= k log P
49. Strategy which helps us hold information; group things together
51. _____ von Helmholtz
54. The co-author of "Studies of Hysteria" (1895)

New Book Releases from our Members

Women and Aging

An International, Intersectional Power Perspective

Edited by Varda Muhlbauer, *Netanya Academic College*, Joan C. Chrisler, *Connecticut College*, & Florence L. Denmark, *Pace University*

This book is focused on women over 60, a group who have pushed against age and gender restrictions and challenged the traditional construction of gendered age identity and stereotypes. The authors of the chapters take a feminist/power perspective as they examine such topics as body image, economics and purchasing power, multiple roles, leadership and encore careers, sexuality and romance, older lesbians, and clinical interventions to empower older women. The book includes a foreword by Jamila Bookwala.

David S. Moore, Ph.D. , Professor of Psychology
Pitzer College and Claremont Graduate University
Claremont, CA 91711

I am pleased to announce the release of my new book, The Developing Genome: An Introduction to Behavioral Epigenetics (Oxford University Press, 2015). Behavioral epigenetics is important because it explains how our experiences get under our skin and influence the functioning of our genes. Because research in behavioral epigenetics has demonstrated that experiences influence genetic activity, this work has the potential to change how we think about nature, nurture, and human development. My goal in writing this book was to offer an introduction to this emerging field, which would be useful to any interested party, from undergraduates to established research scientists. As such, the book is structured to allow readers without a strong background in biology to understand the momentous implications of behavioral epigenetics; at the same time, specific chapters offer readers with more training in biology access to the latest molecular details associated with this ascendant discipline. In addition to critical background information, the book has dedicated chapters on topics such as stress, memory and learning, the effects of abusive parenting, nutrition, and transgenerational inheritance.
Please feel free to contact me if you have any questions!

Member Profiles

David S. Moore is a Professor of Psychology at Pitzer College and Claremont Graduate University in Southern California. He received his B.A. in psychology from Tufts University and his M.A. and Ph.D. in developmental and biological psychology from Harvard University; he also completed a postdoctoral fellowship at the City University of New York. He is a developmental cognitive neuroscientist with expertise in perceptual and cognitive development in infancy. His empirical research has produced publications on infants' reactions to infant-directed speech, on the development of spatial cognition, and on infants' rudimentary perception of numerical quantities. His theoretical writings have explored the contributions of genetic, environmental, and epigenetic factors to human development. His first book, The Dependent Gene (2001), was widely adopted for use in undergraduate education, was translated into Japanese, and was nominated for the Cognitive Development Society's Best Authored Volume award. His new book on behavioral epigenetics, The Developing Genome, was published by Oxford University Press in 2015. For more information on his new book, see the announcement in this newsletter!

Dr. Hanley is a Licensed Clinical Psychologist in Michigan who works with adults, adolescents, children, and couples. He specializes in outpatient psychotherapy with individuals struggling with depression, anxiety, relationship issues, addictions, trauma, and more. In addition to his psychotherapy work, Dr. Hanley is an Adjunct Instructor at the University of Detroit Mercy. He has taught undergraduate and graduate courses in Adult Development and Aging, Death and Dying, and Personality Disorders. He has published in the areas of self-actualization, psychoanalytic theory, and psychotherapy. Dr. Hanley has a warm demeanor and a particular knack for helping people figure out what has gotten in the way of living happier, less conflicted, and more fulfilled lives. His training includes a Ph.D. in clinical psychology from the University of Detroit Mercy, a B.A. in psychology from the University of Michigan, and extensive post doctorate training in psychoanalytic theory and practice. He takes an eclectic and client-centered approach to his work.

General Psychology Trivia Quiz: Part 2 **Answers**

1. B(urrhus) F(rederic) Skinner.
2. Margaret Floy Washburn, 1894, from Cornell University.
3. Columbia University. (Harvard is second.)
4. His book "The Principles of Psychology" published in 1890.
5. Edward Thorndike wrote this to James McKeen Cattell after reviewing G. Stanley Hall's Adolescence (1904).
6. Lucy May Day Boring, the wife of psychology historian E. G. Boring and a psychologist in her own right, was a few weeks shy of her 110th birthday at the time of her death.
7. Stanford University.
8. Anna Berliner who received her doctorate in 1914, near the end of Wundt's career.
9. Edward B. Titchener's brain is on display outside the Psychology Office in Uris Hall, Cornell University.
10. Harry Harlow.

Bonus Question:

11. The French Chef, Julia Child. In fact, many of her later TV shows were broadcast from the house. .

Readers are encouraged to submit their favorite psychology trivia to John Hogan at hoganjohn@aol.com. If their trivia is used, they will be acknowledged in a future "answer' section.

Division One Crossword Puzzle - Answers

Author: Stephanie Schwartz, *St. John's University*

American Psychology Association (APA)
Society for General Psychology

Quote from Morton Ann Gernsbacher, PhD:

"These studies show that the brains of blind people are amazingly flexible organs. They take that prime brain real estate known as the occipital lobe, and they use it for other functions, like higher-order reasoning, judgment and decision-making, and spoken language comprehension. From my vantage point, that discovery provides a stellar model for how we as neuroscientists can more fruitfully go about studying brain differences."

Thank you to those who signed up with our online subscription! Currently, the most popular theme is *The Myth of the Golden Years* for Fall 2014. Eating Disorders, Racism/Prejudice and Parenting/Fatherhood/Single Families tied for second, third and fourth respectively. If you have not signed up with our newsletter, please do so now:

https://division1apa.wufoo.com/forms/m1isbaac0l7bqe7/

Our theme will coincide with the celebration of our 70th anniversary. Details will be sent out in July. Submission deadline for Fall Newsletter: **Friday September 4th**. Please do not hesitate to contact me if you have any questions/concerns (ali.trot@gmail.com).

See you in Toronto for the 70th Anniversary of Division 1!

It may be that we are puppets-puppets controlled by the strings of society. But at least we are puppets with perception, with awareness. And perhaps our awareness is the first step to our liberation.

Submission Guidelines for
Peer-reviewed Research Articles & Theoretical Reviews
International Psychology Bulletin

The *IPB* publishes peer-reviewed research articles and theoretical reviews that focus on important issues related to international psychology. The review process takes approximately two months.

Please submit the following three documents in Microsoft Word format to Dr. Vaishali Raval at ravalvv@miamioh.edu:

- A cover letter
- A title page with the title of the manuscript, author names and institutional affiliations, and an author note that includes name and contact information of corresponding author
- A blinded manuscript that does not include authors' names or any identifying information

Cover letter

- In your cover letter be sure to include the author's postal address, e-mail address, and telephone number for future correspondence
- State that the manuscript is original, not previously published, and not under concurrent consideration elsewhere
- State that the manuscript adheres to APA Ethical Principles (Ethical Principles of Psychologists and Code of Conduct), and all co-authors are in agreement about the content of the manuscript
- Inform the journal editor of the existence of any published manuscripts written by the author that is sufficiently similar to the one submitted (e.g., uses the same dataset).

Blinded Manuscript

- Prepare manuscripts according to the *Publication Manual of the American Psychological Association (6th edition)*.
- Check APA Journals Manuscript Submission Instructions for All Authors
- The entire manuscript should be formatted in 12-point Times New Roman font, 1 inch margins, and double-spaced submitted as Microsoft Word document. The entire manuscript should be up to 4000 words.
- The first page of the manuscript should include a title of the manuscript (no more than 12 words)
- The second page of the manuscript should include an abstract containing a maximum of 250 words, followed by up to five keywords brief phrases
- The remaining pages should include the text of the manuscript. For research articles, include introduction, method, results, and discussion. The format of a review paper will vary, and may include a brief introduction to the topic, review of the literature, and conclusions and future directions.
- Provide a full reference list as per the *Publication Manual of the American Psychological Association (6th edition)*.
- Present tables and figures as per the *Manual, if you have any, at the end of the manuscript.*
- Review APA's Checklist for Manuscript Submission before submitting your article.

Upon acceptance

Please note that if your article is accepted for publication in *International Psychology Bulletin*, you will be asked to download the copyright transfer form, complete and sign it, and return to the editor (ravalvv@miamioh.edu) before the manuscript can be published.

Welcome From the Incoming Division 52 President

Mark D. Terjesen, Ph.D.
APA 2015 Division 52 President
terjesem@stjohns.edu

I would like to express my appreciation and excitement to serve as your 2015 President of Division 52 of the APA. I have thoroughly enjoyed being part of the division and am honored that you selected me to serve in this challenging position. I have benefitted greatly from the support of many colleagues and divisional leaders, but really want to acknowledge and thank our immediate past-President, Dr. Senel Poyrazli. Senel was a consistent guiding force for the division this past year. I learned a great deal from her and am pleased to call her a friend.

I looked back at my nominating statement to remind myself what I said 18 months ago when I decided to run for president of Division 52. I wanted to take this opportunity to briefly discuss my background, what led me down the international psychology path and what my goals are for the upcoming year. If I get poetic license to change the title of a popular children's' book, my interest in international psychology came about through "*A Series of Fortunate Events*".

Having earned my doctorate in clinical and school psychology I was fortunate enough to get a position as a faculty member at St. John's University in Queens, New York. Queens county is the most diverse county in North America and I found that I would often learn from our students about how psychology is seen from an international perspective. At the beginning of my career, I recall using the terms "international psychology" and "cross-cultural psychology" interchangeably, but quickly learned the important distinction. Having had the opportunity to train with Dr. Albert Ellis, the founder of Rational Emotive Behavior Therapy (REBT), I was asked by the Albert Ellis Institute to provide a number of international trainings over the past 15 years. What I quickly found was that I needed to give up my "Western creation philosophy" that the areas of clinical assessment and intervention started and ended in the United States. I learned a great deal from my travels about the history of psychology from an international perspective. This began to impact upon my research and teaching while increasing my interest in international psychology.

My interest in international psychology was further piqued by a former Dean at my university who gauged my interest in working with faculty at a University in Vietnam to develop the first school psychology program. This has probably been the most personally meaningful professional activity of mine, as it allowed me to bring my knowledge of school psychology to Vietnam and learn from and collaborate with faculty there to build something that is sustainable. I am hopeful that this will have a long-term impact on the educational and social development of youth in Vietnam.

My colleague and friend at St. John's, Dr. John Hogan (past president of Division 52) was influential in getting me involved in the Division and continues to educate me about the decidedly international focus of psychology from the beginning. By becoming involved in the division I have witnessed first-hand the dedication and commitment of many individuals to the field of international psychology and the opportunities to "build bridges" (to borrow from Division 52 Past-President Dr. Mercedes McCormick). One would think that with individuals from very diverse backgrounds both geographically and professionally that there would be a potential for these differences to cause friction within the division. I have found the opposite to be true within the division, as the individuals that I have had the opportunity to work with have been caring and supportive, and I actively encourage others who are considering becoming involved in the division to do so. I believe that while my formal education may have ended almost 20 years ago, I continue to learn and understand the true internationalization of psychology. I often find myself considering: where will the future of international psychology go?

When you look at the field of psychology, international psychology is everywhere! The membership of the APA is becoming more international (7000 international members at last estimate) as are those who attend the conference (about 600 yearly) (CIRP, 2014). Further, the APA graduate student association (APAGS) has an active international email list. The growth in the published literature is quite impressive, with a 27.5% increase in citations that come up after the search "international psychology" for the last five years *in comparison* to the previous ten. In addition to our excellent division journal, many divisions of the APA have international committees (14 of the 56 divisions at last count) and many dedicate a special section of the journal to an international theme.

In trying to understand this growth and interest in international psychology, I imagine that there are many variables that may be predictive of this. I am of the belief that there is one variable that directly and indirectly contributed to this: technology. In society as a whole, we are at quite an interesting time with regard to how technology has afforded us better access to information as well as an opportunity for researchers to understand more about the human condition from a medical model to a psychological one. The opportunity to share resources through advanced technological tools for data collection and analysis may help us answer some age-old questions related to psychology as well as create new ones. I am highly skeptical that any of the projects that I have done with my international collaborators could have been done in the absence of technology as it is today. While the reflection of the blue screen of Facebook on my students glasses while I teach may frustrate me, I think we have to recognize the power of social media and embrace these technological advances to further international psychology and our division. The use of technology to further education can be seen in the expansion of the Massive Open Online Courses (Moocs). In 2014, the number of MOOCs doubled to over 400 universities with a doubling in the number of cumulative courses to 2400. These courses are being offered from 22 of the top 25 US universities in US News World Report rankings and social sciences makes up approximately 6% of the course offerings (Shah, 2014).

Given these advances and the potential benefit for our field, technology to promote international psychology will be my theme for my Presidential term. I want our division to *make technology matter* to further international psychology education, practice, and research. I want us to consider how do we bring technology into the classroom, how might technology be utilized to foster international practice, and share resources and information to develop collaborative research programs. Drs. William Pfohl and Monica Thielking are serving as our program chairs and have actively worked to promote this within the conference. The division has a technology task force that we hope will continue to build our divisions' use of technology. The Early Career Psychologists subcommittee successfully launched our first Division sponsored webinar this past December. Division 52 along with Division 2 and Psi Chi received an APA grant to promote the internationalization of "Project Syllabus" to encourage the submission of syllabi from different countries and in different languages.

So much like international psychology is everywhere, so is technology. I am hopeful that many of you will continue to embrace technology while also considering how it can be expanded within the division as well as in the field of international psychology. I am grateful to be able to serve the division as President this year, I look forward to working with many of you and am hopeful that I am able to support your faith in me.

International Research Award for Graduate Students in Psychology

Call to students engaged in international psychology research!

Division 52, International Psychology, is offering an International Research Award for graduate students in psychology. This award has been established to encourage and recognize promising graduate student research in international psychology.

On or before Sunday midnight (PST), **May 3th, 2015**, interested students should submit:

- Four page double-spaced summary of research that describes the purpose, method, analysis, results, and discussion of your international research (excluding references and one table or figure). Please also exclude all identifying information on research summary document.
- Curriculum Vitae.
- One-paragraph email endorsement from faculty research advisor/sponsor providing:
  - Endorsement for the award;
  - Confirmation that research was an independent project, thesis, or dissertation effort conducted during graduate program; and
  - Assurance of student's good standing in the graduate program.
- Two-paragraph cover email from the student:
  - First paragraph should provide: contact information (email & phone), name of graduate program and research advisor, year in the program, expected graduation date, as well as member status with Div. 52. Student must be a member of Div. 52 as of application deadline.
  - Second paragraph should assure the committee that student's independent research project, thesis or dissertation is nearing completion and that student is not applying simultaneously for another similar APA research award. At least preliminary analysis and results must have been completed by May 2015.

Please note that submissions exceeding the paragraph or page limits will be disqualified.

Email all application materials BEFORE MIDNIGHT, Pacific Standard Time, on **MAY 3, 2015**, to the Chair of the Division 52 Student International Research Award: Daria Diakonova-Curtis, PhD, St. Petersburg State University; E-mail: daria.diakonova@gmail.com

The two-tiered blind rating process is designed to will evaluate the award applications under double-blind review based on: (a) the degree of relevance to international psychology, (b) progress to completion, (c) adherence to APA Style, (d) originality of research, (e) clarity of design and method, (f) complexity of analysis, (g) quality of findings, (g) recognition of limitations, (g) insight in the discussion, and (h) brevity and clarity.

Awardees will be notified no later than Monday June 8, 2015, awarded in person at the Division 52 APA Convention awards ceremony in Toronto, Canada, and featured in an issue of the International Psychology Bulletin.

Call for Nominations APA Division 52 Henry David International Mentoring Award

Henry David was a founding member of Division 52 and a significant contributor to international psychology. In honor of his contributions, Division 52 established the Henry David International Mentoring Award. The recipient of this prestigious award will be honored at the 2015 APA Convention in Toronto. Nominations, including self-nominations, are welcomed. The Division 52 Henry David International Mentoring Award is presented annually to a member or affiliate of Division 52, who plays an exceptional mentoring role in an international context. Mentoring may be defined by any of the following activities:

(1) A psychologist who has served as a mentor for international students or faculty member for at least three years.

(2) A psychologist who has mentored students in the area of international psychology, by training, educating, and/or preparing students to be active participants in international psychology.

(3) A senior psychologist who has mentored early career psychologists who are now functioning as international psychologists.

OR

(4) An international psychologist working outside of the United States who serves as a mentor on his/her campus or at his/her agency.

Nominations should include a cover letter, vitae, and at least 3 letters of endorsement from former or current mentees. **Questions about the application procedure and nominations should be emailed to the Henry David International Mentoring Award Committee Chair, Lawrence Gerstein at lgerstein@bsu.edu.** The Committee will review the nominations. The Committee's recommendation will be reported to the Division 52 Board of Directors. **The deadline to submit materials is April 1, 2015.**

Abstract

The purpose of this exploratory study was to analyze definitions of "rights" from the Global South, which has been too often neglected by researchers addressing constructs with universal implications. A convenience sample of 747 participants from Brazil, Colombia, The Philippines, India, Algeria, and Ghana, which were once colonies of Western nations, provided definitions in their own words of the term "rights." These definitions were coded for basis (inherent, legal, or moral), nature (freedoms, rights, or other specifications), and outcome/function/purpose. Basic descriptive analyses indicated that the basis of rights was more often described as inherent or moral than legal, and that the nature of rights more often took the form of individual freedoms and social duties to the individual than of individual duties to society or the government. Our findings suggest a common core in conceptions of rights, with subtle variations across countries in some of the elements of those conceptions. They also add normative support from the overlooked Global South for the salience of human rights, and may contribute to the development of peace protocols that incorporate local definitions of individual rights and institutional responsibilities. Finally, they suggest that future research, as well as interventions aimed at peacekeeping and supporting human rights, should focus more on the fostering of universal human values and ethics and less on policy and governmental action, regulation, and law.

The United Nations Declaration of Human Rights, adopted by the United Nations General Assembly on December 10, 1948, is a remarkable document, globally revolutionary on several points. First, it anchors the foundation of human rights in "the equal and inalienable rights of all members of the human family"; thus, in regard to the longstanding debate as to whether human rights are inherent in every human or derive from legal documents promulgated by appropriate authorities, the Universal Declaration comes down solidly on the inherency of human rights. However, the Universal Declaration also indicates that "human rights should be protected by the rule of law" and that not only are people

born "free and equal in dignity and rights," but are also "endowed with reason and conscience and should act towards one another in a spirit of brotherhood." Thus, the document adds a moral as well as a legal dimension to the foundations of human rights. Second, this crucial document, originally named the Declaration of Human Rights and Freedoms, enshrines at least three fundamental types of freedom: freedom to have, freedom to do, and freedom from inhumane and unjust behavior from ruling parties.

The universality of human rights is made explicit in the Universal Declaration, and talk of human rights and human rights violations is part of the contemporary global discourse. However, rarely have ordinary people around the world been asked to provide, in their own words, their personal beliefs, understandings, and definitions regarding human and governmental rights. In particular, researchers have paid little attention to the Global South, which is an area that has been subjugated and exploited by Western powers since colonial times. The Global South has also been afflicted by violence and oppression from within, as members of privileged classes often oppress their poor and disenfranchised counterparts. With the exception of the work done by the Group on International Perspectives on Governmental Aggression and Peace (GIPGAP), little voice has been given to individuals afflicted by violence in the Global South. The GIPGAP provided a platform to researchers by publishing a four volume series on *State Violence and the Right to Peace* (Malley-Morrison, 2009a, b, c, d), the *International Handbook on War, Torture, and Terrorism* (Malley-Morrison, Hines, & McCarthy, 2013) and the *International Handbook on Peace and Reconciliation* (Malley-Morrison, Mercurio, & Twose, 2013). The current study, which grows out of that larger international collaborative project, is an exploratory study of definitions of "rights." In particular, we investigated lay persons' definitions of rights from an idiographic approach with a focus on their phenomenological understanding; a major goal was to give voice to a part of the world that has long been neglected in comparison to the richer and more powerful countries of the northern hemisphere.

Learning more about contemporary understandings of human rights in the Global South seems particularly important. According to Nault (2011): 1) The common emphasis on human rights as a Western invention neglects the contributions arising out of resistance in the Global South to Western imperialism; 2) Global South countries made larger contributions to the United Nations Charter and the Universal Declaration of Human Rights than is generally recognized; 3) "Examples of human rights abuses linked to Western nations' domination of their formal and informal empires are too numerous to recount..." (p. 13); and 4) much of the Global South continues to be subject to human rights abuses (e.g., human trafficking, in which Western organizations and governments have been complicit). Moreover, research with young people from Western countries such, as Canada, indicates that they view human rights problems as more of an issue in "Third World" and in former Soviet Union countries than in the West (Moghaddam & Vuksanovic, 1990), with very little understanding, we suggest, of the role the "developed" countries have played in the abuses experienced in those "developing" countries.

Perspectives on the Universality of Human Rights

It would be difficult to establish empirically that human rights are "inherent" in human beings; however, several researchers have made the case that human rights have a normative basis that is prior to their codification in conventions and legal and judicial documents. Doise (2003), for example, argued that there is considerable evidence supporting the idea that human rights are much more than just legal rights. Spini and Doise (2005) asserted that declarations of human rights are formal expressions or codifications of principles built into (inherent in) human interactions. Moghaddam (2000) made a similar argument, stating that certain fundamental relations (e.g., cooperation) are inherent in human social life and predate legislated ("black letter") rights and duties.

Much of the research conducted by Doise and associates consists of survey research, often of multi-national samples, to explore the nature of lay theories of human rights and duties, and the extent to which these lay theories correspond to those of experts. In one survey of participants from 35 countries from the Americas, Africa, Asia, Europe, and the Pacific, Doise, Spini, and Clémence (1999) found that participants from those diverse regions shared similar understandings and evaluations of various articles in the Universal Declaration of Human Rights. For example, in each national group there was greater agreement with the most basic rights (freedom from torture and slavery) than with such social and economic rights as equal access to public services and opportunities to rest and leisure.

The counterpart of universalism is cultural specificity. As Hoppe-Graff and Kim (2005 p. 53) point out, "rights and duties may mean different things in different cultures." In their study of definitions of rights from adolescents from an individualistic culture (Germany) and a collectivistic culture (Korea), they found that the German teens were more likely than the Korean teens to equate rights with being permitted by an authority to do something, whereas the Korean teens were more likely to associate rights with feelings of obligation, responsibility, being respected, and being treated correctly. Hoppe-Graff and Kim also emphasized that underlying the understanding of rights in young persons from both cultures were the concepts of self-determination, obligation, and responsibility.

Rights and Duties

As is true in regard to rights, there has been a growing effort to establish the universality of duties and an argument for the inherency of duties in human interactions. For example, Moghaddam, Slocum, Finkel, Mor, and Harré (2000) described duties, like rights, as having their origins in long-standing social psychological aspects of social interactions. In their "cultural theory of rights and duties," Moghaddam and Riley (2005) suggested that a small number of basic universal rights and duties emerge from "primitive social

practices" such as turn taking (p. 78).

To explore nuances in the balance between rights and duties, Moghaddam and Finkel (2005, p. 281) recommended using "qualitative methods and critical assessment" rather than traditional survey methods. Following their recommendations, the present study utilized qualitative techniques to assess definitions of rights in areas of the world very much neglected by Western researchers (i.e., areas of the Global South subjected to long-lasting human rights violations both from imperialistic occupiers and anti-colonial revolutions that failed to bring about fundamental changes in the rights and perceived duties of civil society in those countries). In particular, we addressed the following research questions: Would samples from the Global South characterize rights as inherent, legal, or moral? Would their definitions emphasize freedoms or duties? Or would their spontaneous and personal definitions utilize constructs quite different from those addressed, however meagerly, in Western social science literature? Given that the international organizations most concerned with ensuring "rights" have adopted a universalistic conception of inherent human rights, it seems important to consider the extent to which that universalistic conception has validity for parts of the world where large portions of the population were long considered to have no rights.

Method

Participants

A convenience sample of 747 participants was recruited largely through snow-balling techniques from six Global South countries formerly occupied by Western nations: Brazil (Portugal), Colombia (Spain), The Philippines (Spain, Japan, and the United States), India (England), Algeria (France), and Ghana (England and the Netherlands). See Table 1 for age and gender information by country.

All participants responded, in writing, to the Personal and Institutional Rights to Aggression and Peace Survey (PAIRTAPS), generally in their home countries, with the survey available both in English and in a native language (Portuguese in Brazil, Spanish in Colombia, Filipino in the Philippines, English in India, Arabic in Algeria, and Ewe in Ghana[1]). Each translation was done by a native speaker of the language and checked by at least one other native speaker in the country in which the survey was being administered. Discrepancies between translations were resolved through discussion in order to achieve consensus. The translations for the term "rights" were: *direitos* in Portuguese, *karapatan* in Filipino, حقوق in Arabic, and *derechos* in Spanish.

The 36-item PAIRTAPS survey, developed by the GIPGAP, includes rating scale and open-ended items regarding level of support for various forms of governmental aggression as well as items asking for definitions of terms such as "rights," "terrorism," and "justice." The survey took about 30-40 minutes to complete. For the current study, we focused only on the item asking participants to define the term "rights."

The methods by which the survey was administered and completed varied somewhat across countries. For example, in Brazil, surveys about "*direitos humanos"* were distributed by teaching assistants and students to peers, family, and associates, and completed anonymously, in writing, in Portuguese. Responses were then back-translated to English. The Philippine dataset was gathered through distribution of printed surveys, English and Filipino translations, in selected cities and schools in metro Manila, the Cordillera Region in the North, and Davao City in the South. A portion of the responses was also collected from the online survey. Three researchers in India recruited participants independently, using a number of different methods, including snowballing techniques in

Table 1
Demographics by Country

	n	Mean Age	Range Age	n Females	n Males	n Protestors
Philippines	256	30	18-69	155	98	46
India	230	31	18-75	95	132	42
Colombia	69	31	18-78	36	31	13
Brazil	105	26	19-69	79	24	26
Ghana	44	36	18-63	8	33	3
Algeria	43	25	18-48	27	16	10
Total	747	30	18-78	400	334	140

which the survey was sent to people via email, and the recipients were asked to fill it out anonymously and send it as an attachment to a "warandpeace" gmail account.

Coding

The coding system for the definitions of "rights" was derived in part by a grounded theory approach (Glaser, 1992; Glaser & Strauss, 1967), but informed by the literature regarding the inherency of human rights and the connection between rights and duties. Our approach was consistent with what Gilgun (2005) called *deductive qualitative analysis* and Mayring (2000) called *deductive category application*. Following exactly the steps outlined by Mayring, we began with a research question, identified the units of analysis (every unit of meaning rather than the entire definition), created main categories and subcategories, randomly selected an international coding manual sample from the full project sample, formalized definitions, selected examples, clarified coding rules, and incorporated all of this material into a coding manual. Our evaluation of intercoder reliability was a continuous process not accompanied by formal statistical assessment. Responses (translated into English) were coded by two of the co-authors of this paper (Gutowski from the United States and Estuar from the Philippines) with successive subsamples from each co-author also coded by the lead author (Malley-Morrison, from the United States) both to establish intercoder reliability and to assure consistency in the final codes assigned to each response. Discrepancies between coders were resolved through discussion and the coding manual was refined in places where additional examples and explanations of criteria improved reliability.

Three major sets of categories were identified in the qualitative responses: a) *basis*, b) *nature*, and c) *outcome/purpose/function*. Responses identifying a presumed source of rights were coded into one of three *basis* categories: *inherent*, *moral,* and *legal*. Consistent with the perspective of Hoppe-Graff and Kim (2005), we considered inherent and moral responses to be more internal in their orientation, and legal to be more externally oriented. The second set of categories, *nature,* included: *freedoms*, *duties*, and *other specifications.* The *freedoms* category, reflecting a major portion of the rights identified in the Universal Declaration, included subcategories for *freedom to have* (e.g., an identity), *freedom to do* (e.g., assemble), and *freedom from* (e.g., torture). The *duties* category had two subcategories: *social duties* (duties society owes to the individual) and *individual duties* (duties of the rights holder to the society). The *other specifications* category included subcategories for *entitlement*, *privilege*, *need*, and *unrealized ideal*. All responses in the final category, *outcome/purpose/function*, associated rights with positive outcomes, purposes, or functions (e.g., "democracy)."

For purposes of coding, definitions were first segmented into codeable units. For example, the definition "entitlements guaranteed by law" has two codeable units: 1) "entitlements" (coded into the *nature other specifications* category for *entitlements*) and 2) "by law" (coded into the *basis* category for *legal*). Generally, for purposes of analysis, two scores were computed—a presence/absence (1, 0) score depending on whether a particular code was or was not assigned to each codeable unit and, where appropriate, a count score indicating how many times a particular code was assigned to the codeable units within a definition. For ease of reporting, we refer to codeable units as "responses" in the remainder of the paper.

Results

Table 2 indicates by country the percentage of total responses (codeable units) falling into the different subcategories of the three major sets of categories (*basis, nature,* and *outcomes).* In the following sections, we provide examples of responses falling into major and subordinate categories, and elucidate response patterns in the Global South sample as a whole.

The Basis of Rights

Approximately 35% of all Global South responses to the definition of rights item were coded into one of the *basis* subcategories. Table 2 shows that at least 30% of the responses from every country sample identified a *basis* for rights, with Brazil having the highest percentage in this category. Within that major category, 41% of all Global South responses indicated that the *basis* for rights was *legal*; that is, rights were said to be something "granted" by a governing body. For example, according to one Indian man, rights are "conditions of living guaranteed to all individuals and communities by society at large." The Algerian sample had the largest number of *basis* responses coded into the *legal* subcategory, followed by Ghana, Colombia, Brazil, India, and the Philippines.

Thirty-two percent of all *basis* responses indicated that individuals possess rights by virtue of being human; that is, they described rights as *inherent*. For example, a woman from the Philippines stated, "These are not 'awarded' by any power; rather, these are inherent to human life and intrinsic to all human beings." The Philippines had the highest percentage of *basis* responses attributing an *inherent basis* to rights, with lower percentages from India, Colombia, Brazil, Ghana, and Algeria. A *moral* basis for rights (e.g., "norms that guarantee the integrity of the person") was identified in 27% of all *basis* responses, with Ghana and Brazil having the highest percentages and Columbia the lowest.

The Nature of Rights

Fifty-one percent of all Global South responses were coded into the *nature* category set, which included *freedoms, duties*, and *other specifications*. Responses coded into one of the *nature* subcategories accounted for at least 30% of responses in every country sampled, with the Philippines having the highest percentage and Brazil having the lowest.

Freedoms. Within the major *nature* category, 44% of all Global South responses equated rights with *freedoms*—something people are *free to have*, *do*, or *be protected from*. More specifically, the proportion of *nature* responses coded for freedom ranged from a high of 43% of responses in Ghana down to 14% in Brazil. The subcategory *free to do*, exemplified by a Brazilian woman who said that rights mean,

Note: The first column for each country (titled "% of [Country] Respon.") indicates the percentage of all national responses that identified a *Basis*, *Nature*, or *Outcome* subcategory within their definitions of rights (e.g., 3% of all Algerian responses attributed an *inherent basis* to rights).
The second column for each country (titled "% of Major Categ.") indicates the percentage of national responses coded under each major category set (*Basis*, *Nature*, or *Outcome*) that indicated a related subcategory within their definition of rights (e.g. 7% of Algerian responses coded under the major category *basis* indicated an *inherent* basis to rights).
Columns may not add up to 100 percent because of rounding.

"being able to speak and do what you believe" was coded most frequently for the *nature* responses from India, followed by Brazil and the Philippines, Colombia and Ghana, and Algeria. A smaller proportion of Global South responses within the *nature* category set were coded as *free to have.* An Indian man said, rights "include but are not limited to the right to food, the right to equality, etc.," and a Ghanaian man defined rights as "having access to natural and artificial wealth of the land." Participant responses categorized as *freedom from* (e.g., "antisocial" activities), which equated rights with protection from something unwanted, were relatively rare. Of all *nature* responses, only 3% were coded as *freedom from*; 6% were categorized as general *freedoms.*

Duties. Twenty-seven percent of Global South responses within the *nature* category set associated rights with *duties*, which included *social duties, duties of the rights holder,* and *duties* in general. By country, Algeria had the highest percentage of *duties* responses within the major *nature* category, followed by Columbia, India, Ghana, the Philippines, and Brazil.

Of all Global South *nature* responses, 13% had a theme of *social duty*, specifically, a duty of the state or society as a whole to the individual or an indication that rights cannot be taken away or infringed upon. A Colombian woman explained, "Rights are something we are given by our country that people should respect." Algeria had the highest percentage of *social duty* responses in the *nature* category set, and Ghana had the lowest. Examples of the second *duty* subcategory, *duty of the rights-holder* (e.g., "what an individual needs to do in society"), were found in 12% of all *nature* responses. The Algerian sample also had the highest percentage of *duty of the rights holder* responses in the *nature* cate-

-gory set, followed by Columbia, India, Ghana, Brazil, and the Philippines. Additionally, small percentages of *nature* responses from the Algeria, Ghana, and Philippines samples related rights with *duties* in general; however, this theme was not found in the responses from the other countries.

Other specifications. Twenty-nine percent of all *nature* responses were coded into the category for *other specifications* of rights, such as rights being an *unrealized idea, privilege, need,* or *entitlement.* Seven percent of these *nature* responses were coded into the subcategory *unrealized ideal*. As one Indian woman proclaimed, "Wish we could have them!!!!" The frequency of this theme within the *nature* responses varied greatly by country, with higher percentages from South America, lower percentages from Asia Pacific, and no examples from either African country. Six percent of all *nature* responses defined rights as a *privilege* (e.g., "opportunities to be enjoyed"), a theme found more frequently in the African samples than the others, which had fewer than 10% of responses coded for this theme. Seven percent of all *nature* responses described rights as a *need* (e.g., "necessary conditions for a normal life") and another 7% described it as an *entitlement* (e.g., "a person's due").

The Outcome of Rights

Outcome. Responses referring to a *positive purpose, outcome, function, or goal* of having rights constituted only 14% of the Global South responses. A Filipino man explained that rights "allow a person to live a full and human life" and a Colombian man stated that rights are "that which allows people to live in harmony." Columbia had the highest number of *outcome* responses, followed by India and Brazil, Ghana, the Philippines, and Algeria.

Modal Patterns within and across Countries

Based on frequencies of responses, Table 3 indicates by country the first and second most common major categories and subcategories found within participant definitions of rights. As can be seen, *nature* responses predominated in both the Global South sample as a whole and in all country samples except Brazil (where *basis* responses were most common). Within the *nature* category, themes focusing on *freedoms* predominated in the total sample and in all countries except for Colombia (where responses coded for *freedoms* were tied with responses coded for *duties*) and Algeria (where *duties* were predominant among the nature responses). For Brazil, *legal* and *moral* responses tied for the most common theme within the *nature* category.

The major category *basis* ranked second in frequency of responses in all national samples except Brazil, where *nature* was the second most common major category and themes emphasizing *other specifications* predominated. Among the responses coded into a *basis* category, the *legal* theme predominated in the total sample, Algeria, Ghana, and Colombia, and the *inherent* theme predominated in India and the Philippines.

Discussion

In the current study, we found that when asked to provide a personal definition of the term "rights," participants from six Global South countries emphasized the presumed foundations of rights. Although about one-third of those responses attributed a *legal* basis to rights, a majority of them, consistent with the Universal Declaration of Human Rights, identified the basis of rights as *inherent* or *moral*. Thus, to the extent that participants referred to foundations of rights, their beliefs provide some limited agreement with the views of Doise (2003) and Moghaddam (2000) that human rights are perceived as more than just legal rights.

Also consistent with the Universal Declaration, many participants associated rights with particular freedoms and the duty of society to insure those freedoms. Very few respondents mentioned any sort of duty of individual rights holders toward their governments or society. Specifically,

Table 3
Modal Definitional Categories and Subcategories by Country.

	Algeria	Ghana	Brazil	Colombia	India	Philippines	Total
Modal Major Category	Nature (54%)	Nature (55%)	Basis (46%)	Nature (42%)	Nature (53%)	Nature (62%)	Nature (51%)
Modal Subcategory	Duties (47 %)	Freedoms (43%)	Legal (38%)	Freedoms (36%)	Freedoms (49%)	Freedoms (45%)	Freedoms (44%)
			Moral (38%)	Duties (36%)			
Second Most Common Major Category	Basis (40%)	Basis (34%)	Nature (39%)	Basis (34%)	Basis (34%)	Basis (30%)	Basis (35%)
Second Most Common Subcategory	Legal (64%)	Legal (46%)	Other Specifications (45%)	Legal (45%)	Inherent (41%)	Inherent (44%)	Legal (41%)

20% of the Global South responses equated rights with the *freedom to have, to do,* or *to be protected from* something and 6% equated rights with *duty* on the part of *society* to the individual. Only 5% of all responses referred to *duty* on the part of the rights holder.

This emphasis on individual rights seems unsurprising in samples from countries long subjected to despotic rule by foreign powers and, in most cases, continued despotic rule following "independence." Moghaddam et al. (2000) have suggested that "after achieving equal rights in black-letter law, minorities should shift their focus to the correlative duties that arise from their change in moral status" (p. 275). Our Global South participants, although not minority groups within their own countries, might perhaps be persuaded that their "moral status" has changed, but feel quite unwilling to give up their fight for equal rights in practice. According to Rose (1996; cited in Moghaddam et al., 2000), rights cannot be exercised successfully until the people with the power to concede those rights accept it as a duty to enable them. Ordinary people in many Global South countries—and perhaps in many Western countries as well—may want to see more concessions regarding their rights before considering whether they have duties to the controllers of those rights.

Our study has the common limitations of a convenience sample such as limits to generalizability, compounded by difficulties with linguistic and conceptual equivalence of the various translations of the term "rights" into the different languages and of translations of the participants' definitions into English for coding. Data collection methods as well as heterogeneity of samples varied from country to country. Despite these limitations, the survey empowered ordinary people to define, in their own words, the term "rights" and provides rich qualitative data for the generation of new research questions (e.g., the extent to which emphases on particular components of rights vary consistently and meaningfully across Global South countries that may share a history of colonization, but differ in other important ways). The finding that the nature of rights more often took the form of individual freedoms and social duties than individual duties to society or the government suggests that future research as well as interventions aimed at peacekeeping, and supporting human rights around the globe should focus more on universal human values and ethics and less on policy and governmental action, regulation, and law. Countries engaging in interventions to support human rights and freedom need to be aware of differences in perception from region to region in order to avoid alienating those they seek to help. Research such as this is an important first step in raising awareness of the importance of these perceptions.

---

[1]Analyses for Ghana were done only on the sample that completed the English version of the survey because the Ewe surveys have not yet been translated.

Finding Harmony with Indirect Directivity: Cognitive-Behavioral and Psychoanalytic Approaches to Counseling in China

Danielle Archie
University of Central Arkansas

University of Central Arkansas
dxie@uca.edu

Over the past decade, counseling psychology has pushed for an international perspective (Forrest, 2011; Heppner, 2006; Leung, 2003; Leong & Bluestein, 2000; Leung, Guo, & Lam, 2000; Nutt, 2007). At the 2008 International Counseling Psychology Conference, over one-third of the conference was focused on international programming and landmarked an internationally themed conference. Leung (2003) noted that cultural encapsulation of the profession may give a *false sense of self-sufficiency* and lead to an avoidance of looking outward for ideas. Leong and Bluestein (2000) asserted that in order to achieve and sustain a truly multicultural perspective, we must avoid seeing Western scholarship as the ideal or *truth* to be imparted to the rest of the world; instead we need to move beyond a national multicultural perspective toward a global vision for the field. Western scholarship can contribute to the growing need for culturally appropriate training and treatment in other countries and yet benefit from research beyond its borders (Leung et al., 2000). Counseling exists in a cultural context, and in order to understand both the culture-general and culture-specific aspects of counseling, we need to take a global and comparative approach to counseling (Leong & Bluestein, 2008).

Heppner (2006) stressed the importance of incorporating the international perspective in training of counseling psychologists, arguing for action ensuring that training and research occur in a richly diverse cultural environment, such as immersion experiences, collaboration with colleagues from other countries, student/faculty exchanges with other countries, and incorporating international readings into training curriculum. These activities promote specific cultural issues both intellectually and experientially. Further, as the economic expansion of China continues, the associated growth will result in an increased demand for mental health and other professionals. In the absence of established standards for theoretical approaches to counseling in China, this article is expected to be particularly useful for those early career professionals intending to work and network with Chinese clients. This article reflects the multicultural training of two early career counseling psychologists in collaboration with a Chinese tenured faculty member working at an American university. It incorporates both our reflection on our own experiences in China and a literature review of counseling in China. It is our hope that, through the unique combination of our experience and literature review, we will be able to convey the importance of intellectual and experiential multicultural training.

Mental Health in China

As China continues to rapidly expand its international and economic ties, the need for mental health services is also increasing. A recent article on CNN.com describes the adverse effects of the economic boom on mental illness (FlorCruz, 2011). In the aftermath of several tragic homicidal attacks on the public by Chinese citizens with mental illness, FlorCruz (2011) interviewed Chinese counselors to demonstrate the need for appropriate mental health prevention and intervention services in China. Although China's population accounts for one-fifth of the world's population, there is a staggering lack of counselors available to offer culturally appropriate mental health treatment (about 215 psychiatric patients to every one mental health professional according to the Ministry of Health's Center for Statistics Information, as cited by FlorCruz, 2011). The alarmingly high suicide rate in China is another critical reason to improve culturally appropriate mental health intervention (Miller, 2006).

To address the growing need for mental health services, the Chinese government had called for an increased focus on psychological treatment to promote health harmony (Schlosser, 2009). Although transplanting pre-established methods of counseling from the West into China may appear to be a quick and easy fix, doing this without modifications based on cultural considerations may do the field a disservice. Despite the general consensus that the globalization process has brought some individualistic values to the east (Kwan, 2009; Schlosser, 2009), Duan and Wang (2000) noted the importance of knowledge and understanding of both the traditional and transforming collectivistic culture in providing culturally appropriate counseling for Chinese clients.

Cognitive-Behavioral Therapy in China

Many authors have suggested that cognitive-

behavioral therapy (CBT) is especially suited for work with Chinese clients (Chen & Davenport, 2005; Hwang, Wood, Lin, & Cheung, 2006; Lin, 2002; Williams, Foo, & Haarhoff, 2006). Lin (2002) pointed out that Chinese individuals function well in structured, clearly defined roles within authoritarian, hierarchical relationships. Chinese clients respect authority and expertise in therapists and are likely to perceive them as more competent when they take a directive, advising, and problem-solving approach. Practical solutions may be preferred over discussing intense emotions because these solutions are a way of engaging clients by giving a "gift" of symptom reduction, consistent with the gift-giving culture (Hwang et al., 2006). Based on our discussions with many counselors and psychologists in China, CBT training was indeed highly desired and sought after.

However, the traditional CBT model may require several modifications to fully fit Chinese cultural values (Chen & Davenport, 2005). Although respect for experts may lead the Chinese to initially seek a directive therapist, this teaching role may create hesitance to express disagreement and lead to early termination. The use of Socratic questioning to challenge dysfunctional thinking may cause anxiety for clients to deliver a "correct" answer, and assertiveness training may violate values of harmony, deference to authority, and avoiding confrontation.

Psychoanalysis in China

Like CBT, the emphasis of the therapist as expert in psychoanalysis fits well with the Chinese emphasis on the student-teacher relationship (Halberstadt-Freud, 1991; Schlosser, 2009). Additionally, both *Zen* Buddhism and psychoanalysis can be viewed as effortful studies in attention, making psychoanalysis a natural fit in Buddhist influenced China. Concepts such as unconscious activity, defense mechanisms, and the superego seem to be well-received among Chinese psychiatrists (Joseph, 1986).

However, psychoanalysis has been criticized for being overly Eurocentric and insensitive to the role of family and community (Prochaska & Norcross, 2007). Expressive sharing of free association may be a mismatch for the cultural de-emphasis on excessive emotionality. Moreover, the psychoanalytic distinction between the pain of psychological conflict and physical pains was not seen as a good fit for the Chinese holistic perception of mind and body (Halberstadt-Freud, 1991).

Previously Overlooked Cultural Considerations

Collectivism. It is well-established that the Chinese may represent the prototypical example of collectivism, in which the group takes precedence over the individual (Triandis, 2001). Collectivistic cultures also emphasize relationships above tasks and achievement. Through cooperation, conformity, obedience, and avoiding conflict, relationships become stable and long-lasting. As such, the absence of interpersonal harmony may be the locus of distress for Chinese clients (Hsiao, Klimidis, Minas, & Tan, 2006). Core Chinese values, rooted in Confucianism, include filial piety, compliance with authority, conservatism and endurance, fatalism, and male dominance (Kwan, 2009). This manifests as structured vertical relationships and strictly obeyed norms (Triandis, 2001). Other values include the limited expression of emotion (Shibusawa & Chung, 2009), *renqing* (an interpersonal relationship defined in doing and returning favors), saving face, non-verbal communication (Hsiao et al., 2006), indirect verbal communication, and a holistic view of the mind and body (Sue & Sue, 2008).

Even the traditional manner of eating represents a collectivistic orientation. During our visit to mental health facilities in China, our gracious hosts treated us to several traditional meals, which were served on a large, rotating turntable in the center of a round table that was spun to bring the desired dish close enough to reach chopsticks into the dish and take enough for one or two bites. This tradition of food service is very communal, with every person sharing equally. The message is "what's mine is yours." Western individualists might shudder at this method of delivering food, since every person returns their chopsticks into the community dishes over and over. The collectivist, however, values these shared experiences.

The sense of connectedness appears related to the cultural values of personal space and privacy (Lomranz, 1976). We noticed that privacy appeared to be much less important in China than in the West. It was not uncommon for clients in psychiatric hospitals to be asked about their diagnosis and treatment. As beginning Western psychologists, this exchange was surprising because the clients did not seem to have any qualms about openly discussing their mental health with apparent strangers. While Chinese neighbors often live very close and share communal gardens or courtyards, Westerners tend to have privacy fences around their yards. We also witnessed several other examples of the de-emphasis on privacy and personal space. For instance, mothers showed no discomfort in carrying their nude infants in public. Chinese tourists were not hesitant in taking a foreign tourist by the hand for a photograph. Finally, most young adults shared a physical closeness with each other that is reserved for only very close relationships in the West.

Approaches such as CBT and psychoanalysis focus on the individual rather than the system. Early career psychologists wishing to apply theoretical approaches in China should choose or modify the approach to fit with a systemic understanding. Furthermore, psychological health should be defined in terms of the collectivistic culture. Factors such as apparent low-self esteem, submissiveness, conformity/compliance to authority, male dominance, and filial piety should be viewed as culturally appropriate rather than signs of pathology. Finally, homework should be assigned with caution that it may interfere with the client's in-group system. Optimal homework assignments are those that facilitate interpersonal harmony.

Face and modesty. One concept that has been largely overlooked in discussions of particular therapy models with Chinese clients is the importance of Face. Face is a social-psychological concept that is universal to all cultures, but holds great significance in Chinese culture (Yabuuchi, 2004). In Western culture it is most often related to "saving face"

and is largely an unconscious phenomenon. However, in Chinese culture, Face goes beyond "saving" and is something that can be given, projected, promoted, struggled for, lost, borrowed and underlies all social interactions. Another importance distinction in Face between cultures is where it exists. In the American culture, Face, is possessed and taken with one into various situations. In the Chinese culture, Face is dynamic and must be built and maintained within each relationship. Maintaining Face is of utmost importance for regulating social interactions within Chinese culture and helps to build *guanxi* (social network and connections), which *renqing (*emotions and social resources) flow through. Loss of Face leads to shame and can harm a person's *guanxi*.

During our stay in China, we witnessed many examples of how Face influenced social interactions. While many Westerners may carry their reputation with them into a meeting with new colleagues and rely on it to speak for them, a Chinese person will attempt to promote their Face with the new contact in order to build *guanxi* with them, regardless of what their reputation is with others. This was apparent in our visits to universities, hospitals, and counseling centers. Nearly everywhere we went, our hosts immediately extended hospitality to promote their Face and build a positive *guanxi* with us. This hospitality often took the form of being served tea or meals, depending on the time of day, and always being served first. Our hosts would also extend hospitality by giving gifts and offering the prime seats to us. We were surprised at the treatment we received from important researchers and practitioners, being merely students from a small university. However, we soon realized that regardless of the Face each party possessed before meeting, our hosts felt the need to build Face in order to begin a relationship with us.

Not only is it important to promote and protect your own Face, the Chinese are also concerned with the Face of others. A number of young Chinese women we met discussed struggles maintaining an "appropriate" appearance of being thin and feminine as their appearance was a reflection of their parents and significant others. Therefore, this pressure was directed at protecting the Face of important people in their life. We also witnessed people protecting the Face of strangers and acquaintances, not just loved ones. The most vivid example happened while visiting a university of Traditional Chinese Medicine (TCM). A member of our group stated, in the presence of the TCM students, that she did not trust TCM to work. Following this remark, the Chinese woman in our group defended TCM, describing how she trusts her health to TCM and regularly takes TCM herbs. For several minutes she excessively praised TCM and discussed the problems with Western medicine. Later on the ride back, she explained that she felt embarrassed for the TCM students and exaggerated her reliance on TCM in order to protect their Face.

CBT may offer initial problem solving and symptom relief, but some aspects of CBT may not fit with norms of Face. Because it consists of social interactions, the therapeutic relationship with Chinese clients may be largely influenced by Face. Chinese clients might be concerned with protecting their own Face, as well as that of the therapist, in order to build *guanxi*. To protect Face, a client might be hesitant to express emotions or discuss psychological distress. A client concerned with protecting the therapist's Face may also find it difficult to disagree with the therapist.

Chinese individuals value modesty and may feel uncomfortable directly discussing their own positive behaviors. This has potential application in CBT if a beginning therapist expects clients to disclose the behavioral improvements they have made since the last session. CBT focuses on out of session homework and positive reinforcement for improvements made by clients. Driven to protect their Face and display modesty, the direct communication style of CBT may be problematic in work with Chinese clients.

Traditional authoritarian techniques of psychoanalysis also may violate the principle of Face. An authoritarian relationship that focuses on transference can violate the reciprocity that is desired in relationships to maintain Face. Also, a focus on sexual drives may be seen as damaging to the client's Face. Although both CBT and psychoanalysis offer some benefits for the Chinese client, many aspects may violate cultural norms. Therefore, early career counselors should not restrict themselves to these approaches and should be open to using the indirect methods of communication discussed in the next section to help clients maintain their Face.

Indirect communication style. Indirect communication is the chief communication tool in collectivistic cultures. In the West, "reading between the lines" is rarely required, but is "normative and intentional" in collectivism cultures (Fong & Phillipsen, 2000). Peeling back the layers of nonverbal and indirect communication to reveal the hidden meaning of a message is like ceremoniously unwrapping a gift (Shibusawa & Chung, 2009).

During our brief yet enlightening time in China, we quickly learned to recognize some of the non-verbal forms of this indirect communication. Personal space was one of the first values we recognized as different from the West. After some time, we began to recognize that the physical closeness may have been a way of communicating welcoming affection or curiosity in the absence of verbal speech. Once, while riding in a taxi, one of us noticed an unexpected feeling of unease. After a moment of introspection, it became evident that the discomfort was due to the surprising physical closeness between she and the Chinese guide despite the relative plethora of space in the backseat of the taxi. Interpreting this closeness as a means of communicating trust and affection, the feeling of unease dissipated and a new understanding of the evolving relationship was established.

Apparently the personal space that we witnessed among young people not only represents feelings of affection, but also an understanding of the type of relationship between individuals. While the affection between friends is apparent by the small amount of interpersonal space, the affection between hierarchical relationships (e.g., parents and children) cannot be judged the same way. In other words, horizontal relationships may minimize personal space to indirectly communicate positive feelings. Meanwhile, vertical relationships

(e.g., parent-child, employer-employee, older brother-younger brother) maintain a fair amount of personal space and communicate emotional responses in an entirely different nonverbal way. In counseling, the amount of physical space allotted by the client may give beginning counselors a clue to the clients' perception of the relationship.

In their deconstruction of the popular film Dim Sum, which depicts a Chinese American girl's relationship with her aging mother, Fong and Philipsen (2000) outlined several types of persuasive indirect communication. The first attempt at persuading the other person requires the individual to communicate their desires using one of four tactics. These tactics include discussing their wishes for the target to a 3rd party while in earshot of the target, asking indirect questions aimed at guiding the conversation without clearly asking for information, making comparisons of the target to someone else (perhaps a sibling or neighbor) who possesses the desired trait, or to make implied statements requiring some action commitment from the target.

A second approach to indirect communication described by Fong and Philipsen (2000) is the use of an intermediary or "go-between" who communicates the wishes of the individual to the targeted other. The third dimension of indirect communication refers to unspoken action, which encompasses not only nonverbal communication such as eye-contact, facial expressions, and body language, but also symbolic action. In the film Dim Sum, the mother, who wants her daughter to marry before her death, uses the unspoken action strategy to communicate this by hanging the daughter's wedding dress up next to the mother's intended funeral dress. The fourth and final dimension of communication is direct communication (e.g., "I'd like you to marry before I die") and is typically a last resort because it risks the development of conflict, which is in contrast to interpersonal harmony.

Because Chinese clients expect to preserve Face and social harmony, counselors should not demand direct communication. Overt expression of emotion is an undesirable behavior in collectivistic cultures, therefore directly discussing distressing emotions in counseling has the potential to impede therapeutic progress. Instead, beginning counselors should expect to validate clients' experiences without explicitly discussing them (Shibusawa & Chung, 2009). Chinese clients expect to share *guanxi* with their counselors, reciprocally extending Face to each other. This means that the counselor will be expected to understand the client and show empathy to their experiences by not demanding a direct discussion of the burdens of the situation.

The open nature of communication in directive approaches such as CBT may be perceived as abrasive to a Chinese client. Therefore, counselor should consider communicating with their Chinese clients in indirect ways. Direct questioning should be a last resort and information should be obtained using other approaches as much as possible. For instance, early career professionals might use one of the indirect linguistic strategies offered by Fong and Phillpsen (2000) such as the use of a 3rd party proxy, making comparisons, or using implied statements.

In traditional psychoanalysis, the psychoanalyst usually has some recommendations in mind for relief of patient neurosis, but they typically avoid openly sharing this prescription so that the client can come to their own solution. A modification of this might require the analyst to remain open about their interpretations and recommendations while sharing them in an indirect way. This meets two of the Chinese client's cultural needs: direct advice from the expert and indirect communication.

Process issues such as failure to progress in therapy may not be openly addressed as it would be with Western clients. Concern should be addressed with an indirect linguistic strategy or with the use of an intermediary. The use of intermediaries offers the opportunity to involve the client's social system and protect the client's Face. In addition, client gratitude and affection will be uniquely expressed. This may involve nonverbal action, gift-giving, or indirect speech. Early career psychologists should expect to look for these expressions and respond reciprocally to maintain and deepen therapeutic relationships.

Finally, couples and family therapy will be very important with Chinese clients. When conducting such therapies, modifications of Western approaches will likely be most beneficial. For instance, rather than asking clients to directly express their concerns to each other, it may be more appropriate for beginning therapists to take the role of 3rd party intermediary. In this manner, clients can express their concern to the therapist who may offer a gentle interpretation to the other party.

Conclusions

Since the opening of China to the West, psychotherapy has made some impressive advancements in an underserved and barely understood area. Scholars have done well to consider pre-existing therapeutic approaches and aspects of those orientations that fit with the Chinese culture. Elements of CBT and Psychoanalysis have been used with varying degrees of popularity. However, the growth process is still in its infancy and counseling psychology is in a prime position to advance the mental health services in the country. For instance, due to the importance of Face, outcome research based on the Western measures that focus on client's direct report will be difficult to obtain as a means of validating the success of any therapeutic approach. Culturally sensitive outcome measures should be developed to aid clinicians in measuring the effectiveness and acceptability of their interventions.

In addition, therapeutic approaches other than CBT and Psychoanalysis may have vital contributions to offer. Values such as Face, indirect communication, and modesty should be thoroughly explored in consonance with values imbedded in other therapeutic approaches such as self-enhancement in person-centered-therapy, direct in touch with personal experience of emotions in acceptance and commitment therapy. Furthermore, an emphasis on training in basic common factors micro-skills may also facilitate social skills such as attention to non-verbal and indirect communication. Culturally sensitive therapeutic approaches should be

explored both conceptually and quantitatively in Chinese counseling settings.

The results of our review indicate that the East and West have much to learn from each other regarding the ways in which people experience and respond to treatment for psychological distress. In China, the influence of collectivistic values and focus on harmony runs deep. The current psychoanalysis and CBT models offer the directivity and authoritarian relationship desired by Chinese clients. However, they do not adequately protect a client's Face or use the indirect communication style that is common in China. Therefore, counseling psychologists will need to learn to work within rather than against this worldview by helping the Chinese client find harmony through indirect directivity.

The Importance of International Immersion Experiences in Developing Cultural Competence

Sarah Barton, M.A.
Miami University
bartonsn@miamioh.edu

In my experience, if you ask any psychologist or mental health professional whether they think that cultural competence is important, they will most likely say yes. But what does it mean to be culturally competent and why do we need it? Whether or not we like it, the world is becoming smaller every day through the process of globalization. More and more, individuals from different cultural backgrounds are beginning to come in contact with one another and are forced to navigate increasingly complicated relationships. Both within and outside of the United States, mental health professionals are more frequently interacting with clients who are from a different cultural background than them, however racial/ethnic disparities in quality of health care continue to be an issue (Betancourt, Green, Carrillo, & Ananeh-Firempong II, 2003). Specifically, one particular challenge related to this disparity involves providing *quality care* that incorporates both best practices and an understanding of specific client characteristics in order to provide effective and relevant interventions.

In response to the increasing demand of being able to work with diverse client populations, the American Psychological Association (APA) and the Council for Accreditation for Counseling and Related Educational Programs (CACREP) have made a large push to provide a cultural basis for the application of research and clinical work, and in turn mandated multicultural training as part of graduate study within accredited training programs (APA, 2003; Speight, Thomas, Kennel, & Anderson, 1995; Sue, Arredondo, & McDavis, 1992). In order to assist programs with developing multicultural training, both governing bodies have provided similar frameworks that include three general areas including cultural awareness and beliefs, cultural knowledge, and cultural skills (Sue, 2006). Although all accredited programs have mandated multicultural training, there has been difficulty in translating theory into clinical skills, training, and practice, which has resulted in inconsistencies across training in different programs (Sue, 2006). Training programs range from mandating only one multicultural course to having several mandated courses with multicultural issues woven throughout every other course offered. Differences in training produce psychologists with a wide range in skill and understanding of multicultural issues, leading to continued disparities in providing ethical and effective treatments to diverse populations (Smith, Constantine, Dunn, Dinehart, & Montoya, 2006).

So, how do we know if the training we are receiving is adequate to conduct ethical treatment of diverse populations? Multiculturalism is a social-intellectual movement that not only demands that all groups be treated with equal respect, but also places value on diversity, tolerance, human rights, and authenticity (Fowers & Richardson, 1996). Cultural competence, which stemmed from the adoption of multiculturalism within the mental health field, may therefore be defined as the ability to engage in actions or create conditions that maximize the optimal development of the client and client systems. Multicultural counseling competence is thus achieved by the counselor's acquisition of awareness, knowledge, and skills needed to function effectively in a pluralistic democratic society (e.g., ability to communicate, interact, negotiate, and intervene on behalf of clients from diverse backgrounds) and on an organizational/societal level, advocating effectively to develop new theories, practices, policies, and organizational structures that are more responsive to all groups (Sue & Torino, 2005).

In line with this understanding, several studies have attempted to evaluate important characteristics of individuals who are viewed as culturally competent, as well as the effectiveness of various training experiences. Key characteristics of individuals who presented as culturally competent included the ability to acknowledge, accept, and value the cultural differences of others. More specifically, individuals were able to develop the skills and knowledge that allowed them to appreciate, value, and celebrate both similarities and

differences within, between, and among culturally diverse groups (Bhui, Warfa, Edonya, McKenzie, & Bhugra, 2007). Training models developed to address the development of these characteristics include a wide variety of approaches including lectures, case study discussions, role plays, video materials and video feedback, and study abroad / immersion experiences (Bhui et al., 2007; Kitsantas, 2004). Overall, research has supported that various methods of cultural competence training improve cultural competence and have resulted in increases in treatment provider knowledge, attitude, and skills (Beach et al., 2004; Cooper et al., 2004; Smith et al., 2006). Although choice in training experiences is greatly impacted by specific factors such as specific sociohistorical experiences including colonial rule and immigration, national attitudes towards migrants, citizenship, and how best to address racial and cultural integration (Bhui et al., 2007), immersion experiences or direct exposure to individuals from other cultures provide some of the largest benefits and improvement in key cultural competence characteristics in all three areas (i.e., awareness, knowledge, and skills; Beach et al., 2005; Kitsantas, 2004).

In particular, immersion experiences, such as study abroad programs, have been shown to enhance students' cross-cultural skills, global understanding, as well as self-awareness and knowledge of a particular group (Kitsantas, 2004), all of which are important in developing cultural competence. My own experiences as a graduate student, who has engaged in international immersion experiences while in graduate training, are consistent with the conclusions of Kitsantas (2004). This past summer I was given the opportunity to attend a three week study abroad experience in Japan that was tailored towards my research interests: violence against women. Although I expected to gain a deeper understanding of what Japanese women in urban areas face when exposed to violence, I could not have predicted the immersion experiences that would change the way that I view psychopathology and cultural competence as a whole.

During the trip, I experienced for the first time what it felt like to be an "outsider" in the community I resided. As the ethnic make-up of Japan is 98% Japanese, it was clear from the very beginning that I was an anomaly and was thus treated as an outsider (also known as Gaijin). People would often stare, take pictures, and whisper around me. Although the Japanese culture as a whole was very welcoming, these experiences made me feel unwelcome and created a sense that I did not belong. After the first few days, I was desperate for anyone who could speak my own language or understand the experiences that I was having. I felt alone, misunderstood, and lost, and felt a constant yearning to be around others similar to myself. Upon reflecting on these experiences, I began to think about how marginalized groups within the U.S. are treated differently due to norms and values that deviate from the dominant culture. This further solidified my perspective that we must understand cultural differences from a strengths versus deficiency perspective, in order to understand, validate, and effectively treat individuals from marginalized groups.

In addition to my experiences as an outsider, I also found that most of the theories and research related to violence against women generated in North America were not applicable within the Japanese culture. After meeting with several agencies and non-government organizations, I quickly realized that our understanding of women's experiences are heavily influenced by our own sociohistorical experiences, current laws, and cultural norms and practices. For instance, due to stricter laws in Japan related to physically harming a woman, most perpetrators of domestic violence within the Japanese culture revert to other forms of harm that cannot be as readily physically identified such as control of finances, severe emotional abuse, and forms of sexual violence that could be construed as consensual within a relationship. Although there are laws within the U.S. against physically harming women, a violation for breaking the law in Japan, especially related to violence against women, not only heavily impacts the individual, but also destroys the reputation of the family and has wide-reaching consequences for all members of the family including negatively impacting the ability to find a job and rent/own a home. In addition to differences in laws, social norms and practices, which ascribe gender roles within Japanese society, which are largely different from the dominant culture within Western societies, also contribute to understandings of violent experiences women have and motivations for perpetrators to engage in violent behaviors. As dominant theories related to violence against women in psychology are based on the sociohistorical experiences, cultural norms and values, and laws that exist within the U.S. and Europe, these theories and conceptualization become largely unhelpful when attempting to understand experiences that women have within Japanese culture. Although I have studied and read research pertaining to the importance of understanding these factors, it was not until this experience that I fully grasped the critical importance of developing an understanding and awareness of these systems when working with specific groups within diverse populations.

Since my return, the way that I view psychopathology and cultural competence as a whole has shifted, and in turn it has impacted my research and clinical work. More specifically, I have developed a deeper understanding of how the many systems and sociohistorical experiences impact individuals and the experiences that they have. I now view the Western understanding of psychopathology as relevant and important for *specific* groups in *certain* contexts (i.e., European American, middle-class individuals, who ascribe to the dominant norms and practices). As such, I have come to the understanding that because social constructions of psychopathology are imbedded within a cultural context, we cannot fully understand experiences that individuals have without first considering their sociohistorical context and the many systems within which they reside. Although cultures have *some* similarities, we cannot assume that psychological constructs, or "universal" constellations of symptoms, represent similar phenomena in different regions and populations around the world.

Considering the impact that this immersion

experience has had on my graduate training, I would highly recommend that both Clinical and Counseling psychology training programs invest in more experiential exercises and opportunities with diverse populations in order to strengthen students' awareness of the impact of culture, as well as the importance of developing cultural competence. Although not every program could afford to fund an international experience, such as the one I engaged in, programs could develop activities that integrate diverse populations from the local community in order to better understand experiences of individuals who do not hold similar beliefs or values to the dominant culture. Additionally, graduate training programs could integrate activities that involve interacting with international students or other immigrant groups on campus. These activities or exercises could be utilized to help training clinicians develop important skills such as learning new customs, cultural values and norms, and what it means to be culturally competent with particular populations. Lastly, I would highly encourage training programs to build relationships and develop training opportunities, whether on a domestic or international level, with diverse communities. These training opportunities could serve as immersion experiences in themselves to help further develop insight and awareness of the heterogeneous nature of diverse populations, as well as critical transferrable skills that could be utilized when working with future diverse populations.

Checking On-line Psychology Graduate Degrees: Five Points to Consider

Jolene R. Caro
Chicago School of Professional Psychology
Jolene.Caro@gmail.com

"How can an international of U.S. student select a high-quality on-line psychology program to complete their master's degree?" This is a common but challenging question for an increasing number of students, who can easily find themselves scouring the internet for many hours to find information on available degrees programs.

When I was near the completion of my Bachelors, it was natural for me, like many others, to start looking into graduate-level programs. I was moving from Germany back to the United States where my work schedule would vary, so I needed an online program. I spent countless hours researching schools and programs and there are five things I learned throughout my search.

1. Use your goals to determine the right school and program. What do you want to do with your degree? There are a number of different masters and doctoral degrees and it is important that you understand where you want to go with your education and career. Do you want to be a licensed counselor or therapist? Do you want to enter the world of School or Clinical psychology? What about Forensics, Behavioral therapy, or Industrial Organizational Psychology? Maybe you are pursing a Masters program in hopes of making yourself a better candidate for a PhD or PsyD program? The first step in finding an online psychology program is to determine whether you need a PhD or a Masters to reach your goals. Psychology has many sub-fields knowing what sub-field you want to move into will help you determine what school and program will work best. A good online source for some basic information on Masters and Doctorates in Psychology can be found here: http://www.alleydog.com/psychology-degrees.php

2. Not all schools are equal. Once you decide between a Masters and a Doctorate you need to find a school. If you take one thing away from this article, let it be this. You will find a lot of schools offer online programs in today's technology driven age. The easiest to find using a basic search will be for-profit schools. Be careful when choosing a for-profit institution, as there has been an issue with some for-profit institutions parent companies losing financial aid funding. This has caused mass closures of campuses. There is nothing worse than getting into a program and taking out massive student loan debt to have your school close down mid way through a degree. Some students also found out that their classes did not transfer over to any other programs. Students using VA benefits found out that their benefits were completely lost and they no longer had enough left over to complete a degree. More on this situation can be found here: http://www.npr.org/blogs/ed/2014/07/16/331700270/students-react-to-the-closure-of-a-giant-for-profit-college

This is not to say that all for-profit institutions are bad; in fact, I have heard great things about some, but that you really need to do your research on a potential institution. Take the time to understand the difference between for-profit and not-for-profit schools (www.franklin.edu/blog/non-profit-vs-for-profit-colleges-what-you-need-to-know/), as well as public and private schools (www.collegeconfidential.com/dean/000294/). Understanding these differences can help you choose the right school for your needs.

3. A program may not be what you think. This is through no fault of the institution, but is a problem still. The best example I can provide is Forensic Psychology. My Masters is in Forensic Psychology and I am constantly asked if I want to be a criminal profiler. The chance of becoming a criminal profiler as a forensic psychologist is extremely slim. This is a common misconception due to current TV shows such as *Criminal Minds*. Finding out mid-way through a program that you wont be chasing serial killers can be quite upsetting and leave you having to decide between finishing a degree you do not want, and withdrawing with no degree and large student debt. Do your homework and be sure that the sub-field is what you think it is before racking up those student loans.

4. Just because a program is available, does not mean it is useful. Some schools have created programs that will bring in money, but are essentially useless. If you come across an uncommon program it could very well be a new and emerging field that can be useful, but it could also be useless. This is not always the easiest information to find, but if you decide the degree falls into the "new and emerging" field rather than useless; decide if you are willing to do the work that is necessary to make others see the usefulness of your degree. These fields are harder, but not impossible, to break into.

5. Know your state requirements if you plan to get licensure. Each state has different requirements and it is important to know if your program will set you up for licensure. Many programs claim to prepare a graduate for licensure, but no program covers all 50 states requirements, at least not that I have found. More than one state requires an APA accredited Clinical Psychology program in order to apply for licensure at the doctoral level. If you want a PhD or PsyD in clinical psychology an APA accreditation is necessary in some states and for some jobs.

I had decided early on not mention any particular school while writing this article, but I am going to make one exception based on lesson number 5. If you want to pursue a PhD in Clinical Psychology online there is only one school that is APA accredited: Fielding Graduate University. Fielding may or may not work for you, but that is for you to decide. Also, it is not fully online. There are monthly meet ups as well as yearly conference attendance requirements. This can be costly, but well worth it if you cannot attend a traditional brick and mortar institution.

Once you have decided on the right degree and program, you can begin researching schools. Many traditionally brick and mortar schools offer online programs that do not show up in a basic web search. Try going to a potential schools website and searching from there. Finally, be persistent in your search for the right school. There are many schools out there that did not come up in my searches but were found in discussion boards; which can be used to gain information guidance from other people who have already done the research. I hope this article helps proves useful in your search for online graduate degrees, but essentially, you will need to do some homework.

Note: Jolene Caro is a PhD Student of International Psychology at The Chicago School of Professional Psychology in Washington DC, and is the President of its Psychology Without Borders student club.

Learning by Doing: Transnational Social Justice Consultation in Kyrgyzstan

Melanie Cadet
University of Massachusetts Boston
melanie.cadet001@umb.edu

Aleksandra Plocha,
University of Massachusetts Boston
aleksandra.plocha001@umb.edu

Emily E. Wheeler
University of Massachusetts Boston
emily.wheeler001@umb.edu

This past May, eight second-year doctoral students and four faculty members in the Counseling and School Psychology Ph.D. program at the University of Massachusetts Boston (UMass) embarked on the program's first transnational social justice trip. The group traveled to Kyrgyzstan, where they worked with the American University of Central Asia (AUCA) in Bishkek. They gave presentations and workshops to students related to resume building, cover-letter writing, work-life balance, and applying to graduate school. They also implemented individual and group interventions to help students with career decision-making. In addition, they met with faculty in the Psychology Department at AUCA to discuss their plans for establishing an Assessment and Consultation Center to meet community needs for testing for autism, learning disorders, and other issues. In the following paragraphs, three students will share their personal impressions of the trip.

Melanie Cadet:

Our 10 day trip to Kyrgyzstan was an eye opening experience for me on personal, educational, and professional levels. As counseling psychologists in training who are keen on social justice work, I believe that our job is not to swoop in like knights in shining armor to provide a service or quick fix/band-aid solution. This trip has helped me understand that there is a difference between working *for* a population and working *with* a population (Biddle, 2014; Corey, Corey, & Callanan, 2011). Our role, rather, is to collaborate with the group/population in question to identify the needs that exist, how to address thier needs, and to provide assistance in implementing changes that allow that group to continue addressing that need without further assistance.

For instance, we met with the faculty of the Psychology Department at AUCA and in a collaborative endeavor, both groups tried to discern how we could be most helpful regarding their assessment needs. Instead of imposing our way of doing things, we had a wonderful discussion during which both groups put forth and considered different potential options. In this collaboration, the AUCA faculty members were the experts who made the final decision about which option would be feasible or ideal within the Kyrgyz context. In addition, we implemented career adaptability training for interested AUCA students, which resulted in a wonderful collaborative discussion with the students. After the training, we worked together with the students to identify which aspects of the training were helpful, unhelpful, and/or could be improved for future practice with students in Kyrgyzstan and elsewhere. For instance, students suggested that an increased emphasis on the influence of family history may be particularly valuable in future vocational trainings with Kyrgyz students. I learned from the students that socio-cultural factors, such as, the family, play a very important role in in influencing the career path of Kyrgyz students. Based on anecdotal evidence, it appears that family variables have a different role in the vocational lives of Kyrgyz students as compared to U.S. American students.

Overall, traveling to Kyrgyzstan and working with AUCA provided me with an example of how to walk the walk of social justice. It is not enough to assume that a need exists or to presume that we have the knowledge to know exactly what their need is. As a future counseling psychologist, I have a responsibility not to "give a voice" or speak on behalf of a group/population/community, but rather to be collaborative and offer assistance in any way that a group considers appropriate or useful. My responsibility is not to impose best practices but to provide collaborative assistance and advocacy to empower communities to address their needs independently. On an individual counseling level, I feel an even greater responsibility towards tailoring counseling interventions in ways that are relevant and useful for my clients. My goal is to make efforts to be more collaborative with clients in the future and to seek assistance and supervision on how to do that in the most culturally-appropriate manner.

Emily E. Wheeler:

It is my belief that social justice work begins and ends with individual relationships while operating on many levels. One of the most powerful components of this trip/experience was in reflecting on how I could relate to the individuals I met and collaborated with while in Kyrgyzstan. In their chapter on international consultation from a multicultural-feminist framework, Mathews and Horne (2005) contend that a position of not-knowing with regards to other cultures is important for consultants who are working across borders in order to collaborate in an open and unbiased manner. In doing so, Mathews and Horne (2005) argue against using a framework of cultural competence, as we do in the United States. Rather, they argue that a critical and non-defensive examination of power in these relationships, including the current and historical power held by Western countries, allows for a more appropriate starting place that will aid in building a collaborative working relationship.

In the process of self-reflection during this trip, I realized that my culturally-based assumptions were a near-constant filter that I had to work through and attempt to unlearn cultural assumptions. Although multiculturalism and social justice work have been given consistent emphasis in

our coursework and training at UMass, this was my first experience of moving from discussion to direct experience in an international context. In conversations with students and faculty at AUCA, the challenge of not-knowing became clear to me, as did the potential rewards of using not-knowing to achieve a productive working relationship with international colleagues. I was struck by the effort required in working towards a collaborative, not-knowing stance. This stance was essential not just in the moment but also across time, in periods of preparation and reflection, as well as in the context of ongoing relationships.

Although I valued the preliminary research I had completed before the trip about Kyrgyzstan and the field of counseling within it, I learned on this trip a new appreciation for the role of lived experiences in constructing an understanding of something new. The insight that derives from experience is invaluable, and this trip provided me with the extraordinary gift of the means to learn about international psychology and consultation through lived experiences and from the wonderful faculty and students whom I met at AUCA. These learning experiences have already changed the way I approach working relationships after my return to the U.S., and it has spurred in me the desire to think forward to the relationships I will build in the future.

Aleksandra Plocha:

The opportunity to be immersed in the Kyrgyz culture provided a context for social justice considerations in our field that I have never experienced before. Throughout my graduate training at UMass, I have read and discussed many aspects of social justice, including the stigma of seeking mental health care. During my trip in Kyrgyzstan, I was able to understand the context of this issue in more depth. There is a tremendous need for mental health services in Kyrgyzstan due to "the multidimensional consequences of interethnic tensions, violence, and mass panic [that] included not only political, economic, and health costs, but also mental health repercussions including increased rates of reported depression, anxiety, somatoform, and posttraumatic stress disorders" (Malchonova et al., in press, p. 4). Despite this need, many barriers exist to accessing mental health care in Kyrgyzstan.

The current state of mental health services in Kyrgyzstan reflects the complex history of the country, including the intersection of the traditional culture with modern developments in this arena (Molchanova et al., in press). The concept of counseling, as a separate entity, did not exist prior to 2009, and as such, the notion of psychotherapy is very new in Kyrgyzstan. There are an estimated 32 psychologists in the entire country, or one psychologist for approximately every 171,176 individuals. There are only three university departments that currently provide education for counselors, which means that opportunities for training new counseling professionals are extremely limited. Furthermore, the training models for counseling psychology and psychotherapy are not uniform and vary greatly (Molchanova et al., 2009).

Language and cultural background pose other barriers to accessing mental health care in Kyrgyzstan. The Kyrgyz language has limited vocabulary for emotional states and concepts like *depression* and *anxiety*, which makes communication about mental health concerns and diagnosis of mental health disorders challenging (Molchanova et al., 2009). This difficulty is compounded by the lack of professionals in Kyrgyzstan who speak both Russian and Kyrgyz. Furthermore, a majority of ethnically Kyrgyz people prefer to seek treatment from traditional healers.

Developing a better understanding of the contextual factors that have shaped and continue to influence the field of psychology in Kyrgyzstan, and the barriers to accessing mental health care, is important in framing solutions to these barriers which may be more complex than they might initially seem. I realized that when we limit our understanding of social justice to what we read in published works, from the confines of our classroom, we may misperceive systemic changes as being overly simplistic. Being immersed in a culture, however, elucidates the multidimensional attention that social justice initiatives require.

The trip to Kyrgyzstan with my doctoral program offered a once in a lifetime opportunity for personal and professional growth. It also represented a rare chance to apply my learning of social justice concepts outside of the classroom and to dynamically interact with counseling professionals in a culture very different from my own. It was a privilege to represent UMass Boston's Counseling and School Psychology Ph.D. program on its first transnational trip.

Conclusion

In sum, our cohort's trip to Kygyzstan and our collaborations with AUCA highlighted the importance of international travel and immersion in Counseling Psychology training, particularly from a social justice perspective. With this experience, we were able to supplement and give deeper meaning to our rich classroom discussions and readings about psychology and social justice in the context of internationalization of counseling psychology. This experience helped us become more aware of personal assumptions and biases in a unique and valuable way. We learned the importance of individual relationships, collaboration, and, perhaps most importantly, finding a shared lived experience and understanding of multiple worldviews. We returned from our trip to Kyrgyzstan feeling inspired, with a greater sense of meaning, purpose, and passion with regard to the field of counseling psychology.

International Graduate Student's Experience of the 2014 APA Convention

Reema Baniabbasi
Northeastern University

Dr. Ani Kalayjian
ATOP Meaningfulworld
Teachers College, Columbia University
DrKalayjian@Meaningfulworld.com

In many ways, this year's APA Convention in Washington, D.C. was different than the previous two that I had attended. As an international student from the United Arab Emirates who has been living in Boston, MA, for almost seven years, I was glad to find that the Convention hosted more events related to psychology in the Middle East. Furthermore, I had the opportunity to present in the convention for the first time in the form of an informal discussion. Similar to previous years, I attended the events related to international and cross-cultural psychology as well as psychology of religion and spirituality.

This year, I attended the International Mentoring & Orientation Committee (IMOC), which is part of the International Section of Division 17 (Counseling Psychology), Roundtable Discussion. At that event, I received valuable advice from psychologists, both clinicians and scholars, who used to be international students like myself during their training years in the United States. The most surreal part for me was to meet two of the discussion leaders, namely Dr. Stefania Aegisdottir and Dr. Ayse Ciftci, whose publications I had read and had felt inspired by their work. It was great to have the opportunity to meet them in person!

While many topics were discussed during this event, I especially learned from listening to the differing opinions about the value of taking time off to gain clinical or/and research experiences between a master's and doctoral degree. Whether this time off is spent in one′s home country, in the U.S., or both, all attendees agreed that doctoral programs will likely be interested in how this time was spent and how it advanced the development of the applicant. I heard caution against exclusively spending this time in clinical pursuits if one is interested in a research-oriented program and vice-versa. Another discussion that interested me was that of transitioning to professional life back in one′s home country after years of studying abroad in the United States. Discussion leaders highlighted how this process can be seen as one of rediscovery as a global citizen rather than that of merely "going back home." Among the proposed suggestions of performing this transition smoothly, the discussants suggested reading media about psychology in the native language, especially introductory books on psychology. Another proposed suggestion entailed conducting site visits of local community centers and practitioners to form connections and to map resources in one′s home country.

I further attended the board dinner and board meetings of Division 52 (International Psychology) and a business meeting of the International Section of Division 17. In fact, it was not until this year that I learned that students are allowed to attend some of the divisions′ board and business meetings. It was

Fellows Committee with President of the Division 52 (International Psychology) and me (right).

Student Column

During the Division 17 International Section Business Meeting, I asked attendees about an issue that concerns me as an international masters-level counseling psychology student who has one more year of graduate school and who hopes to obtain a Licensed Mental Health Counselor (LMHC) license in Massachusetts. I asked how does the section, and similar APA divisions, address the lack of agencies and organizations willing to sponsor international students for an H1-B work visa upon completion of their studies and Optional Practical Training (OPT). Without such sponsorship, recent graduates with F-1 student visa, like myself, are unable to gain needed post-graduate clinical hours for clinical licensure in the United States. For instance, one of the requirements of obtaining an LMHC license in Massachusetts is full time clinical work with supervision for a minimum of two years. In contrast, the OPT only allows international students on F-1 visa to work full time in the U.S. for one year upon graduation. This issue is especially difficult for F-1 visa students in the masters-level who do not have the privilege of doing something similar to a post-doctorate student who can extend their stay. Post-doctorate students have the option to apply for a J-1 research/scholar status, which is easier to get than an H1-B work visa.

Nonetheless, despite the hard work of the section, and similar APA Divisions, in this area, this challenge still exists. I was further surprised to learn that many U.S. universities do not properly caution their international students about working beyond the maximum hours of pre-graduation practicum/internship and part-time employment that are allowed to remain eligible to apply for OPT upon graduation. Fortunately, the attendees of the meeting gave me some helpful suggestions. They advised that I look for a mentor in Massachusetts, who would be willing to advocate for me, and that I pay attention to how much the agency or organization welcomes diversity. They also suggested that I make the most of my OPT period with my employers in the hopes that their positive appraisal and recommendation of my candidature will convince them to sponsor me. During the IMOC Roundtable Discussion, I learned that, unlike not-for-profit organizations, universities and some hospitals (not VA ones or those with low funds) are more likely to sponsor an H-1B visa. I further learned there that one could consider having a letter from the government of one′s home country or one′s university advocating to extend one′s stay in the U.S.

One of the Division 36 (Religion & Spirituality) Hospitality Suite events I attended was an informal discussion about the ethics of doing international research in the psychology of religion and spirituality. Participants of the discussion highlighted the need to genuinely learn the community′s interests first instead of coming in with an agenda. I was surprised to learn that even when doing international research, the Institutional Review Board (IRB) will still ask non-American co-researchers to go through the IRB research training. This makes me wonder about the cultural appropriateness of this practice and how to navigate cultural and ethical clashes in research. While my master′s program is clinically focused and I have yet to take the research classes this year, I wished that I had learned the contents of this discussion in a formalized way during my undergraduate research classes. Unfortunately, my undergraduate psychology program only briefly mentioned multicultural psychology topics in small sections of book chapters, not as a mindset to be practiced at all times as a researcher. Indeed, as a person who has been living in the U.S. for almost seven years and who was born and raised in the U.A.E., I have an interest in potentially exploring international research and this information would be highly valuable for me to gain..

This year′s convention was especially unique for me as it was the first one in which I did a presentation thanks to the immense help of my mentor, Dr. Ani Kalayjian. Dr. Kalayjian and I were among the panel presenters on *Ethnic Psychology Associations* in the Division 1 (General Psychology) Hospitality Suite. In this panel, each presenter briefly discussed the history and current status of an ethnic psychological association that they had led or were researching on. Apart from my presentation, I learned about the Asian American Psychological Association from Dr. Jeff Rey S. Mio, Italian American Psychological Society from Dr. Bernando Carducci, Greek American Behavioral Sciences Institute from Dr. Thomas Mallios, Armenian Behavior Sciences Association from Drs. Harold Takooshian and Ani Kalayjian, and Association for Trauma Outreach & Prevention (ATOP) Meaningful World from Dr. Kalayjian. This discussion has implications for assessing the growing role of U.S. ethnic psychology associations in U.S. psychology. In addition, by possessing the knowledge about active ethnic associations abroad, psychology associations in the U.S. can enhance international collaborations. Fostering these collaborations is important for the development of a global perspective in psychology and in being global citizens overall in our role as psychologists.

Division 1 Conversation Hour participants (from right to left): Drs. Harold Takooshian, Bernardo Carducci, Ani Kalayjian, Thomas Mallios, Ray Paloutzian, & me)

I presented an introductory review that I wrote and that was edited by Dr. Kalayjian The introductory review was about psychological associations in the Middle East. We hope to submit this for publication in the *International Bulletin*, a newsletter by Division 52, and to then work on a more comprehensive review for publication in an academic journal. We will then present updates in next year's *Ethnic Psychology Associations* panel in the next Convention where we will also be updated about other ethnic psychological associations from fellow panel presenters. We therefore hope that the information that we are gathering will be beneficial to both Divisions 1 and 52, especially in fostering cross-national collaborations. I had never imagined I would be presenting in the Convention and working on submitting to APA publications as a masters-level student!

Among the Convention events related to my region, I found myself feeling inspired in the first meeting of the Arab/ Middle Eastern American Psychology group which met in the Division 45 (Culture, Ethnicity, & Race) Hospitality Suite. Listening to a number of inspiring Arab psychologists who introduced themselves and their work in this meeting made me think about how much expertise already exists in my region even though there is a lack of avenues in which students can connect with them. Consequently, I liked the idea of a new group proposing to create a database of Arab psychologists and students, creating a listserv for members and listserv rules to moderate it, and to meet annually during APA Conventions. Meeting attendees also proposed the idea of dividing the group into smaller working groups.

As a student, it was interesting to gain an understanding of the variables that are considered when starting a group affiliated with APA. In particular, it was interesting to hear about the difficulties in assessing the number of APA members who identify as Arab or Middle Eastern. This difficulty arises because some members are hesitant about disclosing such information due to concerns about how APA will use this information. It is particularly a sensitive issue for Middle Eastern members whose identities are marginalized in the U.S. In the U.S. Census, Arabs and Middle Eastern people are automatically labeled as "white" even if they choose to indicate that their race is "other." Dr. Germine Award, the meeting leader, is trying to address this issue. Although the group currently aims to focus on Arab Americans, it plans to branch out to an international focus in the future. It also does not exclude people who are non-American or non-Arab/Middle Eastern.

Another event relating to my region was a symposium about Creating Peace in the Middle East. This event was chaired by Dr. Laura Miller and Dr. Wael Mohamed. The other speakers were Dr. Kalayjian, who led the discussion and Q&A in the end, and Dr. Shuki Cohen.

In this symposium, I liked hearing about the updates on Dr. Kalayjian's ATOP Meaningful World services in the Middle East this year. Her organization is not-for-profit and is affiliated with the United Nations. She has written two books that describe how her 7-Step Biopsychosocial and eco-spiritual model has been used in over 45 countries to help survivors of trauma due to natural and human-made disasters heal in a holistic way and to also prevent violence. Apart from connecting survivors with needed resources, Dr. Kalayjian's model incorporates meaning-making (based on Frankl's logotherapy), simple movement exercises (such as yoga and Tai Chi), breathing exercises, meditation, aromatherapy, and practices indigenous to the region being served. In addition, her model encourages survivors to heal their environment, both its ecological and social senses . It was interesting for me to learn about how her model was successfully used in the Arab countries that she visited this year. This inspires me to explore how this model can be used in my country and in Gulf Arab countries, both for trauma survivors and for survivors of other struggles.

Symposium presenters of Peace in the Middle East (from left to right): Drs Cohen, Kalayjian, Stout, Miller, and Wael

Dr. Laura Miller presented on the topic of trauma and ecologically informed humanitarian interventions in Egypt. I was most intrigued by her presentation when she pointed out that PTSD is associated with strictly categorical views (i.e. black and white) of reality which influences how people respond to reality. She added that this phenomenon, along with how violence is not experienced separately from other forms of violence and systemic issues, needs to be understood in order to understand the trends of interpersonal violence in Egypt. I also learned about how interventions that used the local *Imams* (religious priest or worship leader of a mosque) to teach content material of treatments were found to be most successful. I personally believe that it is important to map community resources, to gain trust from, and to collaborate with community leaders. I think that collaboration with religious leaders is particularly important in a community where religion is central to everyday life and to the cultural fabric of the country.

Aside from the symposium and meetings, I attended the APA Career Fair. The Career Fair was a miniature reflection of the reality I will be facing while looking for post-graduation jobs to sponsor me in the U.S. to obtain the

required hours for a LMHC license. On the bright side, I left my mark on artist Mark Cooper's sculpture, which was a collaborative art project among Convention attendees.

Despite my busy convention schedule, I had the opportunities to engage in sightseeing in Washington D.C. Overall, I hope that next year's Convention will continue to host events pertinent to international students, and to conduct events related to international research, Middle Eastern psychology, and ethnic psychology broadly. I am particularly interested in attending more discussions relating to international psychology students' transitions back to their home countries after graduation. I believe that such discussions can lead to a supportive community of likeminded international students and early career professionals committed to being global citizens rediscovering their home countries. I further hope that next year's Convention will include more events of relevance to non-Arab Middle Eastern countries, and not be restricted to Arab countries. Finally, I am curious if next year's Convention can host a more in-depth discussion about the lack of organizations and agencies that are willing to sponsor recent international graduates in psychology so that they can obtain their postgraduate clinical hours for licensure. Perhaps this could be accomplished in the form of a panel featuring advocates in this area, international students and early career professionals, hiring agencies in the field, APA leadership, and representatives from the US Department of Homeland Security Citizenship & Immigration Services.

Giving Away a World of Psychology: Reflections on Curricula, Training, and the Larger Field

Craig N. Shealy, Ph.D.
James Madison University
Executive Director, International Beliefs and Values Institute
shealycn@jmu.edu

I am pleased to accept an invitation to write for the

Teaching International Psychology column, as it provides a great forum by which to share some of the work of the Division's Curriculum and Training Committee as well as my own interests in this essential area of inquiry and practice. First though, we all owe Dr. Gloria Grenwald, immediate past chair of the C&T Committee, a deep debt of gratitude, not only for the substantive accomplishments under her tenure, but for her warm and inclusive leadership. I would not have assumed this position if she had not reached out in her characteristically open and encouraging manner, first vis-à-vis a symposium proposal on global education that colleagues and I conducted under the auspices of Division 52 in 2011, and in subsequent correspondence over the past few years.

So who and where are we now? As to who, I'm delighted at the composition of the C&T Committee, which includes a mix of new and familiar names to Division 52, including Drs. Merry Bullock, Gloria Grenwald, Craig Shealy, Lee Sternberger, and Rich Velayo along with Dr. Devi Bhuyan, as our early career member, and Pat Kenny, as student representative. As to where we are now, building upon the work of Gloria and her team, the C&T Committee continues to support an ongoing project to "internationalize psychology syllabi," which is gathering and disseminating examples of courses that emphasize the relevance and role of a global psychology for the next generation of psychologists. Along similar lines, in support of President Elect, Dr. Mark Terjeson's dynamic initiative to develop more web-based educational and training materials, we are participating in the proposal and assemblage of topic areas that are of greatest relevance to our current and future members. We also continue the tradition of coordinating and/or participating in the submission of annual symposia to APA, most recently via the newly developed collaborative system by which two or more divisions develop a proposal. Thus far, this process resulted in a joint submission with Division 32, Humanistic Psychology, entitled *International Humanistic Psychology: Implications and Applications from Research and Practice*, which was accepted and subsequently presented at the APA's 2014 annual conference in Washington, DC. As a final area of emphasis, the overarching goal of the C&T Committee – which includes the development and dissemination of relevant educational and training materials, experiences, and opportunities – is furthered via representation by Division 52 at a forthcoming summit series (described below) at my home institution of James Madison University, where I am a professor in our Combined-Integrated Doctoral Program in Clinical and School Psychology, which also has a strong commitment to international engagement. If you are interested in participating in any of the above activities of the C&T Committee – or would like to propose others that may be of relevance to Division 52 – please don't hesitate to contact me directly at shealycn@jmu.edu. In my relatively brief time thus far as C&T Chair, I have found the Division 52 Board and members to be a highly engaged and creative group of individuals, who are devoted completely to our larger and shared goal of "giving away a world of psychology" to the larger profession, other disciplines, and the public at large.

In inviting this column, Gloria suggested that I might offer some information about my own background and interests. I am happy to do so since it's important, I think, that we share our perspectives and experiences, as such information can provide helpful context and support to one another in the pursuit of our shared goals. For myself – and like many of us – I certainly did not imagine during my training as a clinical psychologist at Auburn University in the late 1980s and early 1990s that my own professional identity, teaching, and scholarship ultimately would become so deeply embedded in all things international. In retrospect, I suppose the signs might have been clear, from participation in a semester abroad program in London as an undergraduate, to the three or so years I spent in South Korea and Germany through the University of Maryland's system for teaching college courses

to military personnel, which culminated in running a small counseling center at UMUC's international campus located in Schwäbisch Gmünd, Germany. But even with these experiences, I didn't see myself at the time as an "international psychologist" per se, but rather as someone who simply had deep interests in understanding how the experience of different life events, cultures, and contexts affected who we become as human beings.

More specifically, like many who are drawn to our field, I always had been interested in why we experienced ourselves, others, and the larger world as we do; I was – and am – fascinated by the stories we tell ourselves about the nature of reality vis-à-vis the beliefs and values we declare to be self-evident. An early manifestation of these interests emerged even before doctoral level training, in comparing the beliefs of soap viewers and non-viewers in my master's thesis, via the Jones Irrational Beliefs Test (and yes, the former group did show "more" irrational beliefs, with all the requisite caveats regarding the need for more study). These preoccupations continued throughout my own graduate training, and were piqued that much more during internship and my postdoctoral year. Overall, the more I attended to the belief-statements from my clients, the more it became obvious that the stories we tell ourselves and others mediated every aspect of human functioning, from our implicit and explicit formulations regarding etiology, to attributions regarding why we think, feel, and behave as we do, to the assessment questions and treatment interventions we ultimately employed. So, beginning in my internship year, I simply began to take notes regarding the belief statements individuals, couples, and families made about the nature of reality. This practice continued during my teaching, scholarship, and practice overseas, and was extended to include belief statements uttered by other prominent humans (e.g., politicians), which resulted in hundreds of such statements over time. Ultimately, this content was adapted in the early 1990s into the first version of an assessment measure called the Beliefs, Events, and Values Inventory or BEVI, which since has been used in a wide range of contexts, from assessment, therapy, forensics, and leadership, to a multi-year, multi-site study of international, multicultural, and transformative learning (e.g., www.forumea.org/research-bevi-project).

Prompted by work with the BEVI, as well the terrorist attacks of 9/11, an interdisciplinary group of colleagues and I established the International Beliefs and Values Institute or IBAVI in 2004, which has as its mission "to explore beliefs and values and how they influence actions, policies, and practices around the world" (www.ibavi.org). Findings from many dissertations and other studies from the BEVI, and our ongoing work through the IBAVI, culminated most recently in an edited book with Springer Publishing called *Making Sense of Beliefs and Values* (www.springerpub.com/making-sense-of-beliefs-and-values.html). Among other initiatives, a similarly titled course was developed under the auspices of the IBAVI, and has been taught for many years now through the Madison International Learning Community at JMU, for which I serve as Academic Coordinator (www.jmu.edu/international/mi). And here is where paths directly converge, since another initiative of the IBAVI was the development of *Cultivating the Globally Sustainable Self*, a three-year summit series beginning in March of 2015, which examines and pursues a range of initiatives in research and practice (www.jmu.edu/summitseries). As mentioned above, Division 52 – along with additional partners in APA and other organizations – will participate in this summit series, which should help in the identification and development of teaching, training, and learning activities that are highly congruent with the mission and goals of our division.

From my perspective, the common denominator across all of the above work is a threefold contention: first, we can and must do a much better job of identifying the factors and forces that "make us who we are" as human beings, a goal that is best pursued by examining the similarities and differences among us around the world; second, we must juxtapose such understanding with other disciplinary perspectives if we are to apprehend the nature of human nature, and address the most pressing issues of our day; third, as educators, scholars, and practitioners, we have an obligation to engage one another as well as the next generation of psychologists and citizens in this essential dialogue as our world ineluctably is becoming more interdependent.

Within psychology, Division 52 – along with APA's Office of International Affairs, a key partner in this process (www.apa.org/international/) – offers a world of possibilities by which current and future psychologists may pursue these means and ends. Such perspective is advanced further by a forthcoming volume with APA Books, called *Going Global: How Psychology and Psychologists Can Meet a World of Need* – which focuses on who we are, what we do, and all we may become across nine interrelated areas of emphasis: advocacy, assessment, consultation, intervention, leadership, policy, research, service, and teaching. As co-editors, Dr. Merry Bullock, Senior Director of APA's Office of International Affairs, and I have been privileged to work with an extraordinary cohort of psychologists in the States and internationally, and can report unequivocally that the international future of our discipline and profession is as bright and promising as it is inevitable and necessary. In the context of Division 52, the C&T Committee will do its part to identify how, when, and why we may operationalize these aspirations and meet these needs that much more, and we warmly welcome your presence and perspective along the way.

Charles Darwin about the time "Origin of Species" was published (photo by Maull & Fox)

For the last forty years of his life, Charles Darwin (1809-1882) lived in a large rambling house in a small village located about 16 miles southeast of London. It was here that he raised his children and wrote his books, including *On the Origin of Species* (1859). But his home was also a refuge. Although he had literally traveled around the world, once he moved into his country home he rarely even ventured into London. He preferred the company of his large family and adoring wife – and the geographic isolation that allowed him more time for his studies.

Darwin's theory of evolution is recognized as a unifying construct for all of the life sciences. Nonetheless, it may be surprising to learn that his impact on psychology was particularly important. More than anyone, his half-cousin, Francis Galton, was responsible for bringing his ideas into psychology. While Darwin barely discussed the human condition in *Origin of Species*, Galton immediately saw the human implications of his work. Soon after reading the book, Galton began to develop his ideas about improving the human race, an effort that he labeled *eugenics.* And while eugenics itself has long fallen out of favor, it led to Galton's search for an intelligence test, his focus on individual differences, and his development of many statistical procedures still in use today. Many historians feel that the content of U.S. psychology owes a greater debt to Galton than to anyone else, emphasizing, as it does, adaptation and individual differences. Along with Galton, other pioneer psychology luminaries who identified Darwin as important to their work included Sigmund Freud, Ivan Pavlov, William James, James McKeen Cattell, and G. Stanley Hall.

Darwin's famous voyage on HMS The Beagle lasted from 1831 to 1836. It was during that 5-year journey around the world that he gathered the specimens that helped to establish his early scientific reputation. And although he did not speak of it publicly for several decades, his theory of evolution began to form during that journey. When he returned to England in 1836, he had changed from a young man without direction to a respected naturalist. His older friends had been sharing his letters and their insights with the larger scientific community. His father, who had once been so dubious about young Darwin's future, helped arrange his finances so he could pursue the life of a gentlemen scientist.

HMS The Beagle (sketch by R. T. Pritchett).

Charles debated whether he should marry, and only after making pro and con lists and considering all the possibilities did he decide to go forward with it. He proposed to his cousin Emma Wedgewood, she accepted, and they were married in 1839. They lived for the next three years in London

Finally, in 1842, with Emma pregnant with their third child, they bought a house in the village of Downe, sixteen miles southeast of London. (Soon after the Darwins moved to their new home, the village decided to change its name from Down to Downe so as not to be confused with County Down in Ireland. The Darwins stuck with their first name for Down House.)

Originally, their home was a box-like structure, probably dating from the early 1700s. On several occasions as the family became larger, the Darwins hired an architect to modify and increase the living space. Over the years it grew into an expansive and multi-faceted structure. (The Darwins would eventually have ten children in all, although three of them died in childhood.)

Down House

After Darwin's death in 1882, his widow moved closer to one of her sons and lived in the house in Downe during the summer only. After her death in 1896, the family rented the house. For two different periods, it was the site of a girl's school. In 1927, the home was purchased from the Darwin heirs with the specific intent of making it a museum to honor Darwin and his work. When the decision was made to turn it into a museum, one of the Darwin children, Leonard, was still alive. With his help, the home was restored with many of the original furnishings. The museum was opened to the public for the first time in 1929. In 1996, English Heritage, an arm of the government, took over the care of the house. They restored it even further and finally reopened it to the public in 1998.

Visiting the house and grounds is a rare opportunity to learn more about one of the most influential scientists of all time. A particular highlight of the site is his study where the bulk of Darwin's writing took place. It contains most of the original furniture. Also of note are the gardens in which Darwin took his daily walks, both for reasons of health but also to ponder his latest scientific questions. Audio tours are available. Between September and March, visitors may catch a glimpse of sheep grazing in the fields. Special events, such as stargazing nights, are held regularly on the grounds; a calendar is listed online.

Visiting Details:

Website: http://www.english-heritage.org.uk/daysout/properties/home-of-charles-darwin-down-house/

Hours: Open Saturday and Sunday, 10 AM to 4 PM (last admission at 3:30). Closed on major holidays.

Admission:

- Adult: £10.30
- Child: £6.20
- Student/Senior: £9.30
- Family (2 adults, 3 children): £26.80

Address: Luxted Road, Downe, Kent - BR6 7JT

Public Transport from central London:

- Take the National Rail (Southeastern Line towards Ramsgate) from London Victoria Station to Bromley South Station. Transfer to the 146 Bus. Exit the bus at Downe Church and walk up Luxted Road for about ½ mile.
- Take the National Rail (Southeastern Line towards Tunbridge Wells) from London Bridge Station to Orpington Station. Transfer to the R8 Bus. Exit the bus at Downe Church and walk up Luxted Road for about ½ mile.

Driving: Off the A21 or A233. Parking is available on site free of charge.

Live, Learn, and Love Haiti: Profile of Haitian Clinical Psychologist Guerda Nicolas

Cidna Valentin, PhD
The City University of New York
cvalentin@gc.cuny.edu

Wismick JeanCharles, PhD
Université Notre Dame d'Haïti
wjeancharles@undh.edu.ht

Introduction

The life and work of Haitian clinical psychologist, Guerda Nicolas, is perhaps best captured by the South African principle *Ubuntu*. Ubuntu, deriving from the language of Nguni people in southern Africa (Kamwangamalu, 1999), refers to values of interdependence, fraternity, and humanity (Swanson, 2007). Although phonetically varied across other African regions (Kamwangamalu, 1999), the essence of the term remains the same in any language and can be translated in English as, "I am because we are" (Kidjo, 2014). Dr. Nicolas' 20 years of professional and personal contributions to advancing the study and practice of psychology in Haiti and among the Haitian diaspora in the United States is an impressive illustration of this profound and deeply meaningful concept.

After the January 2010 earthquake in Haiti, Dr. Nicolas was the premier expert on Haitian mental health sought by news media including CNN, BBC, NPR, and Haitian radio broadcasts *Radio Solidarite* and *Tele Diaspora*. Her poignant views on the post-earthquake response could also be read in articles written for the wider audiences of the *Caribbean Journal* and *Times Magazine*. Although her service to Haiti began many years prior to the earthquake, she has dedicated the past 10 years of her scholarship to making her work on Haiti more accessible to the academic community as well as the general public. In the 20 years since completing her doctoral training, Dr. Nicolas' professional profile includes over 50 scholarly publications, 100 professional presentations, workshops, and trainings, and 15 years of leadership in various capacities for several organizations including the *American Psychological Association* (APA), the *Institute for the Study and Promotion of Race and Culture* (ISPRC) at Boston College, the *Haitian Studies Association* (HSA), the *Haitian Psychological Association* (HPA), and the *Caribbean Psychological Association* (CPA), to name just a few. She has also been successful securing substantial funds for several youth-related projects through prestigious federal and private grants, with two of her six ongoing research and mentorship projects funded by the National Institute of Health (NIH) and the National Center for Minority Health and Health Disparities (NCMHD). Additionally, she has held academic appointments at Iona College, College of Saint Elizabeth, and Boston College. In 2008 she joined the faculty of the Educational and Psychological Studies Department at the University of Miami. She was soon named chair of the department in 2009 and recently completed her 5-year term.

An avid reader, Dr. Nicolas enjoys biographies and books grounded in history. She likes to "learn lessons" from the life stories of others. During the interview for this Heritage Mentoring Project article, she recommended, because she is always and foremost an educator, *Silencing the Past: Power and the Production of History*, by Haitian anthropologist and historian, Michel-Rolph Trouillot (1997). Trouillot's acclaimed work encourages readers to ascertain and apply the accounts of diverse "voices" in recording history. Fittingly, Dr. Nicolas' personal and professional history provides important insights and lessons for our international community of psychologists.

"I am"

The mother of two musically and theatrically talented daughters, 14 year-old Tatyana and 11 year-old Alexis, Dr. Nicolas teases that her daughters' musical and theatrical gifts were not inherited from her or her former husband. Describing her daughters as "amazing," "grounded," and "leaders in their own right," she boasts about Tatyana and Alexis' astuteness and mastery of issues related to social justice. Conceivably, the girls' interest in these topics can be traced to their mother's career-long commitment to the same issues, which Dr. Nicolas would attribute to the women who came before her.

Like in many Haitian families, Dr. Nicolas' grandmother held a major role during her upbringing in Grand-Goave, Haiti, where Dr. Nicolas was born and raised. "Gran-Grann," as Dr. Nicolas refers to the presently 97 year-old matriarch, helped define her identity and imparted values about community and spirituality. "She reminded me that I am a child of God and that I was meant to live a life of purpose. She taught me about life and about connecting with people," said Dr. Nicolas. She remembers vividly that Gran-Grann's wise words were delivered after a near-death experience during her childhood, in which a pot of hot soup accidentally fell on to her. Hospitalized for a year, Dr. Nicolas' grandfather began to prepare for the funeral, while her grandmother continued to treat the burns through Haitian ethnomedical methods. Thankfully, the coffin that her grandfather built was never used, as Gran-Grann's herbal remedies healed the severe burns to 90% of Dr. Nicolas' skin. Dr. Nicolas attests that presently there "are no visible signs" of the injury on her body.

Never having met her father, Dr. Nicolas' mother and grandmother were the pillars, or *poto mitan* in Haitian Kreyol, of the family that included Dr. Nicolas and her two younger siblings, Yveline and Kevin Jean. At the age of 14, Dr. Nicolas and her mother immigrated to the United States,

where she reunited with her mother and met her sister Yveline for the first time. The family soon settled in Brooklyn, a borough of New York City that she still considers home. She entered high school with future ambitions of working with children and families as a pediatrician. She recalls amusingly that those dreams came to a halt when she was assigned in an advanced biology class to dissect a human brain. Fortunately, her experience as a peer counselor, also during high school, steered her towards psychology.

When she started her undergraduate studies, Dr. Nicolas knew that she desired to work with people directly. She explains that at that time, clinical psychology was the most popular career choice for the professional practice of psychology and she was inspired by the many clinical psychologists within her academic network who modeled for her the type of professional she wanted to become. She suspects that she might have chosen differently had she been more exposed to counseling psychologists at this juncture in her education. She would later in her profession come to identify more strongly with counseling psychology's strong orientation in multiculturalism and social justice. Ultimately, Dr. Nicolas graduated from Rutgers University with bachelor's degrees in psychology, French, and Spanish. She then went on to pursue a master's degree at Fairleigh Dickinson University and a PhD at Boston University, with both graduate degrees in clinical psychology. It was while she was completing her pre-doctoral internship at Columbia University that she considered exploring more seriously a career in academia.

From the beginning, Dr. Nicolas envisioned herself as a community psychologist who cared for children and families through practice. Before internship, she was certain that she would return to Brooklyn and become what she had originally intended. The idea of becoming a researcher and teacher was first sparked while a 2nd year doctoral student at Boston University. Lecturing a course on Physiological Psychology, it was the feedback from students who enjoyed her dynamic teaching style that would force her to reflect on her career goals. She realized that she had never considered an academic career because she had never "seen" anyone who looked like her in the academy. In other words, she had lacked examples of scholars of ethnic and racial minority backgrounds throughout her academic training.

Dr. Nicolas' career in academia began with the intent of being a model for upcoming scholars of color. In addition, she felt an obligation to "do the work and do it right because it has implications." Following internship, Dr. Nicolas accepted a postdoctoral fellowship at Columbia University, where she would first learn how to "do the work." The work, for which she felt greatly responsible, would involve instruction and research on issues pertaining to mental health services for ethnic and racial minority groups. Remaining committed to children, families, community, spirituality, and social systems, she studied in Philadelphia at the *Minuchin Center for the Family* after her postdoctoral training.

Since her doctoral training, Dr. Nicolas' scope of research has derived from many perspectives and has followed a variety of directions. She has maintained her commitment to communities of color, in spite of the negative response she received initially about her interest in marginalized groups. In the brief period that she has devoted to writing peer-reviewed articles, book chapters, and for print media, Dr. Nicolas has investigated with rigor complex psychosocial issues. Whether she is addressing the ontology of PTSD and resilience in Haiti (Nicolas, Wheatley, & Guillaume, 2014), depression in Haitian women (Nicolas et al, 2007), or the validation of psychological instruments for youth of color (Nicolas, DeSilva, Houlahan, & Beltrame, 2009), she has remained focused on populations under-examined and often misunderstood. Fluent in Haitian Kreyol, Spanish, and French, she is a strong advocate for interventions oriented in the culture of its recipients and uses her multilingualism to discern and represent the needs of the communities she serves through practice and scholarship.

In the early stages of her career, Dr. Nicolas attempted to broaden her research inquiry to include studies of popular interest at that time. Yet, her desire to be more proactive in deconstructing the common narrative about populations of color drove her back to her original aims. She became interested in producing a body of literature that would contribute to understanding the mental health experiences of people of color. She became especially dedicated to voicing the experiences of Haitian people in the US.

"We are"

Dr. Nicolas credits her enormous productivity in the past two decades to her heritage. She says modestly, "I have a lot that I owe Haiti for," although she does not consider her dedication to Haiti an obligation. She believes deeply that Haiti and being Haitian has greatly influenced the person and professional that she has become. Her work in Haiti began as a personal quest to "give back" to a beloved country and people. Her strong sense of identification with a "group of warriors and fighters" sculpted her determination to continue in spite of challenges in life. These same qualities were never more evident among the millions of Haitians living in Haiti, the US, Canada, Europe, Latin America, Africa, and elsewhere than on January 12th, 2010.

"The 12th", "goudou-goudou," or "tranbleman te," as the 2010 Haitian earthquake is referred to among Haitians, marked a critical point in Haitian history. With over 300,000 Haitians killed and 1.3 million displaced (USGS, 2011), the 7.0 magnitude earthquake devastated the nation. While the international response was widely covered in news media globally, much less reported was the response of local Haitians as well as Haitians from the diaspora.

Dr. Nicolas had returned to Miami from Haiti just two days before she received a call from a friend wanting to know her current location on that Tuesday afternoon. The friend informed her of the news and because Dr. Nicolas traveled to Haiti often, the friend worried that she might have been affected. Feelings of powerlessness and anger overwhelmed Dr. Nicolas in the days after the earthquake as she followed graphic news stories and attempted to connect with family in Haiti. For many, the first week after the quake was torturous as mass telecommunication delays prevented

families from corresponding with relatives on the island. She later learned that some friends and an uncle had been victims of the disaster.

Soon after, Dr. Nicolas became compelled to initiate a community healing process among Haitians in South Florida. *The Healing Little Haiti Project* provided a space for Haitians of all generations to discuss their concerns about the earthquake and its impact on their families. Tablets in-hand, community health workers with the project met with community members of the predominately Haitian neighborhood of "Little Haiti" in Miami to assess how they were coping with the event. *Vicarious trauma*, *re-traumatization*, and *acute distress* evidenced as the major themes of discussions with community members. The team also held meetings with key stakeholders to educate on related mental health topics, such as PTSD, and to provide more accurate information on the relief response.

In addition to *The Healing Little Haiti Project*, Dr. Nicolas extended her knowledge and perspective after the earthquake to two other projects upholding the values of community-driven programs. *Rebati Sante Mentale Haiti*, or Rebuilding Haiti's Mental Health, was formed by Haitian mental health professionals in Haiti, the US, and Canada in response to the lack of mental health services for those affected by the earthquake. Convened at a summit at the University of Miami in June 2010, the group originated as a taskforce and soon evolved into a structured nonprofit organization with projects targeting Haiti's mental health policies. Since 2010, the group has continued to hold conferences annually. The organization works closely with the Haitian Ministry of Health to meet their objectives, establishing themselves as a multilateral clearinghouse and a resource bank for international groups planning to implement mental health programs in Haiti.

Residents of the northern Haitian cities of Arcahaie and Cap-Haïtien have also benefited from programs led by Dr. Nicolas. In partnership with the Massachusetts School of Professional Psychology (MSPP), and Haitian clinical psychologist Gemima St. Louis of the *Haitian Mental Health Network* (HMHN), the *Teachers Mental Health Training Program* (TMHT) was developed to offer teachers in Arcahaie and Cap-Haitien comprehensive training on various mental health topics to better serve students in Haiti (St. Louis, 2014). The program was designed in close collaboration with community members, thus lending to the creation of culturally-relevant and sustainable interventions. In addition, MSPP graduate students participate in the program through a week-long service learning component of a summer course offered at MSPP. The course introduces students with interest in Haitian populations in the US and Haiti to Haitian culture, history, and current issues. While in Haiti, graduate students work alongside the program directors, Haitian teachers, and local non-profit representatives to facilitate relationships and expand networks among community members.

The Haiti Legacy Project is another example of Dr. Nicolas' commitments to Haiti, psychology, and education. Established in 2013 and funded by the Kellogg Foundation, the primary purpose of the project is to promote awareness of Haitian history and its inclusion in curricula, particularly for Haitian educators. Visitors can find academic and non-academic articles, sample curricula, links to documentaries, music, and art on the project's website. Through education, the project aims to provide ample insight into Haitian culture and psychology, while forging links between generations of Haitians. These linkages, by Dr. Nicolas' assessment, have been difficult to form due to the preceding generations' discontents and fears of sociopolitical issues in Haiti. In spite warnings from their parents about being involved in Haiti, Dr. Nicolas observes that the current generation of professionals of Haitian descent in the US has been "relentless." From practice to scholarship, Haitian-Americans proudly stand at the forefront with more senior professionals in reconstructing the narrative about Haiti. The team of early career and senior professionals who direct *The Haiti Legacy Project* serves as testament to intergenerational collaboration among Haitians.

Dr. Nicolas' effort to expand networks among generations of professionals has not been limited to Haiti. The *Caribbean Alliance of National Psychological Associations* (CANPA) was first conceived 10 years ago at an APA symposium. The founders, Dr. Nicolas and Bahamian psychologist Dr. Ava Thompson, grew dissatisfied with the lack of organization and representation of Caribbean psychological associations at annual APA conventions. With the support of APA's Office for International Affairs, in addition to much diligence and undertaking, CANPA was officially launched in 2013 at the *Caribbean Studies Association* (CSA) annual conference in Grenada. In 2014, the alliance hosted its first conference in Suriname under the theme, "Caribbean Psychology: Unmasking the past and claiming our future." The national psychology associations of Puerto-Rico, the US Virgin Islands, Martinique, and Jamaica are also represented in the association. Dr. Nicolas believes that the alliance provides a platform for building bridges as well as the capacity of psychological organizations in the Caribbean.

When asked what she has found to be her most important contribution to Haitian mental health, Dr. Nicolas responded, "Designing projects that are not 'Guerda-dependent.'" Although she has sought to discourage developing projects that solely rely on her involvement, her community-focused and action-oriented attitude has spurred the same dedication in those who have benefited from her work. Perhaps, constituents of her projects have become "Guerda-inspirited" instead of dependent. By upholding her commitment to her lineage, culture, and personal values, Dr. Nicolas has achieved enormous success in creating interventions that are collectively inspired and motivated.

Conclusion

It is through Dr. Nicolas' strong devotion to family, community, and Haiti that her professional story has come to embody the values of the South African world-view of Ubuntu. Firmly believing in partnership and the collective responsibility of groups to affirm, educate, and empower one another, Dr. Nicolas has exemplified this cultural perspective throughout her career with her many contributions to Haitian mental health.

Gardening, one of her favorite hobbies, has also been a great source of inspiration for her life. She likens the process of nurturing rare flowers in her home garden to the "tilling" and "watering" of relationships. In the relationships with her daughters, grandmother, students, and colleagues, Dr. Nicolas has sown several seeds, the harvest of which many will reap. It appears that Dr. Nicolas' grandmother, Gran-Grann, was responsible for planting the first seeds. Although Gran-Grann might not quite understand the broad impact of Dr. Nicolas' professional activities, Dr. Nicolas knows that she is proud.

Encountering Culture: Psychotherapy and Counseling Practice in India

Gayitri Bhatt, MD, MSc
Bangalore, India
gayitribhatt@gmail.com

Western or scientific psychology was introduced in India in 1905 at Calcutta University (Prasadrao & Sudhir, 2001). In 1915 a full-fledged department of psychology was instituted and Girindrashekhar Bose, a practicing Indian physician, became the first recipient of a doctorate in psychology in 1921. In 1922, Bose founded the Indian Psychoanalytic Society. After India became an independent democracy in 1947, premier mental health institutions were set up for providing preventive, curative and rehabilitative health care. National Institute for Mental Health and Neurosciences (NIMHANS) in Bangalore and Central Institute of Psychiatry in Ranchi were the earliest centres offering higher education in psychiatry, psychiatric social work and clinical psychology. Psychotherapy became an essential component of these qualifications (Neki, 1995). Fifty years down the line, the earlier trend of medicalized treatment has given way to counseling services (George & Thomas, 2013). There is greater mobility of Indians within the country and abroad, and people in larger cities and towns are asking for therapeutic counseling, to deal with emotional issues. Modernization and changing lifestyles seem to increase the need for therapy and also make it an acceptable form of help.

A Changing Society

Globalization has transformed the cultural landscape of India. Growth of industries and migration from rural to urban centers has created the promise of economic wellness as well as disappointments. Education and employment of women, especially in urban areas, call for reorientation of roles, responsibilities and power between genders, a welcomed shift for many women. Availability of mass media and modern communications has exposed people to ideas from western societies that led to a shift towards pursuit of personal goals and profit making enterprise (Carson & Choudhray, 2000). Among the concerns of current times are marital strain, parent-child conflicts, domestic violence, delinquency, substance abuse, low achievement in poorer families, and stress for high academic achievement in the higher income groups. Family bonds are affected because the joint family system that promotes collectivist values such as cohesion and interdependence is no longer the norm, especially in cities. Child rearing practices foster earlier independence for young adults. Indians who come to therapy may have worldviews that are very traditional, quite modern or a mix of both. There are clients in difficult marriages yet avoiding the stigma of divorce. There are progressive young adults living together without being married and talk openly about cohabiting. In addition, there are joint families where couples struggle to save their marital relationships in the face of intergenerational conflicts. Interdependence also continues by elders being involved in arranging marriages, helping in child rearing, and old parents living with adult children and being cared by them. 'Compartmentalization', the ability to function with newer skill sets or values in one area of life and retain the older values in another area, serves well as an adaptation to modernisation (Singer, 2007).

Evolving Culture of Psychotherapy

Systemic theories from the West are fairly applicable but certain peculiarities of Indian families call for slightly modified treatment strategies. Nath and Craig (1999) remind us that marriages in India have always been more than an alliance between the spouses unlike the West where it is a bond between two 'individuated' persons. The conflicts that clients present can challenge the counselor to examine their own value system. The effort to preserve the resilience of families and mental health of individuals against stresses of modern times has resulted in a significant development in family therapy services. Family therapy in modern India offers ways to strike a balance between the "tyranny of the collective and the alienation of individualism" (Oommen, 2000; as cited in Carsen & Chowdhury, 2000, p. 398). Mental health professionals have been able to engage families as an effective system of care when treating individuals with mental illness such as Schizophrenia (Chadda & Deb, 2013).

Training of counselors has received more attention only in the last two decades although there were many established departments of academic psychology in the country. The need for counseling and guidance for a growing population in schools and colleges has led to starting a number of postgraduate courses in counseling psychology (Arulmani, 2007). Institutions such as *Parivarthan* in the south Indian city Bangalore, offer training in counseling for mature middle-aged individuals from non-psychology background and ensure rigor through appropriate supervision (www.parivarthan.org). There are other practitioners oriented towards Transactional Analysis and maintain allegiance to the international TA association. A committed group of professionals has meticulously introduced EMDR training to psychologists, counselors and social workers (www.emdrindia.org). There is renewed interest in psychoanalysis in various metropolitan locations such as Delhi and Ahmedabad. One can also meet Jungian analysts in India who advocate the healing potential of dreams and mythological motifs. Service providers and users are capitalizing on the technologies available for long distance counseling. The variety of professionals available in urban India matches the plurality of the culture itself.

Cultural psychology is an emerging field and many of those who come to study bring their individual concerns reflecting social realities (Sapru, 1998). Psychology helps the students to articulate these concerns and find ways to cope, which in turn contributes to wider social transformation. Counselors trained in Western models effectively assimilate the cultural context in helping individuals and couples to find a balance between their relational and individual needs (Bala, 2007). Reviewing literature on psychotherapy practice in India, Manickam (2010) observes that while the authors' theoretical orientation to therapy varied over the years, a consistent concern for most of them was to assimilate indigenous concepts to meet client needs. Smoczyinski (2012) explores how counselors trained in Western approaches to counseling adjust their practice at an urban counseling center in Bangalore according to the local context. She views this process of adaptation in terms of *glocalisation,* drawn from the field of social constructionism. According to this concept, practice from one part of the world is transferred as an abstract idea to another part where it is actively received, modulated and put into further practice in this other context. Another critical concern facing professional therapists across the country is to collaborate towards consolidation of ethical guidelines and regulation of counseling and psychotherapy practice in India.

Encounters with Culture in the Therapy Space

India is a multilingual society. Training at universities and training institutes is conducted mostly in English due to availability of standard texts and training resources. Neki (1995) urged his contemporaries to attend to psycholinguistics because how people speak can say much about the mind structure and cultural stance towards life and living. A few professionals have undertaken translation of psychological concepts into a vernacular form despite some inherent challenges. Many English terms such as 'shame' cannot be substituted with Indian words conveying the same connotations just as certain cultural expressions cannot be expressed accurately in English. Nonetheless, a majority of therapists are likely to be conversant with at least one Indian language and do not hesitate to tune into a client's preferred mode of communication. Therapy in context, then, truly becomes the co-creation of all participants. Some lighter moments are experienced when the client can sense the therapist's genuine effort and correct their vocabulary, making for warm bonding between both.

The role of emotions in human experiencing is an important issue to contend with when applying constructs originating from a different culture. While physiological processes involved in regulation of emotions may be the same for all people, it is increasingly acknowledged that *cultural regulation* plays a significant mediating role (De Leersynder, Boiger, & Mesquita, 2013). Indian art and literature offer an enormous vocabulary and discussion on affect and emotion. Yet like other Asians, traditional Indians believe that emotions such as anger are damaging to relationships and are to be avoided in everyday life. It is hard for them to participate in exploration of feelings. Indian therapists of yesteryears who noticed this in their clients called it a 'cultural defence' (Varma, 1986). In such cases, mythological stories or fables allow for a profound sublimation of difficult emotions in the presence of a compassionate observer. Stories with relevant themes or characters can be spontaneous expressions from clients (Ramnathan, 2013). At other times, the therapist takes a lead to evoke the necessary image and aspired coping (Bhatt, 2010).

The egalitarian stance advocated by Western approaches is a much debated issue and many therapists have written that it is unhelpful and ineffective in the Indian context (Neki, 1979). In contemporary times, such difficulties are seen less frequently yet not completely absent. Clients asking for advice and anticipating direction is not uncommon. In a study by Smoczyski (2012), several counselors describe how they manage such a challenge by carefully exploring the client's worldview to elicit the advice or solution being sought and offer it back in in a constructive form. Arulmani (2009) has proposed that *cultural preparedness* is a necessary condition for counseling to be effective in non-western communities. He describes it as the ability to provide culturally relevant counselling that matches the client's expectation. A therapist may find herself being greeted with a handshake by a man and with a *Namaste* (i.e., joining both hands) from his wife (Bhatt, 2010). Some clients, including English-speaking individuals, can be at a loss when asked to address the therapist by first name because it is a practice that is common only between equals. Indians amongst other Asians who grow up in a Western environment often seem to function independently in some areas of life and yet in other spheres demonstrate deep-seated hierarchical attitudes as inculcated in their families (Kakar, 2003). In a society that has a hierarchical structure, tradition assigns roles, tasks and position, based on age and gender. Men, older members and individuals with valued qualities or qualifications are ascribed a higher place. The person lower down in the order expresses deference and the other in the higher role reciprocally offers caring and protection. Chin (1993) observes a 'hierarchical transference' when working with Asian clients in America. She suggests that for some clients it is facilitative to transcend the hierarchy and for some it is beneficial to reciprocate as expected.

Neki, a leading psychiatrist in the 1970s, observed that Indian clients often tended to look up to the therapist as a *Guru* (Neki, 1979). According to him, Indian society traditionally promotes social dependency and dependability. Within this cultural context it was reasonable, that clients considered a therapist as a teacher who could show them a way out of dilemmas. However, this attitude seems to be waning. Today's therapist is more likely to be seen as a consultant or a collaborator, going by the comment, "If the middle mental space between the body and the soul needs repair, the doctor or the guru is no use, it needs its own specialist to heal it" (Vishwanathan, 2005, as cited in Wadhwa, 2005). Based on conversations with professionals across several cities of India, Wadhwa (2005) reports that over the last decade urban Indians openly acknowledge their vulnerabilities and seek therapy proactively compared to earlier days when many

patients were referred by their doctor. Some clinicians still maintain that talk therapy is less effective when patients present with physical complaints, which are more socio-culturally acceptable ways to receive attention. These individuals speak less and still expect the doctor to understand their mental state (Wasan, Neufeld, & Jayaram, 2008). When hard pressed for time, many psychiatrists are likely to use medications to get maximum impact in shorter time. There are, however, psychiatrists who keenly practice psychotherapy or refer their patients to counselors (Bhatt, 2010). Furthermore, there are therapists who also advocate other forms of healing that their clients can benefit from. The alternate methods are seen to address the person's inner conflicts through different but equally plausible interpretations mediated by metaphors and archetypes relevant to their cultural identity. Moodley (1999) describes how an Indian client who lived in the West could be helped through talk therapy up to a point and was further healed successfully by an indigenous 'doctor'. In retrospect, he believes, it was wise to hold back an interpretation of 'splitting' because the client found an integration of his 'divided selves' with the other practitioner.

Integration and Grounding

The acceptability of Western psychotherapy and counseling professionals has not diminished the popularity of older healing practices (Arulmani, 2007). The Eastern approach cannot conceive of a separation between psychology and spirituality since both are concerned with the study and understanding of human nature (Varghese, 1998). According to Ayurveda, a traditional system of life science in India, wellness is a delicate balance between the mind, body, and spirit. Yoga offers time tested means to regulate the body, the breath and the mind leading to stillness- "observing transforms the observer- a radical resolution for inner discord and almost a God experience", describes Rao (2008, p. 299). Yoga and *Vippasna*, another Eastern discipline, commonly referred to as Mindfulness, are being incorporated into psychotherapy in the West as they overlap in their goals of helping a person to develop unconditional friendliness to oneself. Folk wisdom directs people to undertake regulated activities through social, vocational, creative and religious commitments, as meaningful engagement in life can help to develop equanimity. Communal practices such as musical chanting or attending discourses based on various philosophical texts remain popular for seeking solace or insight. Other sources of support are Meditation, *Pranic* healing, and Astrology. The cultural tradition of India is spiritual and this tradition includes influences of religions, religiosity, practice of various rituals and festivals (Arulmani, 2009; Thomas, 2010). It is not unusual for a Hindu to consult a Fakir (i.e., a Muslim sage) or visit particular churches associated with healing images of a Christian god or saint. Psychotherapy and counseling practice in India is positioned to be enriched by all streams of knowledge. Western psychotherapy offers a way to address the panic in the journey towards the unknown and strengthen an ego, which can only then be surrendered in the spiritual quest (Varma, 2004).

The 24th U.N. International Day of Older Persons

Priyanka Srinivasan
Fordham University
psrinivasan@fordham.edu

On October 9th, 2014, the annual celebration of Older Persons was held in the ECOSOC chamber of the United Nations HQ in New York, as several attendees filed in for this year's International Day of Older Persons event, themed "Leave No One Behind." This year's conference was presented by the NGO Committee on Ageing/New York as well as UNDESA (UN Department of Economic and Social Affairs) and was sponsored by the Permanent Missions of Argentina, El Salvador, Slovenia, South Africa, and Thailand as well as Pfizer Inc.

James Collins, the Chair of the NGO Committee on Ageing/New York, began the introduction of the programme at 10 a.m., introducing other introductory panel members as well as the day's mission: to include the interests of older persons in national decisions make ageing an inter-generational as well as an international issue. He acknowledged the diverse ages in his audience. Mr. Collins is also a representative of the International Council on Social Welfare at the UN, and a member of the NGO Committee for Social Development, as well as having been actively involved in several public service organizations, advocating for older persons.

Following his presentation, Mateo Estrémé presented his message on the theme "Leave No One Behind." Mr. Estrémé discussed the importance of distinguishing age from its social construction that 60-65 is the threshold after which one becomes an older person. Rather, Mr. Estrémé recognized the importance that this threshold is vastly changing and that it may be different for everyone. He also advocated the fact that social rights and benefits should be more accessible and available to older persons as the number of older persons continues to increase. The inclusion of older persons will be incorporated in the post-2015 agenda of the UN.

Daniela Bas, the Director of the Division for Social Policy and Development (DSPD), relayed a message from Ban Ki-Moon, the highly regarded Secretary-General of the United Nations. Ms. Bas noted that as healthcare is constantly and exponentially improving, the human lifespan is increasing, and so naturally the number of older persons is also constantly increasing. In fact, Ms. Bas declared that by 2050, the number of older persons is expected to double to 2 billion. As the elderly continue to make up a larger and larger part of the population, it is counter-intuitive to exclude them and their interests in any way; yet this discrimination continues to persist. With the post-2015 agenda, Ms. Bas remarked that the UN wishes to take into account the rights and securities of older persons and "leave no one behind."

The original keynote speaker Amina Mohammed was unable to reach the conference, so Paul Ladd, the head of the UNDP's organization team for the post-2015 development agenda, spoke in her stead. Addressing the subject "Older Persons and the Post-2015 Agenda," he noted that the post-2015 agenda would be age-blind. He also promoted "A Million Voices: The World We Want" that was published and that surveyed voices around the world on the topics people felt were important to address. In this, the top 7 priorities for all, including older persons, were about the

same: education, healthcare, that the government needed to be more caring and inclusive, the job sector, food, water and sanitation, and protection from crime and violence. He also noted several things to benefit older persons, such as green spaces and transportation systems. Overall, Mr. Ladd promoted the universality of the post-2015 agenda, and that all people want to and should be part of its creation and implementation.

After a short break, Sering Falu Njie introduced and began moderating the interactive panel session themed "Breaking Barriers: Sharing Successful Innovative Approaches to Ageing." As well as introducing the panelists, he introduced the Millennium campaign as well as the "A Million Voices: The World We Want" website containing all things happening related to the post-2015 agenda.

The first panelist was Marta Benavides, a human rights advocate for the Alliance for Sustainability for Sustainable Peace, who provided her own words as well as translating those of Cesar Cartagena, the Executive Director of the 'Asociacion Nueva Vida Pro-Ninez y Juventud.' She emphasized the importance of creating the world that is "needed" and not necessarily the one that is wanted. Ms. Benavides also stressed that civil society should direct government to carry out what is needed for society, and it is important to work together for the "manifestation of peace."

After Ms. Benavides' message, she translated for Cesar Cartagena, who spoke about both of their presences at the UN, and how they represent the intergenerational aspect of ageing. He acknowledged the existing mentality, that when youth are old enough, older persons should move out of the way and hand everything over to younger persons. He stressed the fact that the post-2015 agenda was created for those who suffer exclusion. It is important to educate people and bring diversity of all types, including age, to the table, and make the agenda transparent so as not to exclude older persons.

After Mr. Cartagena's speech, Mr. Njie remarked once again that Ms. Benavides and Mr. Cartagena so relevantly demonstrated an "intergenerational alliance" as they presented together.

Vladimir Cuk, the Executive Director of the International Disability Alliance, spoke next on the "Intersection of Ageing and Disabilities." He noted that older persons are more susceptible to disabilities, so the voices of people with disabilities should also be heard, because older persons and the disabled "naturally" support each other's goals.

The next presenter was Akiko Ito, the Chief of the Secretariat for the Convention on the Rights of Persons with Disabilities/DSPD/DESA at the United Nations. She addressed "Leading the Way – Older Persons with Disabilities"--continuing the conversation that Mr. Cuk began. She offered inspiring examples of older persons who are in art, politics, and other fields, highlighting that disabilities are a "cross-cutting issue" with ageing and that the relation stems from the belief that everyone should be valued regardless of age, disability, or anything else.

David Ryan came from Intel to speak about the innovative and technological future for older persons. He noted that older persons should not be stereotyped as people who cannot do much, but rather should be seen as still fully active, and socially connected--those who *can* do rather than *cannot*. He introduced the RealPad, an AARP tablet that is an accessible, in-hand technology for older persons that can be easily used in the home. Mr. Ryan also remarked that most older persons will suffer a disease of the nervous system sometime in their lives, and since physicians can usually tend to patients no more than once a week, he initiated the idea that technology should exist to constantly track health. To wrap-up, he summarized that care should be everywhere for older persons to access, so that seniors can live an "independent life."

The last panelist, Stephen Johnston, continued Mr. Ryan's conversation about ageing and technology. He provided the interesting fact that there are around 4 billion toothbrushes in the world, but around 5 billion electronic devices, which shows that the world is moving towards "super-connectivity." Mr. Johnston introduced Telehealth, a technology that uses facial expressions to interact with older persons, and advocated for the use of virtual reality to produce joy, as well as the social interaction of older persons in senior housing communities or even with robots that are used as company.

Following the panel, an interactive question and answer session was moderated by Mr. Njie. The panelists answered questions from the audience, remarking on the disparities in technology access and communication around the world; the importance of a global network; discrimination that occurs in the senior community among the disabled, LGBT community, and those suffering from HIV/AIDS; as well as partnership and the inclusion of all people and generations.

Last but not least, Mateo Estrémé, the Chair of the Open-Ended Working Group on Ageing, provided a 'status report.' He noted some conflict in that some countries believe the situation is well as it is, while others see the need to improve. Mr. Estrémé said that now that the issue of the exclusion of older people is being addressed in the post-2015 agenda, the UN will "continue to be engaged" until the problem is resolved.

Katherine Kline, the Chair of IDOP 2014, made closing remarks, to thank the panelists, and encourage countries present for IDOP to help this issue gain more visibility. Details appear at http://www.un.org/en/events/olderpersonsday/

Examining mental health effects of the Ebola crisis in West Africa

Nira Shah, Ed.M.
RSC Africa/U.S. Refugee Admissions Program
shah.niras@gmail.com

Overview

In 2014, the Ebola virus disease erupted, causing worldwide illness, mortality, and fear of a potentially fast-spreading pandemic. The virus spreads through human-to-human transmission via direct contact (through broken skin or mucous membranes) with contaminated areas. The time from infection to the onset of symptoms (the incubation period) is two to 21 days, with symptoms becoming increasingly worse with time. The fatality rate averages 50%, while past outbreaks have shown fatality rates between 25-90%. The current Ebola outbreak occurred in West Africa in March 2014 and has been the largest and most complex outbreak since the virus was first discovered in 1976. The most severely impacted countries are Guinea, Sierra Leone, and Liberia; and very weak health care systems and the lack of resources have made the outbreak most challenging (WHO, 2014). While fear has been in the forefront of what the WHO declares is a Public Health Emergency of International Concern, what have been the primary mental health and psychological impacts and how are they culturally responded to?

Figure 1.Statistics as of December, 2014. TIME, 2014. Source: WHO

Impact on individuals and communities

The impact of the outbreak has created devastating effects on systemic levels, which is of particular consideration, as community plays a strong role in life in these Western African areas. In affected communities, in order to prevent Ebola from spreading, individuals who may be infected are placed into quarantine for 21 days. As family and community systems in West Africa serve as important practical, social and emotional supports, such an isolation period has serious consequences. Separation from quarantine can often lead to sadness and feelings of hopelessness. Isolated individuals may inherit feelings of guilt and shame if they feel they could endanger family members or are unable to work to support them (IFRC, 2014). The actual quarantine conditions have also produced severe psychological stress for patients, including feelings of humiliation and shame (Persaud & Morris, 2014). A study in 2004 of SARS quarantines showed that the psychological distress of quarantine includes symptoms of PTSD and depression (Hawryuck, 2004). Furthermore, patients might lose their jobs and livelihood. While sick and isolated, patients lose the hope of recovery.

Additionally, post quarantine, integration back into the community often invoke challenges. Members of the community may shun not only the victim, but also the victim's family, by acts such as refusing to let individuals into markets. Because of this harsh response from the community, individuals who are infected may try to hide their symptoms rather than seeking medical attention. Those affected by other medical concerns, such as cholera and malaria, may also hesitate to receive medical attention, as their symptoms are similar to those of Ebola and they fear being ostracized by the community (IFRC, 2014). Stigmatization from community also presents a harsh circumstance, as Sierra Leone, Guinea, and Liberia are all countries that have experienced violence, displacement, and country conflict. Therefore, while recovery and healing from psychological symptoms related to violence and displacement may still be present for some, rejection from society can result in a drawback and uncover distress.

A study by Omidian, Tehoungue, and Monger (2014) on psychosocial support in Liberia following the Ebola outbreak found that the greatest stress and emotional pain revolved around death and burials. Because communities could not carry out traditions for loss and burials, a large portion of their regular emotional healing was lost. Denial, which serves as a fear response, was also found commonly, in that some people did not believe the virus existed. This was also supported by the fact that the Liberian government initially denied the issue of Ebola when it first evolved (Omidian, Tehoungue & Monger, 2014).

Hopelessness is found significantly at community levels. As described by Chernor Bah (2014), a former Sierra Leone refugee who returned to the Pork Loko recently, 500,000 civilians in the district had been sealed off from the world and stigmatized, as if criminals, with little or no help. Many other districts similarly have been held under quarantine with approximately a third of the nation unable to move freely. People exhibit fear, suspicion, and desperation in a nation that has already experienced civil war and displacement. With lockdowns, there is a parallel that people have also shut down [emotionally].

For children, many have lost one or both parents to Ebola and have been subjected to seeing family members taken away "by people effectively in astronaut suits looking like crop sprayers. And the affect of this is deeply distressing for children. Children who have been exposed to the virus

are facing deep stigma and nobody wants to take them on because there is this terribly psychosis of fear around the Ebola virus" (Schlein, 2014). Another major result of the crisis has been the closing down of schools to lessen the chances of contact; however, it is questionable whether children are in fact better off at home, where there is very little food, almost no mental stimulation, and decreased safety. While most humanitarian crises keep children in schools, where they can receive care from adults, have some protection against outside turmoil, and build resilience, this strategy of closing schools has presented a hindrance to recovery. More children will be subject to illiteracy, which is already high in some areas, which raises the question: How can public health messages on safety against Ebola be beneficial if they cannot be read? The government has made efforts to broadcast lesson plans over radio. However, the programs do not distinguish different grade levels, are unexciting, and the poorest families do not own radios (Schlein, 2014).

Widespread reports have shown girls have become victims of rape, as they are cooped up in homes rather than school . With a lack of sufficient health care workers in these communities, girls and women who are subjected to sexual violence cannot reach medical treatment. In addition, females have higher chances of contracting the virus, as they are likely to be pressed into taking care of sick family members with Ebola. It is also noticed that nurses and those involved in burial processes are mainly female (IASC, 2014), which has the potential to increase psychosocial distress, as does having constant, direct contact with patients and deceased victims.

Mental health and psychosocial response

Local health care systems in West Africa have been ill-equipped to manage such an outbreak. While international NGOs have sent humanitarian response teams to help manage the crisis, challenges are presented with cultural considerations. Psychological First Aid (PFA) has been implemented in communities hit by the Ebola crisis. "PFA describes a humane, supportive response to someone who is suffering and may need support" (World Health Organization, CBM, World Vision International & UNICEF, 2014). It involves providing non-intrusive care and support, evaluating needs, assisting people to access basic needs such as food and water, listening, comforting and encouraging a sense of calm, helping connect the community to information, services, and social support, and protecting the community against further harm. PFA can be beneficial to anyone impacted by the crisis, such as Ebola victims, health care providers, community members, and people fearing they have Ebola even if told they do not. PFA is based on a pyramid of intervention, in which a small number of people (about 7-10%) fall into the category of needing specialized mental health services, as many are able to cope (World Health Organization, CBM, World Vision International & UNICEF, 2014). The purpose of PFA is to facilitate resilience through a wellness approach without relying on specialized care (Omidian, Tehoungue, & Monger, 2014); as such, non-professionals can implement the services.

A challenge for implementing PFA in areas of West Africa has been the cultural factors for which these services

Figure 2. World Health Organization, CBM, World Vision International & UNICEF, 2014

need to be adapted. Distributing information has been particularly vital, as many rumors, misconceptions, and misinformation about Ebola and how it's prevented have spread in communities. Common rumors and beliefs include: Ebola is caused by witchcraft or a snake biting those for revenge, international NGO workers have brought the disease to communities as a way of spraying, white men have brought the disease to get money from institutions or for the purpose of collecting organs for science, and the dead victims of Ebola are beheaded, which is why relatives cannot see the bodies (IFRC, 2014). Active agencies have trained volunteers to provide information and sensitization campaigns, identify and track suspected cases, disinfect homes of patients, and raise awareness on how to protect against infection. However, communities have been hesitant to listen to awareness campaigns, which has caused challenges for ensuring they receive accurate information. In addition, communication barriers, illiteracy, and those living in remote areas may be seen as additional difficulties in addressing public health education (IFRC, 2014).

On an individual level, psychosocial support programs that include psychological counseling have been assisting recovered patients in regaining their lives. The waiting period for test results can bring on psychological stress. To cope during this waiting period, individuals are encouraged to set goals, keep active, look for humor, exercise, maintain hope by believing in something meaningful (such as family, God, or an ideal), and to utilize stress management techniques (IFRC, 2014). While a number of resources are available for managing psychosocial support in humanitarian crises, adaptation to cultural considerations is essential, and the Ebola crisis presents this clearly.

For women and girls, it is suggested that community groups provide meaningful support to survivors of sexual violence and emerging issues. Women may also benefit from

the creation of new economic opportunities, which can empower and strengthen their mental wellness (IRC, 2014). The Inter-Agency Standing Committee (2014) recommends that social mobilization and community engagement efforts be developed by women and young females, and that women are equally represented in recovery and coordination activities (IASC, 2014). These types of actions could provide a source of empowerment and resilience for females who are especially vulnerable in this crisis.

Mental health considerations for responders and health care workers

TIME honored Ebola fighters as "person of the year" (2014), recognizing the courageous efforts of local and international doctors, nurses, health care workers, ambulance drivers, and volunteers, who decided to attend to this dangerous work. In addition to the threat to their own health and of contracting the highly contagious disease, which many did, these individuals also faced resistance, and at times, hostile reactions from communities who were skeptical about Ebola. They also witnessed constant deaths of patients, especially those on burial teams, while struggling to maintain hope about the epidemic.

As described by psychologist Dr. Theresa Jones, who went to Liberia to help, the physical challenges of this crisis held distress for health care workers. At one point, a health care facility in Liberia had to turn people away, as the Ebola center simply did not have enough space; "to have to turn people, who are often unwell and desperate, away from the treatment center is terrible" (VICE). Psychosocial groups and workshops on well-being are particularly important for health care workers, especially since many have been evicted from their homes and rejected by their communities as a result of working with the Ebola crisis. Jones (2014) states that for medics, small acts of kindness can by very meaningful in a situation that seems hopeless. "Shaking hands is of huge importance in Liberia. Friendships are formed between the doctors and patients, and when a patient whom they got on with particularly well is discharged, you see the medical staff running over to shake their hand. It really creates a wave of positive feelings when you see this" (Jones & Nianias, 2014).

International volunteers and responders also face fear and stigma after returning home from missions. As seen in events across the U.S., the widespread panic of communities has taken a harsh toll on individuals completely removed from the Ebola situation but perceived to be threats. Ebola has certainly shaken up the world. While mental health and psychosocial responses are continuing to address patients, communities, and health care workers, hope remains one of the strongest facets of recovery from this crisis.

Internationalizing Psychology: The Importance of Student Research

Yulia Kamenskova
Pace University, *New York*
yulia.kamenskova@gmail.com

Richard Velayo, Ph.D.
Pace University, *New York*
rvelayo@pace.edu

"To internationalize the teaching of psychology, how can we involve more students in cross-cultural research?" This question was the focus of a forum offered at the 26th Greater New York Conference on Behavioral Research on November 9, 2014.

This forum was chaired by Professor **Richard Velayo** (rvelayo@pace.edu), who is the Director of the Masters Psychology Programs at Pace University, his graduate assistant **Sarika Persaud** (ap75294n@pace.edu), and five members of Dr. Velayo's student research team called the IToP (Internationalizing Teaching of Psychology) team, with diverse messages.

The three major goals of the IToP team are to (a) identify effective pedagogical strategies to internationalize psychology courses, (b) develop assessment tools for an internationalized psychology course, and (c) apply Internet-based technologies (IBTs) as teaching and research tools to help infuse international content. Dr. Velayo noted, currently the internationalization strategies, and initiatives are mainly coming from major international organizations, but it is also important to involve students in this work. In Dr.Velayo's mentor laboratory, student researchers came up with topics of their own interest, and proposed research project carefully mentored by the professor.

Lucio Forti (lf72881n@pace.edu) presented his research proposal on *"Internet-Based Technologies in an Internationalized Classroom."*He explored the usage of technology to infuse international content, the types of IBT strategies that instructors used to incorporate international perspectives, and the challenges and benefits associated with these strategies. Some possible tools in an instructor's digital toolbox are: Face-to-Face, Social Media, Learning Management Systems (BB, WebCT; Moodle), Online Collaboration (wiki-based), and Digital Narratives (Prezi, YouTube, Blogs).

Lauren Lambert (ll97492n@pace.edu) researched *"Social Media and Culture: Factors that Influence Classroom Learning*." She sought to figure out how technology negatively and positively impacted learning in the classroom, mainly looking into the possible usage of a Facebook group to enhance learning in the classroom for a semester.

Yuting Dai (yd65442n@pace.edu) decided to look into the "*Current Status of Psychology Programs in China*." As an international student from China, she would like to learn about what advantages and disadvantages the psychology curriculum in her home country have in meeting the public needs of mental health service.

Matilda Koroma (mk53787n@pace.edu) talked about "*Culturally-sensitive Teaching Strategies for Third Culture Adolescents* (TCAs)". She explained to the audience, the Third Culture Adolescents are those who were raised in a culture outside of their parents' culture for a significant part of their development years, so that basically there 1st culture is where their parents are from, their 2nd culture is the current one in which they were raised up, and the 3rd culture would be the mixture of the first two. Matilda Koroma was specifically interested in the ways in which we could develop culturally-sensitive teaching strategies which catered to the unique cognitive and developmental needs of TCAs.

Michael Trush's proposed research examines the "*Interaction between Learning Strategy, Modality Presentation, and Cultural Background on Memory*." His hypothesis was that cultural background would significantly moderate learning as a function of modality presentation and type of learning strategy.

Students' projects provoked a lively audience discussion--particularly on the pros and cons of using IBT in teaching, including social media platforms. Though face-to-face communication is still the most effective type of communication, the development of the IBT has enabled instructors and students to do many activities distantly, along with internationalizing and expending the "classroom" experience.

In regards to the development of psychology in China, it was pointed out that many psychological issues were neglected in China in earlier days, and even now psychology has not drawn a proper attention to itself. Many psychological issues carry a lot of stigma in the society and are not spoken of. Moreover, the number of universities offering psychology programs is quite limited, and if they do, they offer only 2 types of psychology programs: general psychology and applied psychology. Even though the situation is gradually changing the progress is slower than expected.

Due to the aforementioned reasons, there exists a huge gap in terms of the small ratio of trained psychologists to the vast population of China. Thus, there is a greater need for internationalizing teaching of psychology, and making it

more accessible for different people all around the world.

Furthermore, the discussion of incorporating the perspectives of Third Culture Adolescents raised the question about the sense of "being everywhere and nowhere," causing possible issues with personal identity, which should be taken into consideration when developing culturally-sensitive teaching strategies.

Dr. Velayo summarized the value of involving students in the process of internationalizing the teaching of psychology. Despite all the differences between people from various cultures, we should not overlook the commonalities. There is way more out there that makes us similar to each other, than what makes us different. Those commonalities

Speakers (l to r): Matilda Koroma, Lauren Lambert, Yuting Dai, Richard Velayo, Ph.D., Sarika Persaud, and Lucio Forti.

might also help us to achieve the goal of internationalizing psychology teaching and developing corresponding strategies to do so.

For more information about this presentation and of the IToP team, please contact Dr. Richard Velayo at rvelayo@pace.edu.

How Many Psychologists Are There in the World?

Maryam Zoma
Hunter College, CUNY
zomamayam@gmail.com

Uwe P. Gielen
St. Francis College
ugielen@hotmail.com

"How many psychologists are in the world today?" The answer to this simple question is as elusive as the question itself is common. This brief report reviews: (a) the problems faced when attempting to answer this question, (b) reasons why this answer is so elusive, and (c) sources of information on cross-national psychology today.

In the United States, there is a plethora of data by a variety of sources tracking and updating the number of psychologists, psychology undergraduate and graduate students, professors, and members of professional psychological associations in the country. This information can be found in the US labor statistics data (Bureau of Labor Statistics, 2014), university data on the number of students in their psychology programs, on the American Psychological Association (2014) website, and elsewhere. (See Figure 1). There might be some variations in these numbers, due to the varying criteria on who is considered a psychologist, and differences in each state on educational and professional requirements for state licensing exams.

However, do these statistics exist for countries outside of the United States? Are there any data sets showing the number of psychologists or psychology students in Europe, South America, Africa, the Middle East, and Asia? Although this question appears to be quite straightforward, the answer to this question is actually quite elusive (Bullock, 2012a). Even if such a dataset did exist, it might not be able to

Figure 1. Trends in U.S. psychology bachelor's, master's, and doctorates awarded, new Psi Chi memberships, and high school AP psychology examinations, 1950-2009. (Adapted from Takooshian & Landi, 2011).

provide much detail about the educational qualifications required to be considered a psychologist in these countries, and what are the requirements to join a country's psychological association. In addition, it is likely the statistics might under- or over-represent the number of psychologists. Although there are psychologists who are involved in conducting research, teaching, and practicing worldwide, the definition of a psychologist may vary in different countries. These definitions may not be consistent with the United States's definition of a psychologist or psychology student, thus making comparisons between countries incredibly difficult or impossible (Bullock, 2012b, 2013).

Though it was difficult to find definitive data on the number of psychologists in the world, there exist some valuable resources that can provide information about the criteria for being considered a psychologist in a country or region.

Who is a Psychologist?

The definition of a psychologist varies from country to country. Developing nations or countries where psychology is a fairly new field may be at different stages of professionalization. Although these countries may have data on the number of psychologists in their respective countries, this number may include people who are psychiatrists or other mental health practitioners. Countries may not distinguish between these varying professions, thus inflating the number of psychologists recorded. International bachelor's, master's, and doctoral psychology programs may offer different courses and trainings than US programs, again making it difficult to compare these numbers. In addition, countries and universities may offer certificates or short-term training programs in psychology and may count these individuals as students or psychologists. Some individuals may have the title of psychologist at their place of employment, without obtaining an education in psychology or providing psychological services. In many countries, an individual with a bachelor's degree in psychology may be considered a psychologist.

For example, in some countries, such as Egypt, individuals may be providing psychological services without much training or education, and traditional healers, social workers, or sociologists might be administering these services (Ahmed, 2004). Moreover, in the Middle East some individuals might be working as school psychologists with a bachelor's degree in counseling and education and providing counseling services, or education and tutorial services. Although they may have the title of school psychologist at their place of employment and may be counted as a psychologist in the country or regional dataset, they may not be providing any psychological services or working in the capacity of a psychologist.

Some inconsistencies also include conflicting information from different data sets. For example, the maps below created with data on psychologists and European Federation of Psychologists' Associations (EFPA) members from Lunt, Pieró, Poortinga, and Roe (2015) show that Turkey has 1,300 psychologists; however Jimerson, Stewart, Skokut, Cardenas, and Malone's (2009) article on school psychology indicates that there are 11,327 school psychologists in Turkey.

Map 1
Estimated Number of Psychologists in Europe per Country

Map 2
Number of Members in EFPA Member Associations per Country

Useful Resources

Even though data may not be consistent or inflated, there are some useful resources available providing estimates on the number of psychologists worldwide. These resources include:

- **The World Heath Organization (WHO) Mental Health Atlas**: In 2001, 2005, and 2011, the WHO collected information on mental health resources in 184 countries, covering 98 percent of the world's population. Each country profile has information on the number of mental health facilities, psychologists, psychiatrists, social workers, and people treated in mental health facilities.
- http://www.who.int/mental_health/evidence/atlasmnh/en

- **Professional Psychological Associations**: Some professional psychological associations keep a record of their members and psychologists in their country or region.
- http://www.socialpsychology.org/inter.htm
- http://www.efpa.eu
- http://www.efpsa.org
- http://www.iupsys.net/about/members/national-members/index.html

It is important to realize that national membership organizations may include or represent quite varied proportions of the psychologists practicing or being active in the respective countries. Two highly divergent examples found on the website of the International Union of Psychological Science (IUPsyS) may illustrate this point. On one hand, The British Psychological Society (BPS) is said to represent "over 42,000 psychologists, and over 7,300 students and affiliates" (IUPsyS, 2013a). Clearly, the number of 42,000 suggests that BPS does, in fact, represent most active psychologists in the United Kingdom. For Argentina, however, the website lists as the "Adhering Member" Association the Argentinian Association of Behavioral Science/Asociación Argentina de Ciencias del Comportamiento (AACC), with 213 members (IUPsyS, 2013b). Yet, there are probably more than 40,000 psychologists active in Argentina, with the large majority of them endorsing a variety of psychoanalytic traditions (e.g., those founded respectively by Freud and Lacan). One wonders in this context how a small, behaviorally oriented organization can be said to represent Argentinian psychology in IUPsyS.

Recommendations and Further Research

Additional research needs to be conducted with universities, professional psychological associations, and country labor departments to obtain reliable data and cross-reference information on the number of psychologists worldwide. If further research is to be done on this topic, researchers must be very clear about the data they want to collect and create consistent guidelines as to who is counted or considered a psychologist. In addition, researchers conducting this work may want to consider the following questions when developing their research and data collection strategies and measurement tools:

- What does psychology mean in a cross-cultural context?
- Should individuals who provide clinical services and work as a psychologist, but do not have the training or educational background, not be considered a psychologist?
- If a local community recognizes an individual as a psychologist, should the international community also recognize them as a psychologist?

Publications such as the *Handbook of International Psychology* (Stevens & Wedding, 2004), *Psychology & Developing Societies*, *International Perspectives in Psychology: Research, Practice, Consultation*, and *International Journal of Psychology*, can provide useful information, data, and background on the aforementioned questions.

Another way to help gain more consistent data from countries is to possibly work with them in standardizing and professionalizing the field in their country, especially if psychology is a fairly new field, while also recognizing the local context and meaning of psychology in these countries. This work could be done with universities with a focus on curriculum development, conducting needs assessments, and starting local Psi Chi chapters.

Conclusion

During the last few decades, the discipline of psychology has grown at a rapid pace in many parts of the world. Even though in the immediate post-World War II era psychology had its center in the United States, by the end of the 20th century psychology had become a very popular discipline in Europe, Latin America, Australia, and increasingly also in some parts of Asia and the Middle East. Today, colleges and universities around the world offer more than 4,000 psychology programs.

Despite this, we do not have a clear picture of how many psychologists there are. Recent estimates by Merry Bullock (personal communication, October 3, 2014) and Stevens and Gielen (2007) indicate that the worldwide number of psychologists has probably surpassed one million. But for reasons delineated in this article, these estimates are no more than crude approximations depending not only on variable and at times missing local estimates, but also on varying definitions of who should or could be called a "psychologist." We hope that as international psychology organizations gain in scope, vitality, and rigor, a more precise and inclusive picture of the worldwide status of psychology and psychologists will emerge.

The United Nations Association: Helping students at the UN

Isis V. Quijada
Quijada@business-humanrights.org

How can students get more involved in international activities at the United Nations? This can be quite a challenge. Students can greatly benefit from UN activities (Martinez, 2014), but often do not know where to start (Roberts, 2014), and the number of seats are typically limited for U.N. internships and other programs (Takooshian & Campano, 2008).

The brief report reviews a valuable but little-known resource for students: the network of United Nations Associations (UNAs) that support UN activities--their origins, purpose, and how students especially can benefit from joining the UNA.

The United Nations Association of the United States is a program of the United Nations Foundation. UNA works unflaggingly to support the mission of the United Nations by connecting and keeping Americans informed of the work of the United Nations, and advocating for strong US leadership within the UN. The UNA-USA grew from the American Association of the United Nations, which originated from the League of Nations Association in 1943. This organization was established by a group of prominent citizens, which included the first executive director, Clark M. Eichelberger, who sought to promote acceptance of the Dumbarton Oaks proposals in the late years of the World War II. One of the first Association's early actions was a national tour by a number of US representatives to spread the word and gain support for American adherence to the Dumbarton proposals, which would later lead to the creation of the UN.

For 70 years, UNA-USA has worked to accomplish its mission through its national network of UNA chapters, youth engagement, advocacy efforts, education programs, and public events. The New York chapter (UNA-NY) - one of the many nation-wide UNA-USA Chapters - similarly seeks to educate and galvanize New Yorkers to support the principles and pivotal work of the United Nations. Though becoming involved United Nations activities can be quite a challenge, the UNA is one of the best ways to do this.

Joining the UNA-USA is very easy. If you are a student, this is free. If you feel passionate about human rights, international affairs, complex social and political issues, and are interested in informing and working together with your community to bettering these issues, this is the perfect way of getting involved. As an active member of the UNA-USA, you commit to stimulate international cooperation and community education on international affairs. UNA-USA members and their chapters work with their local communities and elected officials to support the UN. For members, there are monthly events that you can attend at no cost. For example, the New York Chapter offers a stimulating selection of events and activities suited to the interest range of its lively constituency. Some of these events include:

The Ambassador Series. A favorite- the UNA-NY ambassador series presents well-attended programs in partnership with the Columbia Club of New York. Several ambassadors are hosted every years, and are invited to discuss current events and relevant issues from their past experiences and the background of their respective regions. There is a reception where you get the opportunity to network with all the invitees and in turn let them know about your concerns, work and interests.

Screening the issues. The UNA-NY provides a series of films and discussion events that are designed to promote the work of the United Nations in an engaging way. Featured are recently produced films which address some

of the many crucial issues which concern the United Nations, made by enthusiastic, passionate filmmakers who are invited to each screening to involve and motivate an ethically aware New York audience in discussing the issues illustrated in the films.

BookTalkUNA. One of the newest, this bright new compliment to the screening presentations, features books and their authors, whose work is in-depth, politically and ethically engaged, and often quite controversial. These writers and thinkers illuminate many complex social and political realities that challenge assumptions, while offering inspiration, ideas and understanding. This can create possibilities for a better world. These book talks are quite useful since they complement the far-reaching work of the United Nations and are suitable for those who enjoy reading.

One of the best things about being a member and attending these events is that students are reminded of the ability and power that they have to seek change and better the world. Students also have the ability to advocate and inform others of the issues they learn about. By becoming a UNA member, students are able to join a chapter or create their own chapter. Once a student is a chapter leader, s/he can advocate for a strong United Nations in their local community or school.

To become a member, you can join here. Membership in the United Nations Association of the USA is open to any U.S. citizen or resident who is committed to the purposes of the United Nations Association of the USA. If you are a student 25 years or younger you can join the USA-UNA for FREE. You can also gift someone interested in being in UNA -USA.

Since only a tiny fraction of U.S. students are aware of the UNA, the UNA is almost a "secret"--but such an invaluable secret for those who want to be involved in the UN. Every student should join, if interested in the United Nations and the pressing issues that face us every day in our troubled world. Not only do you learn, become inspired and network, but you also are a step closer of making a change.

Caribbean Regional Conference of Psychology Meets in Suriname

Grant Rich
optimalex@aol.com

Judith L. Gibbons
gibbonsjl@slu.edu

Donna-Maria B. Maynard
donnamaria.maynard@icloud.com

Did you know that there are 26,000 psychologists in the Caribbean and that half of those are in Cuba? Did you know that Barbados has the highest rate of publications per capita among psychologists in the Caribbean? These are just a few of the facts that were revealed in a recent conference.

This November psychologists from around the Caribbean and the world met in Paramaribo, Suriname for the second Caribbean Regional Conference of Psychology (CRCP2014) under the theme of "Caribbean Psychology: Unmasking the Past and Claiming Our Future."

SVPO members: Fourth from right, LOC Chair Maja Heijmans-Goedschalk

The event was sponsored by the Caribbean Alliance of National Psychological Associations (CANPA) and hosted by the Suriname Association of Psychologists and Special Educators (SVPO). CRCP2014 follows the landmark first Caribbean Regional Conference of Psychology held in the Bahamas in 2011, where the Nassau declaration was signed by many Caribbean countries to agree in principle to establish a Caribbean Psychology Organization to promote the development of psychology as a science and practice. Subsequently, CANPA was launched in Grenada on June 5, 2013.

Ava Thompson, CANPA President Pro Tem, and Guerda Nicolas, CANPA Vice-President Pro Tem, seemed to be everywhere at the conference, as did CRCP2014 Conference co-chairs Donna-Maria Maynard and Keith Lequay, as well as the Surinamese local organizing chair Maja Heijmans-Goedschalk. They are all to be commended for working diligently and going above and beyond the call of duty to assemble this truly extraordinary event.

CRCP2014 Co-Chairs Donna-Maria Maynard and Keith Lequay

CANPA members began their CRCP2014 week with a one-day capacity building pre-conference workshop, which was followed by a community symposium on non-communicable diseases for Suriname's health, social services and education providers. CRCP2014 participants had a number of half-day workshops on Behavior Change Interventions, Education and Training, and Mastering the Research and Publication Processes, held at the Anton de Kom University and which were well attended.

The Surinamese Minister of Health, Dr. M. Blokland, opened the conference; and among the guests in attendance were the Chair of the National Assembly, Dr. J. Simons, and the heads of the International Union of Psychological Sciences, the European Federation of Psychologists' Associations, and the International Association of Applied Psychology, the past-president of the Association of Black Psychologists, and the president-elect of the American Psychological Association.

Several major awards were presented at CRCP 2014. The Pioneer awards--given to psychologists in the host country who have been fundamental and formidable in developing, promoting, and sustaining psychology in the country--were given to Lillian Ferrier, Tobi Graafsma, and Hank E. Essed. Educated at the University of Leiden in the Netherlands, Ferrier has 37 years of professional experience and is the current chair of the presidential taskforce for young children and adolescents. Her work in Suriname has focused on many topics, including early child development, malnutrition, sexual abuse, domestic violence, HIV policy development, and domestic violence. Educated at Groningen University and the Psychoanalytic Institute in Amsterdam in the Netherlands, Graafsma has 43 years of professional experience and is currently Bascule Chair at the Institute for Graduate Studies and Research at Anton de Kom University in Suriname. He has played a leading role in research in Suriname on suicide prevention and on prevention of violence against children. Educated at the University of Utrecht in the Netherlands, Essed has 39 years of professional experience and is currently a psychologist working in the Suriname prison system. Essed played a central role in creating the SVPO, and has also worked as a lecturer at the Anton de Kom University of Suriname and with the Roman Catholic Church in a program for people living in Suriname's interior regions. Kudos to all!

From left to right: Hank E. Essed, Lillian Ferrier, and Tobi Graafsma with their Pioneer awards.

Invited speakers included Yovanska Duarté-Vélez on suicidality among Latino/a adolescents from Puerto Rico to the mainland USA, Janel Gauthier (President of the International Association of Applied Psychology) on using the universal declaration of ethical principles to promote just and ethical policies in the Caribbean, Robert Roe (President of the European Federation of Psychologists' Associations) on diversity and collaboration in psychology, Danny Wedding (American University of Antigua) on movies and mental illness, and anthropologist Angela Roe (Curaçao), who presented her excellent debut film *Sombra di Koló* (Shadow of Color), which examined issues of race and color through interviews of 30 Curaçaoans of different ages, genders, and classes from five different neighborhoods.

Saths Cooper, President of IUPsyS, offered an inspiring plenary lecture entitled, "Critical Issues Psychologists Must Confront." Peter Weller (University of the West Indies) and Guillermo Bernal (University of Puerto Rico) offered an invaluable session on Caribbean Psychology Education and Training. Weller's presentation "Whither Caribbean Clinical Psychology?" helped situate the issue relative to the colonial heritage of the region and the post-colonial present and future. Bernal offered a thoughtful and data rich analysis of "Indigenization of Psychology in the Caribbean: Progress and Status in Scholarship, Research, and Education," with some helpful statistics on numbers of psychologists in the region, and the relevance of impact factors for Caribbean scholars. Omowale Amuleru-Marshall offered a powerful plenary on health psychology, demonstrating a point of view rooted in a psychology aimed to empower and to enhance well-being across the region. Other plenaries included Gloria Wekker on relations between Afro-Surinamese mothers and their children and Gail Ferguson (University of Illinois at Urbana Champaign) on "Remote Acculturation and the Birth of a New Bicultural Caribbean Youth Identity."

Saths Cooper Introduction

CRCP 2014 opened with keynote sessions by Barbados based attorney-at-law and political activist David Commissiong, a Pan-Africanist who covered the Reparations Movement, and Professor Marcia Sutherland, a Jamaican born psychologist at SUNY, Albany, USA, who spoke on a Pan-Caribbean Psychology as a tool for regional development.

A number of Division 52 members presented at CRCP 2014. Judith Gibbons and Merry Bullock presented on publication opportunities. Danny Wedding offered an excellent presentation on the portrayal of psychopathology in contemporary cinema. Grant Rich and his colleagues (Lynn McCutcheon, USA, Maria Wong, USA, Joan Black, Jamaica, Donna-Maria Maynard, Barbados and Rosemary Frey, New Zealand) presented their cross-national analysis of the relationship between celebrity attitudes and sensation seeking. Frank Worrell and his colleagues presented on school psychology in Trinidad and Tobago.

A sampling of other valuable presentations must include Olivia Edgecombe-Howell's comprehensive presentation on Fetal Alcohol Syndrome in small, vulnerable developing Caribbean countries. She is clearly a go to person on this critical issue. A Thursday afternoon session on youth and children offered a veritable plethora of insights, with presentations on mental health professionals' experiences counseling young sexual abuse survivors in the Cayman Islands, the high prevalence of child maltreatment in Suriname, and neuropsychological performance of former street children in Ecuador. There were also a number of interesting paper presentations, symposiums, roundtable discussions, and poster sessions.

Given that the conference was so stimulating, few had the time or inclination to experience Suriname more broadly while sessions were being offered. That said, some participants did have the opportunity before or after the conference to take a city tour or visit the vast interior of this nation, where they were treated to Suriname's many attractions, from food, dance, and music, to such wonders as the inner city of Paramaribo, a UNESCO World Heritage Site, Fort Zeelandia, the 19th century Roman Catholic St. Peter and Paul Cathedral, one of the largest wooden structures in the Americas, and a mosque right next to a synagogue, emblematic of the unity that comes from Suriname's diversity. Those unable to leave the conference were treated to a special evening cultural event, featuring impressive drumming and dancing from many of Suriname's cultural groups. Seventeen types of percussion instruments performed, with accompanying traditional dances. Suriname, a former Dutch colony, became independent in 1975. Located in South America, where it is bordered by French Guiana, Guyana, Brazil, and the Atlantic Ocean, its heritages, and CARICOM membership, situate it in many ways, in the Caribbean both historically and in terms of contemporary politics. While its official language remains Dutch, a number of other languages are spoken including Sranantongo creole, Hindi, and Javanese, and the population of just under 600,000 is richly diverse (East Indian, Maroon, Afro-Creole, Javanese, Amerindian, Chinese, Mixed).

Cultural Evening at CRCP

Currently, CANPA has 13 national members (the Bahamas, Barbados, Cuba, Haiti, Dominican Republic, Puerto Rico, U.S. Virgin Islands, Trinidad and Tobago, Jamaica, Guyana, Grenada, Suriname, and Martinique). One would not be surprised if the enthusiasm and expertise stimulated by the recent Suriname CRCP leads more member nations to join in time for the next Caribbean Regional Conference of Psychology – CRCP2016, which is scheduled for November 7 to 11, 2016 in Haiti.

The theme of CRCP 2014, Unmasking the Past and Claiming our Future, was consistently addressed throughout the conference. While many scholars have recognized that most of psychology is limited by its WEIRD emphasis, the organizers and presenters at CRCP moved well beyond that recognition. Speakers made strides towards identifying the nature of an emerging Caribbean psychology. In a workshop Ava Thompson outlined the process for indigenizing a curriculum. In a plenary session Guillermo Bernal provided a path for developing "a creole or autochthonous psychology through the process of indigenization in the Caribbean." Lillian Ferrier chaired a panel on the factors that make our children vulnerable. Posters presented by students and young scholars maintained the theme. Ayodele Harper of the University of the West Indies and co-authors described some uniquely Caribbean aspects of the grieving process.

Most notable about the CRCP 2014 conference were the warm and welcoming atmosphere, the enthusiasm of the attendees, stimulating discussions, and the positive contributions to knowledge. For those who missed this wonderful opportunity, you can view the program at http://canpanet.org/index.php/crcp2014-programme.

Regina V. Ershova,
Moscow Regional State Institute (MGOSCI)

On December 9-11, 2014, the ancient city of Kolomna was the site for the international conference on "Obedience to Authority." The conference produced a 284 -page English-Russian volume, collecting 16 chapters by 25 Milgram scholars in four nations: Russia, USA, UK, France. More details on this conference appear at www.milgram.ru/en

PRESIDENT'S COLUMN

Tara Pir, Ph.D.

President, USA

As we approach the transitional bridge from one year to the next, there is a time for reflection on our experience and collective wisdom of insight. That process of reflection must certainly include celebrating our successes and accomplishments. One of those successes was the outstanding ICP conference that was held in Paris, in conjunction with the 28th International Congress of Applied Psychology. Our conference provided an opportunity to reach out to professionals from around the world to share knowledge, to collaborate, and promote our collective wisdom.

Throughout my presidency, I have presented initiatives and motions aimed at supporting and expanding our organization's ability to achieve its mission and goals, as well as its sustainability. Our gathering in Paris also provided the opportunity for our Board to consider and discuss a number of these.

One of these motions was my proposal to restructure our membership and provide one universal membership fee to encourage more individuals in our profession and allied professions to join ICP. At a time when many professionals are already members of one or more organizations, the proposed fee would make becoming an ICP member more accessible for a greater number of professionals globally.

Also, with the aim of expanding on the principle of inclusion by design, I proposed to have at least five different regional centers, one in each continent, and have each region promote our mission locally in their network and provide regional conferences in addition to our annual ICP

ICP 2015 ELECTIONS
CALL FOR NOMINATIONS
for
PRESIDENT ELECT, TREASURER and
TWO (2) DIRECTORS AT LARGE
N & E Committee:
Ludwig Lowenstein, Chair
Members: Naty Dayan, Dennis Trent, Chik Hiew, Anna Laura Comunian, Ann M. O'Roark

PAST PRESIDENT REPORT

Ludwig F. Lowenstein, Ph.D.
U.K.

SEASONAL GREETINGS

The report from the Past President is rather short as nothing much has occurred in ICP upon which to comment. There have been few nominations for office made to me over the past months but I am hoping that if there are more nominations you will contact me soon. I take this opportunity to call for nominations for future ICP Board Members.

(See the blue box above!)

[continued on next page]

PRESIDENT, from page 1

conference. However, our Board meeting would continue to be held in conjunction with APA's timeline to support Board Members' availability for participation at this time. This is aimed to decentralize and promote more local engagement and involvement with our fellow professionals around the world. As you can tell, all of these motions are aligned with ICP's mission "to foster international professional development, networking, communication, mentor, and friendship among psychologists and allied mental health professionals."

Although we have to do everything within the context of procedural, organizational process, I am inviting and encouraging all of you to provide your feedback to these motions that have been approved practically by everyone. I am confident that, as we continue to open the doors of inclusiveness and move forward with changes such as these, ICP's continued expansion and sustainability will be assured.

Wishing you a Happy New Year,
With warm regards,

Tara Pir, PhD

PAST PRESIDENT, from page 1

I had the opportunity of visiting New York in November and was meant to visit the United Nations where an arrangement had been made for Kathleen and I to attend. For various reasons this unfortunately did not take place and our ICP representatives were all busy with their various tasks. My apologies to my colleagues that we could not get together. I would very much like to continue with some involvement with the UN which I would term personally a "disunited nations" rather than a "united nations". I do not see any positive aspects on the horizon until great powers such as America, Russia and China begin to see things similarly and cooperate to keep peace in the world instead of taking sides.

We have recently seen a great deal of commotion regarding the torture of prisoners. I know psychologists on the whole are opposed to any form of torture or physical pressure whatsoever.

I myself feel very much like the CIA and also ex Vice President Chaney. When thousands of lives are at stake as was the case at 9/11 there may be, at times, a necessity for getting information using less ethical methods than anyone would like to impose. This is my private opinion. I still see the twin towers falling and 3,000 people dying needlessly and cruelly due to the fact that America was not alert enough at the time to obtain information which could have prevented such tragic events from occurring. I shall never forget the loss of life due to the events of 9/11 and the shock that reverberated around the world.

I have over the last couple of years been engaged in writing a number of articles including one on terrorism and how to deal with it as effectively as possible. I have noted in the research that there is no easy answer. The old saying that "you cannot make an omelette without breaking eggs" in my opinion, deals very much with how to deal with potential or real terrorists who have information which could be useful in saving thousands of live. I know for a fact that most psychologists are totally opposed to any form of pressure being imposed on prisoners, especially enhanced torture. We are a caring profession and this has resulted in us always using the soft option.

What is most tragic however, in recent days, is that now it is children who are being targeted which is of grave concern to all in the civilised world.

Unfortunately, in my view at least, and I am only one voice speaking, sometimes one has to be extremely hard on a few to save many, many lives. Failing to do so is a dereliction in the duty to save the most lives.

I realise by saying what I have said I am leaving myself open to considerable criticism from other members of my profession. The world is currently in such turmoil and suffering that we need to work hard as professionals to adjust this situation with good will, cooperation and working together for a better end.

As I come towards the end of my term as Past President I wish all ICP members the best of good fortune in the future, and may our tribe increase, especially with young psychologists joining us. We older psychologists will have to hold the fort until we have achieved that end.

It only remains for me to wish you all a very Merry Christmas and Happy New Year and Peace and Good Will to all men.

Your Past President,

Ludwig Lowenstein

NEXT IP DEADLINE is March 15, 2015. All submissions should be sent to Managing Editor Ann O'Roark, at annoroark@bellsouth.net by that date..

PRESIDENT ELECT REPORT

Janet Sigal, Ph.D
USA

December 22, 2014

As ICP President-Elect, and the Coordinating Chair, I am working with closely with the ICP Conference Co-Chairs, Ann Marie O'Roark and Florence Denmark to organize the International Council of Psychologists 73rd Annual Meeting on August 1, 2, and 3 in Toronto, Canada. The Theme of the Meeting will be: PSYCHOLOGICAL CONTRIBUTIONS TO SOLVING GLOBAL PROBLEMS IN THE 21st CENTURY.

We plan to organize the ICP conference prior to the APA Convention which begins on Thursday August 5, 2014. Other satellite meetings are being scheduled on August 4th and 5th.

At present, we are contacting hotels to secure a venue for our August meeting. Once the venue is secured, we will send out a CALL for submissions for the meeting. The CALL will be sent out in January. A Scientific Review Committee will be established to review the submissions. Students will also be encouraged to submit posters for the Meeting.

We are also in the process of establishing a local arrangements committee for the meeting.

At this time I wish all ICP members and their families a wonderful holiday and a Happy New Year. Thank you for your support for ICP.

Janet Sigal

DIRECTOR AT LARGE REPORT

Yoshiko Kato, Ph.D
JAPAN

Thank you ICP Inc. !

This summer I visited Graz University and Goethe University with my students. I organized this study tour to present our research on metabolic syndrome and life satisfaction in Japan and to encourage cross-cultural research collaboration on well-being. We presented our findings to Austrian and German professors and students and discussed cultural and global implications of this research. This international academic exchange was very fruitful and led to new insights and possibility for future collaboration.

Recently universities have the big responsibilities to foster globalization in Japan. The study tour is evaluated as a representative successful educational program in my department. I was able to organize this study tour based on ICP network especially with Dr. Roswith Roth in Graz and Dr. Diana Boer in Frankfurt. I appreciate ICP Inc. very much for enabling such international collaborations and exchanges. I hope we will have further fruitful relationship through ICP Inc. in the future.

DIRECTOR AT LARGE REPORT

Richard Velayo, Ph.D.
USA

A "Mentored Research Team" on International Psychology:

Helping Internationalize the Student Learning Experience

Richard Velayo, Ph.D., Sarika Persaud, Lucio Forti,
Lauren Lambert, Yuting Dai
Matilda Koroma, and Michael Trush
Pace University, New York

At the New York City campus of Pace University, the Psychology Department prides itself with offering a course called "Mentored Lab class" in which students at the graduate and undergraduate levels are able to gain supervised research experience in psychology by becoming involved in faculty research work. Students have one-on-one mentored and individualized experience with faculty on active research projects, and will prepare students for future graduate work as well as their own independent study and research projects. Students also gain the opportunity to participate in weekly lab meetings and learn about broader theory and pragmatics of research through meetings with faculty members and other research assistants conducting research in psychology out of their primary area. *One such mentored lab course is through Dr. Richard Velayo's research group referred to as the Internationalizing the Teaching of Psychology (IToP) team.*

Speakers (l to r): Matilda Koroma, Lauren Lambert, Yuting Dai,

This brief paper describes a one-hour panel symposium on the current work of the IToP team which was presented at the 26th Greater New York Conference on Behavioral Research on November 9, 2014.

"To internationalize the teaching of psychology, how can we involve more students in cross-cultural or cross national research?" This question was the focus of this symposium, which was chaired by Professor ***Richard Velayo*** *(rvelayo@pace.edu) (Director of the Masters Psychology Programs at Pace University), with his graduate assistant* ***Sarika Persaud*** *(ap75294n@pace.edu) who is his graduate assistant and PsyD student in the School-Clinical Child Psychology Program). There were five members of Dr. Velayo's IToP team, each presenting their own proposed research projects as a function of their involvement in this mentored research group.*

The three major goals of the IToP team are to (a) identify effective pedagogical strategies to internationalize psychology courses, (b) develop assessment tools for an internationalized psychology course, and (c) apply Internet-based technologies (IBTs) as teaching and research tools to help infuse international content. As Dr. Velayo noted, currently the internationalization strategies and initiatives are mainly coming from major international organizations, but it is also important to involve students in this work. In this mentor lab team, student researchers came up with topics of their own interest (in relation to one or more of the team's research goals), and proposed research project mentored by the professor. Below is a brief synopsis of each student's presentation.

Lucio Forti *(lf72881n@pace.edu), MA in Psychology student, presented his research proposal on "Internet-Based Technologies in an Internationalized Classroom." He looked into the usage of technology to infuse international content,* the types of IBT strategies that instructors used to incorporate international perspectives, and what the challenges and benefits associated with these strategies were. Some possible tools in an instructor's digital toolbox are: Face-to-Face, Social Media, Learning Management Systems (e.g., Blackboard, Moodle), Online Collaboration (wiki-based), and Digital Narratives (Prezi, YouTube, Blogs).

Lauren Lambert *(ll97492n@pace.edu), MA in Psychology student, researched* "Social Media and Culture: Factors that Influence Classroom Learning." She sought to explore how technology negatively and positively impacted learning in the classroom, mainly looking into the possible usage of a Facebook group to enhance learning in the classroom for a semester.

Yuting Dai *(yd65442n@pace.edu), MA in Psychology student,* decided to look into the "Current Status of Psychology Programs in China." As an international student

 [continued on next page]

from China, she would like to learn about what advantages and disadvantages of the psychology curriculum in her home country have in meeting the public needs of mental health service. She provided information about the history and state of psychology training and education in China in contrast to the psychology education in the United States.

Matilda Koroma *(mk53787n@pace.edu), Communication Studies major,* talked about "Culturally-sensitive Teaching Strategies for Third Culture Adolescents (TCAs)". She explained to the audience, the Third Culture Adolescents are those who were raised in a culture outside of their parents' culture for a significant part of their development years, so that basically their first culture is where their parents are from, their second culture is the current one in which they were raised up, and the third culture would be the mixture of the first two. Matilda was specifically interested in the ways in which one could develop culturally-sensitive teaching strategies that cater to the unique cognitive and developmental needs of TCAs.

Michael Trush *(mt09725n@pace.edu), PsyD in School-Clinical Child Psychology student,* proposed to look into the "Interaction between Learning Strategy, Modality Presentation, and Cultural Background on Memory." His hypothesis was that cultural background would significantly moderate learning as a function of modality presentation and type of learning strategy.

Following the presentations, there was time devoted to a Q & A session. Students' projects provoked a lively audience discussion--particularly on the pros and cons of using IBTs (Internet-Based Technologies) in teaching, including social media platforms. Though face-to-face communication is still the most effective type of communication, the development of the IBTs has enabled instructors and students to do many activities distantly, along with internationalizing and expending the "classroom" experience.

As for the development of psychology in China, it was pointed out that many psychological issues were neglected in China in earlier days, but even now psychology has not drawn a proper attention to itself. Many psychological issues are still considered stigmas in the society and are not spoken of. The number of universities offering psychology programs is quite limited, and if they do, they offer only 2 types of psychology programs: general psychology and applied psychology. The situation is gradually changing, but the process is going very slow. This highlights a huge gap between the small number of psychologists for the vast population in China, proving the importance of internationalizing teaching of psychology, making it more accessible for different people all around the world.

The discussion of incorporating the perspectives of Third Culture Adolescents raised the question about the sense of "being everywhere and nowhere," causing possible issues with personal identity, which should be taken into consideration when developing culturally-sensitive teaching strategies.

Dr. Velayo summarized the value of involving students in the process of internationalizing the teaching of psychology in that despite the differences between people from various cultures, we should not overlook the commonalities among the people worldwide. He emphasized that cross-cultural and cross-national research may also emphasize how people in different cultures may similar to each other, rather than looking at their differences as the driving force of psychological inquiry. Those commonalities might also help us to achieve the goal of internationalizing psychology teaching and developing corresponding strategies to do so.

For more information about this presentation and of the IToP team, please contact Dr. Richard Velayo at *rvelayo@pace.edu*

ICP 2014 CONFERENCE WRAP UP

Dayan-O'Roark InAbsentia Poster Awards International Council of Psychologists

Paris, France, July 13-15, 2014

Anna Laura Comunian

Joshua Wright and Jason Young were the recipients of the first place award for the Dayan-O'Roark InAbsentia Poster Awards hosted at the 2014 International Council of Psychologists (ICP) conference in Paris, France past July. Joshua Wright and Jason Young's poster, *Religious Identity, Aggression, and Attitudes towards Violence: Implications for Intergroup Conflict* reported an experimental study with 150 religiously oriented persons in New York City that included Christians, Muslims, and persons of other religious affiliations.

In addition to experimentally manipulating the salience of membership in a given religious group, the authors also assessed the subjects' religious involvement, religious commitment, and perceived collective self-esteem of their religious in-group. The research results indicated that Muslims in particular responded with lower levels of anger and hostility in situations where their religious identity was salient in a situation of (perceived) threat.

Dr. Harold Takooshian of Fordham University, New York, and of Council of Representatives American Psychological Association (International Division), presented the certificates and award funds to Joshua and Jason on-behalf of all the ICP family in November.

 [continued on next page]

The second place winners of the competition were Claudia Zago and Paolo Francesco Cottone who displayed a poster entitled *Shaking Violence with Laws.* In addition, they gave a presentation about the study that they had described in their poster. The poster explored how Portuguese laws could influence representations of domestic violence after Portugal had introduced a law stating that domestic violence constitutes a crime that can be prosecuted. Their study included a review of pertinent Portuguese legislation, ethnographic research, and participant observation together with four interviews with police officers and four in-depth interviews with members of relevant Portuguese organizations.

Zago and Cottone concluded that the aforementioned changes in Portuguese law helped to empower women who had been victims of domestic violence, made people in general more aware of the nature and complexity of domestic violence together with the social networks involved, and also led to a greater awareness among the public and the victims' neighbors. The Director of the Department, Dr Egidio Robusto, and Dr Anna Laura Comunian presented the certificates and award funds to Claudia and Paolo Francesco during a ceremony organized at the Department of Psychology, University of Padua, Italy.

During the ceremony were also distributed the certificates "Dayan-O'Roark InAbsentia Poster participation ICP 2014" to the other exhibitors of posters. Their topics presented different psychological research. They were from Spain, Italy, Hong Kong, USA. The authors were the followings: *Psychological resilience at University of Seville: a comparison study between male and female students* by Sara Vera Gil, University of Seville; *Expectations of well-being and happiness at the beginning and at the end of the career path: a survey of Italian and Romanian youth and seniors* by Raluca Levonian, Eleonora Bordon& Mariselda Tessarolo, University of Padua; *A sector study on employability of women in post-modern society* by Maria Concepción Mimbrero Mallado, Ana Guil, University of Seville; *Youths think to the future: economic crisis and new definitions of self and social, by* Eleonora Bordon, Mariselda Tessarolo, Anica Lazic.University of Padua, *Tell me what different languages you speak: Perception and representation of foreign languages in university students* by Magali Boureux, Eleonora Bordon, University of Padua; *Recalling 'Thanks' for good: The effects of gratitude recall on appraisals of psychological well-being* by Bobo Hi-Po Lau & Cecilia Cheng, The University of Hong Kong; *Why are obese kids thin in mums' eyes? Transnational survey on mothers' evaluation bias while estimating their children's weight* by Alexander Hochdorn, Dario Gregori, Ileana Baldi & The Obey-Ad Study Group, University of Padua; *Goals and Strategies for "Internationalized" Psychology Course: An Online Assessment Survey* by Richard Velayo, Pace University, New York.

The Evaluation Commission for the Dayan-O'Roark InAbsentia Poster Awards included Uwe P. Gielen and Roswith Roth, both past presidents of the International Council of Psychologists.

UNITED NATIONS REPORT

UN NGO Representative
Florence L. Denmark, PhD
USA

In New York, we have the following NGO Representatives: Norma Simon, Richard Velayo, Martin Butler, Eva Sandis, Pete Walker, and Florence Denmark as the Main Representative. We are active on many committees such as Florence Denmark being co-chair and Norma Simon serving as the Corresponding Secretary of the Family Committee. On the Ageing Committee, both Norma Simon and Florence Denmark (as past chair) are on the Executive Committee. Richard Velayo and Pete Walker are also active on this committee. Eva Sandis is very active on the Migration Committee, having been a former chair. Martin Butler is also active on the Migration Committee.

Anna Laura Comunian serves on the Human Rights Committee at the UN headquarters in Geneva, and Roswith Roth is active in the UN headquarters in Vienna.

ICP Interns (from left to right): Lucio Forti, Eve Mitchell, Pancho Diaz, and Alaa Alhomaizi.

I am very proud of our interns at the United Nations: Alaa Alhomaizi, Pancho Diaz, Lucio Forti, and Eve Mitchell. They are active and involved. They were selected by Norma Simon, who coordinates the intern activities, Pete Walker, and Florence Denmark. Following is a brief biography of each intern.

Alaa Alhomaizi: Alaa Alhomaizi is pursuing a Masters degree in Clinical Psychology at Teachers College, Columbia University majoring in Global Mental Health and investigator of a study focusing on Arab women's stress, adjustment, and mental health at the Global Mental Health Lab at Teachers College. Her primary research interests are maternal and child mental health, stress and resilience, and global mental health. Alaa is originally from Kuwait. She is the co-founder of the Standing for Psychological Education and Awareness in Kuwait (SPEAK) anti-stigma campaign, the first and only campaign of its kind in Kuwait. Upon completing her masters, Alaa plans to pursue a PhD in Clinical Psychology and eventually return to Kuwait as a practicing clinician as well as an advocate for the rights of people living with mental illness in Kuwait.

Pancho Diaz: Pancho Diaz Jr. has recently graduated with a MA in Psychology from Pace University. He has been living in New York for the past four years, and has been involved with the International Council of Psychologists for the past two. Over those two years, he has participated in and helped organize various events at the United Nations, such as Psychology Day and the International Day of Older Persons. He is also active in the Family Committee, assisting with things such as website development. In the near future, he plans to continue his education in the areas of public health and quantitative research.

Lucio Forti: Lucio Forti is a Master's student in Psychology at Pace University where he is a member of Dr. Richard Velayo's IToP research team (Internationalizing the Teaching of Psychology). His background in systems engineering at a custom software developer has led him to investigate internet-based strategies that instructors use to incorporate international perspectives in the classroom. A member of the Academic Technology Department at Pace, Lucio works closely with faculty and students to design strategies that leverage technology in order to cultivate a rich learning environment. His current research interests also include the cross-cultural study of perception and affective priming.

Eve Mitchell: Eve Mitchell is a first-year Master's student in Psychology at Hunter College. As a post-baccalaureate student, her research at Hunter College focused on identity and self-structure. She began her foray into psychology as a research intern for The Family Center, working on projects that focused on the efficacy of social and educational programs offered to families around New York City. She trained for two years under a learning specialist and currently works with children ages 10-16 as a private tutor. Her interests include the ideographic structure of behavior, the relationship between self-structure and authenticity, and valid, reliable measures of the self. She has a cat whom she loves dearly, a soft spot for eastern philosophy, and very strong feelings

about 19th century art.

Interns and representatives all look forward to an active 2015.

UN reps meet in New York, Fall 2014: Pete Walker, Harold Takooshian, Florence Denmark

[*Publisher's Note: More intern notes and information in the upcoming International Understanding. NQ]*

SECTION II: INTERNATIONAL

WORLD AREA CHAIR REPORT

Dr. Sandra E. S. Neil

World Area Chair Coordinator
AUSTRALIA

In Graz Austria

International Satir Model Training

Dr Sandra E. Neil and Dr. Robert L Silverberg will present a 5 day workshop "Satir Model Family Psychology & Therapy Training Programme: Toward Healthy Families 2020" from 24th – 28th August 2015 at Institut Für Kind Jugend Und Familie Austria. This is a Satir Model Family Psychology & Therapy Training Programme:

The programme is not limited to and includes:

Systemic Transformational Change Processes
The Hierarchical vs The Seed Model for Growth
The Satir Model Towards Congruence
Three Generational Family Maps
Tools and Vehicles of Satir Therapy
The Survival Stances
The Transformation Process
The Parts Party, Ropes, Metaphors, Family Chessboard
Family Reconstruction
What Children need for Self Esteem

In Gold Coast, Australia

Australian Psychological Society

The 50th Anniversary Annual Conference of the Australian Psychological Society will be held at The Gold Coast, Queensland, Australia, 28th September -2nd October 2015. The conference Chair and team are developing an enriching program for this Golden anniversary. Website link:

Australiawide

National Psychology Week 9-15 November 2014 generated nation-wide media coverage, with an estimated 360 media pieces across print, television, online and radio outlets (including 240 radio news pieces) reporting findings from the APS Stress and Wellbeing survey, as well as APS member events, to highlight the contribution of psychology to community wellbeing.

Melbourne, Victoria, Australia

Australian Psychological Society, Victorian Section Clinical College AGM and Dinner held at The Point, Albert Park, Melbourne, November 27th 2014. Presentation by Dr Sandra Neil, Title: "Midnight Musings of a Clinical Psychologist in the World of International Psychology". Dr Neil spoke about her experiences and collaborations with international psychologists. This Presentation was a resounding success with many young PHD Students and prize winners excited by the talk, both content and style.

This talk would be very effective if presented at an ICP conference or other gathering to attract new members, especially from young professionals and graduate students.

Kuala Lumpur, Malaysia

International Family Therapy Association (IFTA) 23rd World Family Therapy Congress 10-14 March 2015 Kuala Lumpur, Malaysia

Dr. Sandra E. S. Neil, PhD, MA, BEd, BA, FAPS and Dr

Emotional Abuse A Group Therapy Method For Healing Family Abuse: Can the Leopard Change His Spots?

This group psychotherapy method for healing abuse describes types of traumatic abuse, representing: the Man, the Child, the Family, the Self, and Tools of Abuse. The group process resulted in the transformation of the emotional signature of an adult man who wishes to never repeat family patterns of abuse.

The Psyche and The Soma - A Satir-Based "Body Parts Party" for Diagnosis of a Brain Tumour

"The Psyche & the Soma" is a group therapy method assisting early diagnosis. A multidisciplinary team used the Body Parts Party indicating a combined physical-psychological pattern. After early detection in Group Therapy, a cerebello-pontine angle brain tumour was diagnosed by a Neurosurgeon. A twenty-year follow-up revealed permanent remission.

International Council of Psychologists (ICP) World Peace Summit – the Endangered People and Children Human Rights World Summit 2015.

This important symposium will be presented by the International Relations and Human Rights Interest Group for the 73rd Annual ICP (International Council of Psychologists) Conference to be held in Toronto Canada in August 2015. The Human Rights Summit will be chaired by Dr. Sandra E. S. Neil (Australia) World Area Chair Coordinator ICP.

Panel members are being invited and so far those who are confirmed to attend are: Emerita Professor Florence Denmark (USA) as discussant, Dr. Tara Pir (USA), Dr. Ann Marie O'Roark (USA), Dr. Ani Kalayjian (USA), Professor Dr. Roswith Roth (Austria), Professor Dr. Anna Laura Comunian (Italy), Dr. Machiko Fukuhara), Dr. Sandra Neil (Australia). Further details will be available in early 2015 when we have all our replies.

Finally, in conclusion could all the Area Chairs please send a few lines to me; DrNeil@satiraustralia.com about their own area of the world. All your news is of interest to other psychologists.

Submitted respectfully,

Dr. Sandra E. Neil
World Area Chair Coordinator,
International Council of
Psychologists 2014-2017

LIAISONS

Joy K. Rice, Ph.D.
ICP Liaison Coordinator
USA

On behalf of the Presidents of the Congress, I send you this invitation:

It is our pleasure to welcome all of you to the World Congress of the World Federation for Mental Health WFMH 2015 in Cairo, Egypt on 16-19 October, 2015.

This Congress is being organization by WFMH, the Royal College of Psychiatrists—Middle East Division, the Behman Hospital Egypt and the Egyptian Society for the Rights of People with Mental Illness.

We promise to produce a rich scientific, clinical and practice-based program with contributions from service users, their families and caregivers, as well as an interesting introduction to the culture, arts and social life of the local community in Cairo via several social, cultural and artistic events.

For more information, please visit the website at:

Www.WFMH2015.com.

Hope to see you there!

Sincerely,

Dr. Joy K. Rice
ICP Liaison to WFMH

LONG RANGE PLANNING

ICP, INC TO MEET IN YOKOHAMA JAPAN IN 2016

Dr. Machiko Fukuhara, 2016 Local arrangements Committee Chair and former ICP, INC Treasurer, invites ICP INC MEMBERS TO VISIT YOKOHAMA IN 2016. Dr. Fukuhara is also an advisory member of committees of the International Union of Psychological Science's 2016 CONGRESS being held in Yokohama CONGRESS, July 24-28, 2016. She and her Committee, Yoshiko Kato and Edit Nagy-Tanaka, are in negotiations with hotels and congress planners to confirm the site for the ICP, INC meeting in 2016. They expect to submit a proposal with budget to the Board of Directors soon and to have plans confirmed at the ICP, INC 2015 Toronto Annual Conference and Board Meetings.

Yokohama Landmark Tower

Dr. Fukuhara coordinated local arrangements for the ICP, INC ANNUAL CONFERENCE AND MEETING in Tokyo when Dr. Tsuni Shirai was President in 1989-90

Views of the Yokohama region of Japan

CALLS FOR 2017 CONFERENCE PROPOSALS

ICP INC MEETS IN THE GENERAL VICINTY AND TIME FRAME AS OTHER INTERNATIONAL PROFESSIONAL ASSOCIATIONS

ICP, INC ESPECIALLY INVITES PROPOSALS FOR 2017 THAT COULD CONNECT WITH:

- 2017 European Congress of Psychology in Amsterdam : July 11-14, 2017
- The InterAmerican Society of Psychology
- The International Association of School Psychologists
- A major congress of an Allied Discipline Association of Mental Health or Counseling or Academic Professionals.

PLEASE FORWARD ALL PROPOSALS TO PRESIDENT TARA PIR at tarapirimces@msn.com.

MEMBER AND INTERNATIONAL NEWS

Dr. Ani Kalayjian, November 2014

The Advisory Board of the University of Missouri International Center for Psychosocial Trauma (UMICPT) awarded the 2014 Humanitarian Award to Dr. Ani Kalayjian. This award is given annually to an individual who has made significant contributions throughout his/her professional career to promote the mental health of children and their families. The ICPT board recognized Dr. Kalayjian's lifelong contribution in the field of mental health and its impact on the lives of children worldwide. UMICPT had selected Dr. Kalayjian from amongst a large number of peers to receive the 19th Annual Humanitarian Award.

Also, Dr. Kalayjian contributed to a timely article regarding Seasonal Affective Disorder (SAD) - something many people suffer with during the shorter, colder, darker days of the winter seasons. The article can be read at:

http://dailyburn.com/life/lifestyle/sad-cope-with-seasonal-affective-disorder/

Dr. Chris Stout, founding director of the Center for Global Initiatives was delighted to report that the CGI was honored with the designation of 2014 TOP-RATED NonProfit by GreatNonProfits.com.

Dr. Roberto Velasquez, Riverside California, USA

Member Roberto Velasquez, PhD, working with Dr. Eduardo Gamarra (Florida International University), Dr. Jeanett Castellanos (University of California Irvine), Susana Mendez of Tijuana, Mexico and Sequoia Kermott (Alliant International University) has completed a study regarding the Cuban Mariel Boatlift of 1980.

April 15, 2015 marks the 35th anniversary of what is regarded in many circles as the most controversial wave of refugees to arrive on American shores. The impact of the event was widespread for both refugees and Americans and has lasted into current times.

Claudia Zago, Student Member 2014 and InAbsentia Poster finalist writes (November 26, 2014):

Dear Dr. O'Roark and Dr. Dayan,

I am Claudia Zago, one of the Italian participants of the ICP conference in Paris, the wonderful capital of France, last July 2014.

This week there was the meeting with Dr. Comunian and she gave me the certificate of 2nd award for my poster titled, "Shaking Domestic Violence with Laws" and the relative bank check.

I really feel glad and proud for this acknowledgement and for the precious opportunity I had to present directly at the ICP convention, the research I realized in Portugal. Not only was ICP a great opportunity for me, but to be one of the speakers at the Symposio, "Gender identities around the world: an international challenge between culture, society and everyday practices" [which was] well organized by Hochdorn Alexander, allowed my international academic experience to grow a lot.

I really want to thank you and the ICP committee, also in the name of my co-author Paolo Cottone, for this great result.

Best regards,

Claudia

And from Chris Stout's newsletter from the Center for Global Health, a good deal of study, conversation and communication about the relationship between man and animals:

January 7, 2015, Chicago, Illinois

Monthly meeting of the Center for Global Health Network will present Dr. John Arthur Herrmann: "One Health: We're all in this Together."

Discussion regarding how human, animal and ecosystem health are interrelated; identify the need for effective communication between health care providers in humans, animals and with public health professionals; describe how surveillance systems for infections and non-infectious diseases across human and animal populations within critical ecosystems can be integrated to predict and manage outbreaks effectively.

Meeting at Gerald Moss Auditorium, 909 S. Wolcott, Chicago, Illinois. 1 CME credit eligible.

The Executive Committee of Non-Governmental Organizations Associated with the United Nations Department of Public Information

HAPPY HOLIDAYS!

Dear Fellow NGO Representatives:

As another successful year comes to a close we wish you and your families a happy holiday season.

The NGO/DPI Executive Committee, (DPI), of which I am Chair, works in close partnership with the United Nations Department of Public Information (DPI). It is comprised of eighteen NGO representatives elected by organizations officially associated with DPI. The Executive Committee was founded to provide leadership and strategic direction for the NGOs with respect to their association with DPI and to help NGOs become more knowledgeable about, and make effective use of, information on the U.N.'s purpose, policies, program and activities. We represent you.

Organizing the NGO/DPI conference is one of the many activities the Executive Committee undertakes to represent the concerns and interests of over 1,500 non-governmental organizations (NGOs) associated with DPI. The conference held in August this year was a great success and its report and Declaration is mentioned in the Secretary-General's recent report **on "The Road to Dignity by 2030: Ending Poverty, Transforming All Lives and Protecting the Planet,"** which exemplifies the important role and contribution of non-governmental organizations and civil society to the post-2015 sustainable development agenda.

Other activities undertaken by the Executive Committee to benefit the NGO community include organizing the popular communications workshops, youth programs, networking events and outreach to NGOs associated with DPI throughout the world.

Building on our past success, we are planning a full program of NGO activities next year and we need your help. The intensive efforts needed to mount a successful conference; providing opportunities for NGOs in developing countries to participate and other activities that we provide; imposes significant financial burdens on the all-volunteer DPI/NGO Executive Committee.

The NGOs are critical to the success of the United Nations. We are the voice of **Civil Society**. It is through all of our efforts that the U.N. and its member states succeed.

Yours sincerely,
Anne-Marie Carlson
Chair, NGO/DPI Executive Committee

Merry Christmas and Happy 2015 from the Ecadoc European Research Community!

To see what the Padua Ecadoc community is up to, visit them at: http://larios.psy.unipd.it/ecadoc/pages/1_summer_school.php

CALL FOR ARTICLES

This newsletter is your publication. While we hope to provide resources and information that are helpful to our global community, YOUR news is very valuable to fellow ICP members and to all of those who receive this newsletter around the world. Many organization leaders receive this newsletter quarterly and take note of your accomplishments, studies, and commitment to a healthier global community. We all learn, inspire and encourage each other with this sharing of information!

In addition to the *International Psychologist* (aka the IP), a semi-annual journal-type publication is also put out to showcase articles, papers, and studies longer than the average 350-500 words desired for the IP. This publication is known as the *International Understanding*.

Please send your inquiries or submissions to Dr Ann O'Roark, at **annoroark@bellsouth.net**. The guidelines are pretty simple. Save text in MS Word format (.doc or .docx) 11pt. Times New Roman and prepare the work using the current APA style. Photos also appreciated. Submit those in a jpeg format and send as attachments as well.

Nancy Quatrano, Publisher

SECTION III: ADMINISTRATIVE

EDITOR'S REPORT

ICP, INC CELEBRATES 73 YEARS OF ANNUAL MEETINGS: UNIQUE PERSON TO PERSON SHARING OF PSYCHOLOGICAL KNOWLEDGE, ETHICS AND VALUES REQUIRES ACTIVE PARTICIPATION FROM MEMBERS EACH AND EVERY YEAR

Ann Marie O'Roark, Ph.D., ABAP

St. Augustine, Florida. For those of us committed to discovering ways to continue the contributions of ICP, Inc. to the community of international associations, a new year offers a fresh vista of opportunities. One of the oldest / first organizations to be global in psychological membership (1941) ICP, Inc. became one of the earliest to embrace interdisciplinary membership in 2011.

Being innovative and inclusive are hallmarks of ICP's culture, which has always been values based: peaceful resolution of national differences; individual collaboration and respect across national boundaries; and contributing to the wellness and education for citizens of every country.

In addition to aspirational motivations for quality of life for people served by psychologists, ICP's founding members began with commitment to highest of standards in educational preparation for those who teach, conduct research and practice in the area of human behavior, treatment or theory.

In order to promote deeper cross-cultural understanding and collaborations, ICP follows a path that results in smaller-sized membership constituency and conference gatherings. That distinctive desire for more than a casual acquaintance with international colleagues is worth the membership fee and time necessary to be an active contributor to ICP's annual conference and newsletter.

Moreover, the unique history, role and incubator functions of ICP in the community of international associations is an opportunity that is unavailable in groups that are intentionally focused on specializations within the discipline or activities in one geographic region. In

[continued on next page]

keeping with its larger role, ICP introduced a number of activities and structural features currently popular in liaison organizations, such as liaisons, UN NGO and DPI participation; Regional and Area Chairs for communications and conference announcements; newsletter and publication opportunities for newcomers to international concepts and scientific writing; InAbsentia graduate student posters for those who cannot afford to travel internationally yet.

The Universal Declaration of Ethical Principles for Psychologists (2008) is fundamental "common ground" for ICP members and a bond with members of liaison organizations, especially IAAPsy, IUPsyS, SIP, EPA, American Psychological Association, Canadian Psychological Association, International Cross Cultural Association, International Association of School Psychologists. [note: IAAP recently changed its internet identity to IAAPsy].

Universal Declaration of Ethical Principles for Psychologists

Adopted by the Assembly of the International Union of Psychological Science in Berlin on July 22nd, 2008.

Adopted by the Board of Directors of the International Association of Applied Psychology in Berlin on July 26, 2008.

Preamble

Principle I: Respect for the Dignity of Persons and Peoples

Principle II: Competent Caring for the Well-Being of Persons and Peoples

Principle III: Integrity

Principle IV: Professional and Scientific Responsibilities to Society

Preamble:
Ethics is at the core of every discipline. The Universal Declaration of Ethical Principles for Psychologists speaks to the common moral framework that guides and inspires psychologists worldwide toward the highest ethical ideals in their professional and scientific work. Psychologists recognize that they carry out their activities within a larger social context. They recognize that the lives and identities of human beings both individually and collectively are connected across generations, and that there is a reciprocal relationship between human beings and their natural and social environments. Psychologists are committed to placing the welfare of society and its members above the self-interest of the discipline and its members. They recognize that adherence to ethical principles in the context of their work contributes to a stable society that enhances the quality of life for all human beings.

The objectives of the Universal Declaration are to provide a moral framework and generic set of ethical principles for psychology organizations worldwide:

1. to evaluate the ethical and moral relevance of their codes of ethics;
2. to use as a template to guide the development or evolution of their codes of ethics;
3. to encourage global thinking about ethics, while also encouraging action that is sensitive and responsive to local needs and values; and
4. to speak with a collective voice on matters of ethical concern.

The Universal Declaration describes those ethical principles that are based on shared human values. It reaffirms the commitment of the psychology community to help build a better world where peace, freedom, responsibility, justice, humanity, and morality prevail. The description of each principle is followed by the presentation of a list of values that are related to the principle. These lists of values highlight ethical concepts that are valuable for promoting each ethical principle.

The Universal Declaration articulates principles and related values that are general and aspirational rather than specific and prescriptive. Application of the principles and values to the development of specific standards of conduct will vary across cultures, and must occur locally or regionally in order to ensure their relevance to local or regional cultures, customs, beliefs, and laws.

The significance of the Universal Declaration depends on its recognition and promotion by psychology organizations at national, regional and international levels. Every psychology organization is encouraged to keep this Declaration in mind and, through teaching, education, and other measures to promote respect for, and observance of, the Declaration's principles and related values in the various activities of its members.

You can read the full declaration at the IAAPsy web site at **www.iaapsy.org/**

We welcome your annual contribution to the ICP mission: proposals for the 2015 conference; articles for the *IP International Understanding ;* nominations for the spring Board elections.

Warm Wishes for a happy year ending and year beginning,

BANKING AND RECORDS MANAGEMENT

Ms. Nancy L. Quatrano, USA

BANKING AND RECORDS MANAGEMENT JUNE—NOVEMBER 2014

Hastings, Florida. The ICP net worth is stable at $86,097 as of December 1, 2014:

The PayPal account balance is $916.00 and is comprised of both membership dues and some conference payments due back to the operations account. Still outstanding is $1264 of invoiced fees expected to be paid by end of the year, which belong to the operations account for conference expense reimbursements.

The convention account balance of $2,537 represents unspent funds from the Jakarta-Hawaii conference of 2013. The Paris conference did not realize a profit. This balance has been committed to the 2015 convention chair for the Toronto, Canada area conference budget which is still being developed.

The operations account balance is at $22,432.93. To that balance, the PayPal amount of $826 and $600 from the award fund will be added by year end. There is $1250 due to contractors for work being done for banking and records and organization's publications, and another $100 due to the State of Connecticut for our corporation reports and fees. This does not reflect the payment of dues (PayPal) which at this time is for 2 new student members only. No existing members have renewed their dues at this time.

The escrow (awards/reserve) account balance is at $60,211.01 but I'll be transferring $600 of that into the operations account on behalf of the Fukuhara fund payments. The awards of 2013 and 2014 need to be withdrawn to reimburse the ICP for the award checks issued. Interest has been minimal at approx $2.51 per month.

The year has been full to say the least. Work on the needs of the 2014 conference consumed more than 240 of my hours. I also handled membership information, sent *Welcome* emails, scanned applications and managed the email inquiries when there were issues. One prospective member who lives in a country that has almost no financial structure tried his best to pay dues to become a member, but after all his attempts the result was a fraudulent money order that cost him $40, the ICP organization a $12 fee for the returned item, and me approximately 10 hours of trying to resolve the situation with him, banks, attorneys, etc. Membership rosters are updated monthly and the email addresses for our various mailings are updated as I am notified of changes.

And so, as this year closes on our calendar, I still have a few things to do. January will mean preparation of the tax documents (1099) for the contractors, a summary of income and expenses for the 2014 filing of the 501(3c) annual reports with the State of Connecticut and the IRS filing for 2014 which I'll visit the CPA for.

And now, there's Toronto in 2015 and I'm just sure you'll be sending all of your dues in to me this week, right?

Wishing you all a happy, healthy, prosperous and blessed holiday season and 2015! See you in the spring!

Respectfully,

Nancy Quatrano

Banking and Records Manager

2nd NOTICE OF 2015 DUES

Go today to the website at www.ICPWEB.ORG and complete your renewal/membership form and submit your payment via the easy PAY NOW buttons wonderfully worked out by our webmaster, JP Abilla, a team member with the IMCES organization. You'll be all done in just a matter of a few minutes!

And if you'd prefer to complete your membership form (used for updating our records if you are renewing) manually and send it to me with a check that's perfectly fine, as well! My address is on the form. And, the form is also located here in this section of the IP as well!

Before the rush of new year things becomes overwhelming, and before the late fees kick in on January 31, 2015, get those dues paid so we can build a budget that will keep ICP healthy and moving forward. Thank you!

Nancy Quatrano

ICP, INC. 2015 ANNUAL CONFERENCE AND MEETING

TORONTO CANADA

7-31 .. 8-4 2015

CALL FOR AWARD NOMINATIONS

CALL FOR PAPERS
The Seisoh Sukemune/Bruce Bain Encouragement of Early Career Research Award 2014-15

Submission Deadline: May 1, 2015

Purpose
The Award for Research in International Psychology recognizes outstanding early career contributions to scholarly endeavors addressing psychological issues of a universal or multinational significance. It is designed to encourage research that systematically addresses the psychological dimensions affecting the quality of human life, and to enhance and reinforce the mission and goals of ICP (http://www.icpweb.org/). For the purpose of this award, "research" is broadly defined to include all paradigms of scholarly endeavor, such as laboratory experiments, field experiments, field studies, correlation and evaluation studies, historical studies and case histories. The recipient is expected to present an address at the ICP annual convention that relates to his/her research.

Criteria for eligibility
The recipient must be a psychologist (including a student).

Paper selection criteria

The paper's logic, its purpose, its methodology, its universal or multinational significance, contribution to the development of international psychology, and contribution to the development of human well-being. The recipient must be the first or sole author of the paper; her/his contribution must be greater than 50%.

Submission procedure & requirements
Candidates *from all over the world* are invited to submit a paper and a cover letter by e-mail (to **ceci-cheng@hku.hk**) to Prof. Cecilia Cheng, Chair of the ICP Research Awards Committee, not later than May 1, 2014 (date of email or postal delivery).

NOTICE OF SELECTION: JUNE 1, 2015

Prof. Cecilia Cheng

Chair of the ICP Research Awards Committee
Department of Psychology
The University of Hong Kong
Pokfulam Road
Hong Kong

Paper and application must meet the following requirements:

1. The research must be based primarily on the candidate's own work, and must be considered distinguished. The candidate must be the first or sole author of the paper. Her/his contribution to the paper must be greater than 50%.

2. The paper must not have been published elsewhere, but may be based on the applicant's unpublished bachelor, master, diploma or dissertation research.

3. The paper must be prepared in the style and format specified for journal articles by APA (Publication Manual).

4. The length of the paper is limited to 25 typed, double-spaced pages (maximum), including abstract, references, figures and tables.

5. One attached file accompanied by a **cover letter** which provides the following information: (1) Title of the paper, author's name, institutional affiliation, mailing address, telephone and fax numbers, and email address. (b) Applicant's curriculum vitae (CV). (2) Two letters of support which stipulate why the applicant is deserving of the award. (3) A statement signed (electronically or by hand) by the candidate applying for the award certifying that (a) the material presented is original and is primarily the candidate's own work, and the material has not been previously published; (b) the contribution of the candidate to the paper is greater than 50% (in case of multiple authorship and he/she is the first of two or more authors); (c) additionally, if the paper is judged to be the winner of the competition, the candidate agrees to present it at the next annual convention of ICP.

Main selection procedure
1. The Research Awards Committee evaluates papers according to a standard point system.

2. The Chair assures that results are reported to the ICP-Board.

Prize
The prize for winning the research award will consist of

- a certificate
- US$ 200.00
- an invitation to present the research at the upcoming ICP convention
- there will be no registration charge at the upcoming ICP convention (registration waived)
- membership in ICP, Inc. for 18 months

Watch the website for updates throughout the year.

 [continued on next page]

Distinguished Contribution Award: Frances Mullen Award
Submission Deadline: May 20, 2015

This award is presented to honour a member of the ICP who has a long and distinguished history of research or applied contributions to one or more of international areas. Previous recipients include Dr. Frances Mullen, first ICP Secretary General; Dr. Elisa Margaona, Mexico; and Dr. Frances Culbertson, USA, former president of ICP.

Nominees must be (a) either 20 years past the granting of their doctoral degree or at least 50 years old at the time of nomination, and (b) a Member of ICP. The award recipient will be asked to serve on a committee to select subsequent award winners.

Anyone, including a candidate him or herself, may nominate an ICP member for the award.

Nomination material includes: (a) nominee's curriculum vitae and (b) name, address, phone, fax, and email of nominator and nominee. Please send your letter of nomination and address any queries to:

Dr. Anna Laura Comunian, 2014-15 Chair.

E-Mail: **annalaura.comunian@unipd.it**

The Fukuhara Advanced International Psychology Research and Service Award

Submission Deadline: May 20, 2015

This award is given to a midcareer or senior level psychologist with distinguished contributions to international psychology in research and service and is funded through an ICP, Inc. Award Fund established by Dr. Machiko Fukuhara, past Treasurer of ICP, Inc., Organizer of the 1990 ICP conference in Tokyo, research collaborator with past president Charles D. Spielberger on State-Trait Measures of Anxiety, Anger, Curiosity, and Depression.

Dr. Fukuhara served two terms on the Board of the International Association of Applied Psychology and is Director of the Japanese Association of Microcounseling , Director of Psychoeducation Institute, and Honorary Professor of Tokiwa University. Dr. Fukuhara epitomizes the standards of excellence that ICP, Inc. and this Advanced International award is accompanied by a check, a certificate, conference registration for participation and presentation at the annual conference, and the next year's dues for ICP membership.

Please send your letter of nomination and address any queries to: Dr. Ann O'Roark., 2014-15 Chair.
Email: **annoroark@bellsouth.net**

The Denmark-Grunwald Award for Gender Research and Service

Submission Deadline: June 1, 2015

The Denmark-Grunwald Award for Feminist Research and Service is presented to honor a member of ICP who has the history of research and service that directly benefits the health, promotion and well-being of women in the world.

Anyone, including a candidate him or herself, may nominate an ICP member for the award.

Nomination material includes: (a) nominee's curriculum vitae and (b) name, address, phone, fax, and email of nominator and nominee. Please send to Dr. Donna Goetz, at **donnag@elmhurst.edu**

The Dayan-O'Roark InAbsentia Poster Awards

Chair: Dr. Anna Laura Comunian

Submission Deadline: July 20, 2015

These awards are to encourage participation by those students who are unable to attend the conference and want to present a pictoral abstract of their research work.

Judges are ICP members in attendance who have been professionals in the their field for a number of years.

The posters submitted remain on display throughout the duration of the Annual Meeting and Conference for all attendees to view. Winners are awarded a check and a certificate for their work.

ICP CALLS FOR SERVICE

CALL FOR APPLICATIONS FOR SERVICE AS SECRETARY GENERAL/ADMINISTRATIVE OFFICER

The International Council of Psychologists, Inc. Board of Directors authorized the re-opening of a call for applicants for the role of Secretary General for the association. Applications for this administrative role are not restricted by citizenship, race, gender, age or sexual orientation. Special consideration will be given to persons with experience in office management, background in a professional discipline associated with health and wellness, as well as experience in professional associations. *The position is not full time, compensation will be discussed related to expected operating expenses and some travel allotment.*

Interested members should contact Board Secretary Cecilia Cheng at cec.cheng@gmail.com

IP EDITOR WANTED

CALL FOR APPLICATIONS FOR IP EDITOR

1.1] The IP editor is selected from applicants responding to a public "call" for applicants presented in the IP, the ICP website, and several newsletters of other international and professional associations. The Outgoing Editor and C&P Chair serve on the Selection Committee with other ICP Members appointed by the President.

- The Selection Committee rank orders applicants and submits a report to the President. Following Board approval, the President, Secretary, and next IP Editor sign a letter of agreement for a term of three years, renewable for a second term.
- The IP Editor reminds leaders and members of upcoming submission deadlines and contacts particular leaders directly for timely submissions related to their responsibility areas.
- The IP Editor is guided by the newsletter protocol and special requests from the President, the Convention Chair, and the members.

Interested parties should contact Ann O'Roark at

annoroark@bellsouth.net.

CALL FOR 2015 NOMINEES

ICP, INC. BOARD OF DIRECTORS 2015 VACANCIES FOR SPRING BALLOT 2015

All must be members in "good standing" – dues paid. President and Treasurer are typically individuals who have served on ICP INC board previously, or held similar positions in comparable associations. The composition of the ballot intentionally represents the global nature of ICP, INC.

All nominations should be sent to Dr. Ludwig Lowenstein, ICP Past president as soon as possible. Elections need to be held in the spring months. At this time there are nominations needed for President Elect, Treasurer and two directors at large. (We have a few, but not enough!)

Please send nominations to:

Ludwig.lowenstein@BTinternet.com and copy Ann M. O'Roark (annoroark@bellsouth.net), Naty Dayan, Dennis Trent, Chik Hiew, and Anna Laura Comunian.
Thank you!

Views of Toronto, Canada

GUIDELINES FOR HOSTING AN INTERNATIONAL COUNCIL OF PSYCHOLOGY ANNUAL CONFERENCE AND BOARD MEETING

The International Council of Psychology, Inc holds an annual scientific program and Board meeting each year in accord with the policy of freedom of movement of scientists . The conference host (local arrangements committee) must be a member of ICP,Inc. To establish the feasibility of submitting an application, a potential applicant might begin with an overview of some logistical issues for proposing a Congress venue:

- Is there a conference venue to host at least 100 participants? (50)? (30)?
- Are there sufficient hotel rooms close to the conference venue
- Is there a scientific community to develop or sponsor the program?

Proximity in time and site to other major professional congresses. ICP operates in alliance with the International Association of Applied Psychology [IAAP, quadrennial congresses], the International Union of Psychological Science [IUPsyS, quadrennial congresses that meet in between the IAAP cycles]; the American Psychological Association or the Canadian Psychological Association; with options for meeting near allied professional association on intervening years.

Proximity in time and site to other major professional congresses. ICP operates in alliance with the International Association of Applied Psychology [IAAP, quadrennial congresses], the International Union of Psychological Science [IUPsyS, quadrennial congresses that meet in between the IAAP cycles]; the American Psychological Association or the Canadian Psychological Association; with options for meeting near allied professional association on intervening years.

Geographical Rotation among continents and countries attempts to guarantee broad geographical coverage, proximity to other major professional conferences, or in regions where psychologists may not have presented a scientific program previously.

The scientific community in the conference country is especially invited to participate in the scientific program.

Communication: There is a requirement for intensive and frequent communication between the Board President, Scientific Program Chair, Local Arrangements Chair, Workshops Chair, InAbsentia Student Posters Chair, and Awards Chairs.

Costs for participating in the Congress are another factor. The Board will expect that the registration fee will be reasonable, that there is a range of good hotel rates (particularly including inexpensive ones), and that travel costs can be kept as low as possible. Despite efforts to keep costs low, travel is expensive for **young psychologists**, and for psychologists from the **developing world and transition countries**. It is therefore important to provide a plan that will guarantee special fees, housing, and support for those colleagues.

A **balanced budget** needs to be provided in outline. It is important to show realistically how the income (registration fees and other) will cover your costs. It may be helpful to consult the preceding organisers of Conferences in drafting the budget. The budget is reviewed by the President and the Treasurer, who can offer advice.

ICP, Inc. is a volunteer organization. There are vacancies on the list below that you may be able to fill! If so, please contact President Tara Pir and let her know your interest. Her email is tarapirimces@msn.com.

____ **Archives Committee**:
Committee Chair is liaison to and communicates with the Archives of the History of American Psychology at the University of Akron, Ohio. Information about AHAP is provided in the newsletter several times a year along with instructions for how members are to ship ICP records, older than three years to the Archives
.

_____ **Area Chair**:
Area Chairs represent ICP, Inc. in a specified geographic region. Country or State Area Chairs are coordinated by the World Area Chairs Coordinator and submit reports twice a year to the WACC for publication in the newsletter and for an annual report to the President and Board. Disseminating information about ICP, Inc. conferences, recruiting members, and organizing regional meetings are typical activities of Area Chairs.

____ **Awards:**
Committee members issue calls for nominations in relevant newsletters and websites, solicit several candidates, review documents submitted, arrange certificates and stipends if provided, arrange for appropriate time allocations in the annual conference scientific program, prepare newsletter and regional announcements of recipients, in order of establishment by ICP, Inc.

___**Distinguished Contributions and Outstanding Service to International Psychology**. Frances Mulen Award [1986]
___**Gender Research and Service**: Denmark-Grunwald Award
____**Early Career Research**: Bain-Sukemune Award [1996]
____**InAbsentia Student Poster Exhibit and Awards**: Dayan-O'Roark-BarredaHansen-Comunian [2005]
____**Latin Student Research Paper** presentation at Annual conference: Ernesto Gonzalez Rosales Alvarez / McCarthy Award [2009]
____**Advanced International Research and Service**: Fukuhara Award [2011]

____ **Membership Committee**:
Committee Chair provides recruitment literature, records application information, updates contact data and membership details for newsletter publication, and welcomes new members, contacts non-continuing members and provides statistics on membership constituencies to the President and Board. Committee members assist the Chair with recruiting and maintenance activities in their regions.

____ **Continuing Education:**
Committee members meet via telephone and email to develop call for proposals for workshops for the annual scientific conferences. CE administers the necessary documentations for awarding continuing education credits. In addition to developing the ICP, Inc. World CE program, the American Psychological Association CE sponsor authorization is maintained or arranged with allied organizations..

____ **Finance Committee**:
Committee members review the annual budget and assist the Treasurer as requested. FC oversees and makes recommendations for ICP, Inc.'s financial investments and award programs. The FC audits the tasks of the Treasurer annually.

____ **Interest Groups:**
Interest Groups are formed to enable collaborations on topics of professional concern or research. Groups plan joint research and/ or program events for the annual scientific conference. Papers are presented in the International Understanding section of the newsletter.
Currently active groups are:

____ Creativity & Education [Milgram]
____ Forensic [Lowenstein]
____ Health [Pir]
____ Peace and Human Rights [Neil]
____ Religion & Spirituality [Rayburn]
____ Women's Issues [Muhlbauer]

____ **Liaison Representatives**
Individuals who are members of professional associations other than ICP, Inc. submit articles to the Liaison Coordinator for presentation of information about that organization in the newsletter and submit ICP, Inc. information to the association in which they hold membership/represent.

____ **Long Range Conference Planning:**
Committee members solicit and review proposals for ICP, Inc. annual conferences 3 to 5 years in advance. Timing and sites are coordinated with major professional congresses. LRCP presents completed proposals from the proposal submitters. Once a Local Arrangement Committee (LAC) is established, LRCP provides information and assistance. The LAC makes arrangements for meeting site, hotel information, tours, banquet, and promotional materials.

"How can Psi Chi best partner with international psychologists to expand the honor society worldwide?" This has been an important question since 2009, when the 1,100 chapters of Psi Chi in the United States voted to become "The International Honor Society in Psychology". This report updates and expands on a unique symposium offered at the 120th meeting of the American Psychological Association in Orlando, Florida, in August of 2012 — the first symposium on the Presidential theme of "Building Bridges" between Psi Chi and international psychology [8]. Here, seven leaders in international psychology in North and South America join to address different aspects of this timely question--with many suggestions on how to "build bridges" to expand Psi Chi globally. It was in part due to this historic symposium that in 2013 Guatemala became the first nation in Latin America, and Russia the first nation in mainland Europe to launch a chapter of Psi Chi.

Key words: International Honor Society in Psychology Psi Chi, American Psychological Association (APA), international psychology, student scientific society, scientific work of students.

OVERVIEW

(by Martha S. Zlokovich)

The field of international psychology is expanding as people around the world connect to share ideas about psychological and social issues, psychology education, and psychological interventions. In 2009 Psi Chi, the National Honor Society in Psy-

chology — founded in 1929 in the US — became Psi Chi, the *International* Honor Society in Psychology. The purpose of this symposium was to learn more about the internationalization of Psi Chi including how and why the Society has been welcoming international Psi Chi chapters. The individual presentations were followed by discussion of the issues brought up by the symposium presenters.

Many of the contacts Psi Chi makes outside the US are dependent on the time, effort, and dedication of international psychologists who spread the word about Psi Chi when they travel. Since 2009 the first two international chapters (affiliate chapters in Canada and Ireland that became full chapters at that time) have expanded to 15. These include 12 chapters in ten countries, and another three chapters outside the 50 states. As of September 2014, additional applications were in progress from faculty in Australia, Ecuador, India, Indonesia, Italy, Kuwait, Malaysia, The Netherlands, Puerto Rico, and Serbia [20; 21].

WHAT IS INTERNATIONAL PSYCHOLOGY?

(by Alvin Y. Wang)

What is International Psychology? What are reasons for Psi Chi to become an international organization? How can chapter advisors help internationalize their chapters?

In 2009, after several years of deliberation, Psi Chi's Board of Directors elected to "*go global.*" It is interesting to note that Psi Chi was founded at the Ninth International Congress of Psychology which took place on September 4, 1929 at Yale University. So 80 years after its founding, Psi Chi returned to its international roots.

Psi Chi's Purpose Statement was revised to reflect its global aspirations: *Psi Chi is an international honor society whose purpose shall be to encourage, stimulate, and maintain excellence in scholarship of the individual members in all fields, particularly in psychology, and to advance the science of psychology.* With this global vision, Psi Chi began to rebrand its logo, redesign its website, and update its marketing efforts to better serve the international psychology community.

Since 2009, Psi Chi expanded its outreach efforts to cultivate new friends and partnerships with organizations that share Psi Chi's vision for advancing psychology in the international arena. In this regard Psi Chi views APA Division 52 as a steadfast partner who has helped us build bridges across international waters. Several members of Division 52 were instrumental in these efforts. Dr. Harold Takooshian (former Psi Chi President) promoted Psi Chi to four Russian institutions in Moscow including: the Higher School of Economics (HSE), HSE's International Laboratory of Socio-cultural Research, the People's Friendship University of Russia, and the Russian Academy of Science's Institute of Psychology. Also instrumental in our friend-raising efforts was Dr. Mercedes McCormick, who is incoming President of Division 52 and Psi Chi Vice-President for the Eastern Region. Dr. McCormick promoted and implemented joint programming between our two organizations at the 2012 annual meeting of APA as well

as past meetings of the Eastern Psychological Association. Psi Chi is also appreciative of the support and sage advice concerning internationalization provided by two of Psi Chi's past-presidents: Dr. Florence Denmark and Dr. John Davis.

Psi Chi's Executive Director Dr. Martha Zlokovich has racked up her frequent flier miles while travelling overseas to promote our organization. In November of 2011, she attended the Caribbean Regional Conference on Psychology in the Bahamas and in July 2012 she attended the annual meeting of the International Association of Cross-Cultural Psychology in South Africa. This was followed by a Psi Chi presentation she made at the annual meeting of the International Congress of Psychology which was also in South Africa. There were several co-presenters including Psi Chi President Dr. Susan Amato-Henderson and Psi Chi President-Elect Dr. Maria Lavooy. It is also noteworthy that Dr. Zlokovich is incoming chair for the International Relations Committee of Division 2 and she is also a member of the Division 52 International Committee for Women.

Early Psi Chi's efforts began showing results, with the first five international chapters established in Canada (2), Ireland, New Zealand, and Egypt. We also have chapters in Puerto Rico (2) and in the U.S. Virgin Islands. Two chapters have been approved for University of the West Indies campuses (Barbados and St. Augustine), and several other international chapters are in various stages of the review process including: Russia, Guatemala, Australia, and England.

As with any organizational expansion, growing pains are to be expected. Psi Chi's Board of Directors is currently discussing several issues related to our international efforts. Perhaps the most critical is how we can meaningfully integrate international chapters into the governance structure of our society. One possibility is that an international region is created in additional to the six regions that currently exist. Another issue is that Psi Chi must improve its IT infrastructure to better meet the needs of our international chapters. Finally, Psi Chi's Board of Directors has been discussing ways in which our international chapters can participate in the numerous grants and awards programs that are available to students and faculty members.

As I pointed out earlier in my presidential message to Psi Chi members, "the time is right for Psi Chi to sit at the global table and join the transnational discourse that already exists through organizations such as Division 52..." [19. P. 4]. I am pleased to report that as of now Psi Chi has made significant advances in its efforts toward internationalization.

COMMUNITY INTERNSHIPS: STRENGTHENING MULTICULTURAL COMPETENCIES THROUGH INTERNATIONAL COLLABORATIONS

(by Maria del Pilar Grazioso)

In my Universidad del Valle de Guatemala (UVG), our students and faculty have a long tradition of working together on community partnerships. In 2013, after three years of effort, our UVG successfully formed the first chapter of Psi Chi in Latin America. One key project we hope to pursue is culturally-appropriate Spanish-language materials

to help introduce the Psi Chi concept to the hundreds of four-year colleges throughout Latin America. In July of 2014, our chapter was pleased to release a five-minute, Spanish-language video that is suitable to show throughout Spanish-speaking Latin America, www.youtube.com/watch?v=xo2lsDKtiw4&feature=youtu.be.

We hope to expand on this early effort, to promote Psi Chi globally.

PSI CHI OUTREACH TO THE EASTERN HEMISPHERE

(by Harold Takooshian)

How can Psi Chi best expand beyond North America? Though Psi Chi had its origins at an international meeting in 1929, it has been limited to the USA for its first 80 years [15]. Yet Psi Chi has long been interested to open its benefits to the fast-growing number of psychology students and faculty outside the USA [5], to the point of inspiring a new international student group on its 70th anniversary in 1999 — the International Psychology Student Organization, or IPSO [16]. We know Psi Chi's immense role in shaping psychology in the USA [6], which it portends to do in other nations [10; 12; 14].

On its 80th year in 2009, when Psi Chi chapters voted to "Go global," many leaders of the APA international division were also past national officers of Psi Chi. Prime among these in 2012 was Psi Chi Eastern Vice President and Division 52 President-elect Mercedes McCormick, who chose her timely Presidential theme for 2013: "Building Bridges between Psi Chi and international psychology" [8].

In 2013, the Psi Chi Board appointed 14 Psi Chi "International Ambassadors" within the APA Division of International Psychology, to spread the word about Psi Chi while traveling abroad [13]. These 14 Ambassadors were: Bernardo J. Carducci, Lauren Crane, Dwayne Crites, John M. Davis, Florence L. Denmark, Melanie Domenech Rodríguez, Joseph R. Ferrari, Gina Grimshaw, Paul I. Hettich, Hy Le Xuan, Mercedes McCormick, David Skeen, Michael J. Stevens, Harold Takooshian.

As of 2014, the 1,100 Psi Chi chapters at U.S. campuses include nearly 90 percent of eligible U.S. four-year colleges. In contrast, Psi Chi has barely a dozen chapters among the thousands of campuses now eligible on six other continents.

Russia. In 2010, to mark the 125th anniversary of the origin of psychology in Russia in 1885, Professor Alexander Voronov integrated Psi Chi into his five-day multi-city conference [18]. Hundreds of students and faculty at five institutions in two cities appeared visibly excited to learn about the benefits of Psi Chi. One professor, Alexey Sozinov of the Russian Academy of Sciences in Moscow, went further to produce a nine-minute Russian-language DVD describing Psi Chi in detail--its origin, growth, procedures, benefits. This DVD was posted on YouTube, http://youtu.be/1t63fKZ1OPY. Teams of Russian students and faculty began to participate in Psi Chi programs in the USA in the 2011 EPA in Cambridge, 2012 EPA in Pittsburgh, 2013 EPA in New York, 2014 EPA in Boston [1; 11].

In 2012, when I returned to Russia as a Visiting Professor at the Higher School of Economics (HSE), I could see changes within just two years. Students at a few Russian

schools had formed active psychology clubs. (One chapter application requirement is having had an active psychology club for at least one year.) Students were becoming more involved in co-curricular research and other activities [4]. The People's Friendship University of Russia (PFUR) hosted co-curricular activities for its 20,000 students from 140 nations (www.rudn.ru/en/). The Institute of Psychology at the Russian Academy of Sciences (IPRAS) hosted co-curricular activities that brought together students and faculty from diverse institutions, http://ipras.ru/cntnt/rus/novosti/rus_news1/n3468.html. Each of the four institutions I visited was pleased to receive a copy of President-elect Mercedes McCormick's personal invitation to the next Eastern Psychological Association meeting in New York City on 1—4 March 2013, and many came in 2013 in New York and 2014 in Boston.

Russia's land area of 6.6 million square miles makes it the "world's largest nation", and one where Psi Chi may grow rapidly among Russia's 1,100 HEIs (higher education institutions). Hopefully, Psi Chi may use the internet and this Russian outreach model to develop culturally-appropriate DVDs in other languages (Spanish, Arabic, Chinese, French) to reach the countless students and faculty who do not yet know what awaits them in Psi Chi.

In 2013, history was made on October 11, when the Peoples' Friendship University of Russia installed the first chapter of the Society in Russia and mainland Europe [2; 3]. Details on-line: www.youtube.com/watch?v=ggtdPVAPjJY. In that same week in October of 2013, PFUR appeared in the roster of "the world's top 500 universities" in the *QS World University Rankings* for 2013 (www.rudn.ru/?pagec=3372).

WHAT AN INTERNATIONAL UNIVERSITY/COLLEGE NEEDS TO KNOW TO APPLY TO BECOME AN INTERNATIONAL PSI CHI CHAPTER

(by Mercedes A. McCormick)

How does an international university/college start an international chapter in Psi Chi International Honor Society, and foster Psi Chi connection with APA Division 52, International Psychology? In the 21st century, it is fitting for Division 52 and Psi Chi to connect and collaborate on issues important to undergraduate and graduate students as they embark in careers in psychology [8]. It is clear that "the recent expansion of Psi Chi internationally promises to offer student members assistance on the path to academic excellence, exciting research possibilities, leadership opportunities, mentorship for career advancement, and opportunities to provide service to their communities" [9. P. 112].

Background. Psi Chi's international connections stretch back to its very formation on September of 1929, during the Ninth International Congress of Psychology in New Haven-the first world congress on U.S. soil [7].

In 1963, Psi Chi sent psychology textbooks overseas, published a special global issue of its *Psi Chi Newsletter*, and hosted overseas students at the APA meeting. In 1964, Executive Director Ruth Cousins joined a 20-person world tour with the International Council of psychologists (ICP), which later appointed an ICP liaison to Psi Chi. In 1984,

Psi Chi changed its bylaws to allow international chapters, and in 1990s, another push saw Psi Chi welcome applications from schools in Canada, though none completed the chapter process.

In 1994, Psi Chi formed an international committee with a liaison to APA's CIRP, and the committee's chair visited the ICP meeting in Lisbon, Portugal to inform colleagues in other nations about the "impact of a student honor society on a nation's psychology" [12]. Among other things, this committee also worked with APA's Joan Buchanan to conduct two surveys of 75 national psychology associations, to find which nations had student psychology groups like the USA; although no nation reported an independent student group. 15 (20%) permitted some students to affiliate with their national association.

In 1996, Psi Chi invited 50 Canadian schools to its first student mini-convention outside the USA (*Upward Bound*), hosted by the University of Toronto on the Thursday before the APA meetings, and a small cadre of Canadian students joined about 80 U.S. participants.

In 1999, past-President Slater Newman organized a session at APA exploring the formation of the first international student group, close on the heels of his 1998 article in the International *Journal of Psychology* detailing Psi Chi as a "model [that] might well be adapted by leaders in other nations to promote student excellence" [14. P. 367]. In Spring of 2000, *Eye on Psi Chi* published a special issue on international psychology edited by Kay Wilson and Dan Bockert, bringing together original articles by several key cross-cultural figures — Walter J. Lonner, John Davis, Leonore Loeb Adler--and launching the Eye's new International Notes column.

How can Psi Chi members become more involved in this growth of international psychology while still students? Let us see.

Psi Chi's International Connection. In 2012, APA's Division 52 of International Psychology marks its 15th anniversary. In 1997, APA approved this new Division. It quickly grew into a large and active force within US psychology and now internationally. It is important to note that Psi Chi members and Chapter Advisors have been so much at the forefront of this effort.

Several Division 52 Presidents also have been President of Psi Chi. These respected international psychologists include: Florence Denmark (Division 52 President in 1999, Psi Chi President in 1978—80), and Harold Takooshian (Division 52 President in 2003, Psi Chi President in 1998—1999.)

In 2009, Psi Chi went international. In Psi Chi bylaws, the name of the organization was changed to *Psi Chi International* with the mission to be a society in psychology to promote student excellence, leadership, research, and service learning internationally. Since 2009, Psi Chi International has encouraged international colleges and universities to petition to open a Psi Chi chapter. Already a dozen chapters started with the National University in Galway, Ireland; American University in Cairo, Egypt; University of West Indies; Peoples' Friendship University of Russia; and more--as Psi Chi expands globally.

The Psi Chi website has instructions to start a Psi Chi Chapter, www.psichi.org.

INTERNATIONALIZING PSI CHI

(by Florence L. Denmark)

Thank you to our esteemed panel of presenters who have spoken on the psychological and social issues that impinge on Psi Chi students in a world that is becoming increasingly more global.

In 2009 Psi Chi, the Honor Society in Psychology in the US became the *International Honor Society of Psychology,* an impressive accomplishment. This will truly help the next generation of psychologists create a cohesive field of psychology internationally.

The field of International Psychology is expanding as the world connects globally about issues regarding coping with psychological and social issues and learning about interventions that may help others in our global society.

Division 52 is the primary Division within APA with a focus on internationalization of Psychology, whereas Psi Chi is the biggest and newest "international" psychology organization with students, faculty, and other professionals comprising its membership worldwide.

Psi Chi and Division 52 were represented in the conference of the International Congress of Psychology and the International Council of Psychologists recently held in Cape Town, South Africa (July 22—27, 2012).

Going forward, it is our goal to build bridges between Psi Chi and Division 52. We can begin by focusing on the following.

1. *Membership/Outreach*

Assist each other in helping establish chapters during travels abroad.

Sharing resources with each other to help internationalize psychology and outreach for members (collaborative membership drive)

Division 52 members in institutions with Psi Chi Chapters can encourage students to join Division 52. Conversely, Psi Chi chapters can help Division 52 recruit Psi Chi students as student affiliates.

2. *Meetings and events*

Share a suite and collaborate on suite activities

Division 52 may give reports on its activities relevant to Psi Chi members through meetings (and vice-versa)

Having joint session such as this one in future APA meetings

Psi Chi programs can include Division 52 — featured events, talks (and vice-versa)

Speakers Network — focus on student-relevant matters

3. *Mentorship opportunities*

Division 52 members can mentor students

Psi Chi students may become involved in international research and internship opportunities with Division 52 members

4. *Publications*

Psi Chi Journal of Psychological Research, International Psychology Bulletin, International Perspectives in Psychology: Research, Practice, Consultation — provide opportunities to publish collaborative international research

Division 52 President (and perhaps other leaders of Division 52) may write articles on *Eye on Psi Chi.* Conversely, Psi Chi leadership may publish in the *International Psychology Bulletin.*

5. *Grants/Funding Opportunities for mutually beneficial projects*

Collaborative research grants between Psi Chi students and Division 52 members

Division 52 and Psi Chi can pool resources to help fund projects between its members.

6. *Awards*

Recognition given by both Psi Chi and Division 52 to recognize collaboration on research work between students and international psychologists on topics that promote international psychology.

7. *Governance*

Encourage Psi Chi and Division 52 to have representatives/liaisons to attend their midwinter or annual meetings

BUILDING BRIDGES WITH TECHNOLOGY

(by Richard S. Velayo)

I thank our outstanding panel members for their informative presentations. Their information and recommendations will certainly strengthen the international reach of Psi Chi, contribute to building bridges between Psi Chi and Division 52 and more importantly, help promote the internationalization of psychology.

Psi Chi and APA Division 52 can benefit from each other in so many ways. In a way, we are meant for each other. We share an important goal of internationalizing psychology and providing opportunities for students, faculty, practitioners, researchers, and advocates for internationalization to be able to collaborate and share experiences and expertise with each other.

What I would like to emphasize here is how internet-based technologies may help build bridges between Psi Chi and Division 52, which, in turn, further the internationalization efforts of both organizations. In other words, we can go global by going virtual! Internationalization efforts by Psi Chi and Division 52 may continue to explore further innovative ways to collaborate and do outreach.

Many organizations effectively utilize social media in their attempt to reach out to other nations. Psi Chi and Division 52 are no exception. For example, as of March, 2012, both have Facebook group pages effectively establishes their web presence to the world. Facebook, the most popular social networking site, had over 835 million active users worldwide. Of the 835 million users, 233 million came from Europe, 196 million from Asia, 173 million from North America, 113 million from South America, 41 million from Central America, 40 million from Africa, 20 million from the Middle East, 40 million from Oceana and Australia, and about 6 million from the Caribbean (*http://www.internetworldstats.com/facebook.htm*).

Facebook is also accessible in more than 70 different languages. An average of 500 million people log on to use Facebook everyday. The percentage of users in various

countries who are on Facebook are astonishing: 80 percent of all Internet users in Chile, Turkey, and Venezuela, 60 percent of all Internet users in the U.S. and U.K., 20—30 percent of all Internet users in Brazil, Germany, and India, and 15 percent of all Internet users in Japan, Russia, and South Korea. Unsurprisingly, there is less than 0.1 percent in countries that restrict Facebook (like China) [17].

Nonetheless, the global usage and reach of Facebook, and many other Internet-based technologies, is tremendous. Its use by so many students and various academic, professional, and business organizations is indicative of the future of inter-organizational communications in a world that is increasingly global and interconnected.

Also note that there are various other forms of Internet-based technologies: teleconferencing (e. g., Skype), Twitter, Blogs, GoogleTalk and Google+, Wikis, YouTube, and even FaceTime (for Mac, iPhone and iPad users), all of which can facilitate internationalization efforts and outreach.

Bridges. Below are a variety of ways to build bridges between Psi Chi and Division 52 through shared objectives related to membership, meetings and events, mentorship opportunities, publications, grants and funding opportunities, awards, and governance. All of these objectives are feasible and may be efficiently and effectively facilitated, in part, through electronic communications. These are some practical recommendations on how the Internet may build bridges given the shared objectives of both organizations.

1. *Membership and Outreach*

Recruitment efforts may be shared and be done virtually through social media and other internet-based communications. Having membership application forms that encourage dual membership, can be created. Such forms may even be completed online and perhaps presented in different languages.

Division 52 members can send out information regarding Psi Chi activities and events, through their social media accounts and through departmental listservs/emails/ and electronic newsletters. Psi Chi can do the same with Division 52 activities and events.

International Psi Chi chapters can regularly and efficiently keep in touch with the Psi Chi central office, mutually providing each other updates of news, events, and other activities. Selected news may be shared among various Psi Chi chapters and international psychology organizations.

2. *Meetings and events*

Members can participate (and perhaps even present) in activities through Skype, webinars, or even through blogs. Videos of collaborated events may even be posted on YouTube. Facilitating meetings, coordinating events and activities, can be conveniently and easily shared.

There may be times in which students abroad are unable to attend a conference or to be recognized for their leadership or scholarship. Perhaps Division 52 and Psi Chi may explore ways in which members can participate and even present their work through

online meetings, webinars, or even through Skype. Such sessions can be highly interactive between participants and presenters, wherever in the world they may be as long as they have internet access.

3. *Mentoring.* Division 52 members may be able to do their mentoring online.

4. *Research and Grants*

Division 52 and Psi Chi can collaborate on developing a web-based repository of reviewed projects and articles by students from various parts of the globe.

Use of wikis or Google docs to work on electronic documents and projects may be utilized in preparing publications or presentations.

Division 52 members and Psi Chi can work collaboratively on applying for and carrying out grant projects.

Students may help with creating online surveys and in data collection through social media sites.

5. *Governance and Committee involvement.* Members of both organizations may contribute their time and participate in meetings online, which may be an efficient and lower-cost alternative to meeting in person at conferences or midwinter meetings.

In spite of these recommendations, it is wise to keep in mind at least two anticipated difficulties that will likely be encountered. First is that access to the Internet may be limited in other countries, reducing their ability to communicate internationally. Second, language barriers can certainly be problematic between certain nations. Online translation software is becoming more sophisticated to help people to communicate, but it has not reached that level in which we can completely trust this technology to translate one language to another.

In conclusion, Psi Chi and Division 52 are a natural match. It is reassuring to know that a number of its leaders (including our esteemed panelists), continue to serve as important conduits to strengthen the bridges that have been built between our two organizations.

If there are those of you who are not yet members of Psi Chi or of Division 52, I urge you to join both, and to join now, to be part of this tandem force. Given this bridge that has been established, you can expect both our organizations to continue to be at the forefront in the effort to internationalize psychology.

Статья посвящена поиску ответа на вопрос о том, как партнерство с международными психологами может помочь интернализации Психологического общества почета Psi Chi. Этот вопрос стал актуальным начиная с 2009 г., когда 1100 отделений Psi Chi в США проголосовали за то, чтобы стать «международным» обществом. Статья представляет собой обновленный и расширенный отчет об уникальном симпозиуме, состоявшемся на 120-м съезде Американской психологической ассоциации (АПА) в Орландо (штат Флорида) в 2012 г. Это был первый симпозиум по предложенной Президентом АПА теме «Наведение мостов» между Psi Chi и международной психологией [8]. На симпозиуме выступили семь лидеров международной психологии из Северной и Южной Америки со своими предложениями о глобализации Psi Chi. Отчасти благодаря этому историческому симпозиуму в 2013 г. Гватемала первой из стран Латинской Америки, а Россия первой из стран континентальной Европы открыли свои первые отделения Psi Chi.

Ключевые слова: Международное психологическое общество почета Psi Chi, Американская психологическая ассоциация (АПА), международная психология, студенческое научное общество, научная работа студентов.

Part B: International Psychologist Spring 2014 Edition

By Dr. Ann Marie O'Roark, Editor
International Psychologist A/B

This Part B is intended to be used for longer reports and as a place for the ICP's Research Interest Groups to present their collaborative work. One expectation is that *IU* can be a linking pin between print media and electronic communications offered through the ICPWEB.ORG site. Dr. Varda Muhlbauer [Israel] is exploring ways with the help of new Director at Large Diana Boer [Germany] to implement a blog for scientific conversations and professional discussions, as well as using it for planning conference symposia and joint research projects.

We certainly hope that you will enjoy this ICP publication and consider contributing to future issues. This is a fine venue for sharing your work with others in our field.

CALL FOR MANUSCRIPTS

Please submit manuscripts using APA style, Word, 12 pt. Times New Roman to the Editor at annoroark@bellsouth.net. The *IU* is published two to four times yearly, according to the number of manuscripts received. An Editorial Review Panel reviews all material submitted for the International Psychologist for readability and consistency with ICP, Inc policies. *IU* submissions are screened for style and professional content. Submissions may be returned for revisions as needed. We invite your participation. While *IU* is not a formal journal, it may set the stage for re-activating *World Psychology.*

Helping Prevent Elder Abuse Globally Through the Use of Social Media

Richard Velayo, Ph.D. and Michael Trush
Pace University, New York City

Elder abuse is a single or continuous exploitative behavior, or failure to take an appropriate action (as expected) in a relationship, which involves trust, and eventually causes distress or psychological harm to an elderly person. This form of mistreatment can occur at home within a family, care givers/assistants, friends, etc. or in an institution such as a nursing home in the hands of a professional caregiver. Approximately 2.1 million elderly people in America are victims of elder abuse yearly. Neglect and failure to carry out a responsibility towards an elderly person are the most common forms of abuse. Other forms of abuse which often cause psychological and emotional harm include lack of respect and denying the elderly freedom (e.g. freedom of expression and doing what makes them happy like listening to music), controlling all their moves and making all decisions for them, threatening to withdraw care, bullying, financial exploitation (e.g. misappropriation of the wealth of an elderly person, exploiting their finances and depriving them the right to use their wealth as desired, denying them access to their property and giving them false reports regarding their wealth). Other forms of elder abuse include physical abuse like beat-

ing or slapping, unnecessary medical sedation, and physical restraint, as well as sexual abuse (Bagshaw, Wendt & Zannettino, 2007). This paper explores the various forms of elder abuse and how social media can be useful in reversing this vice.

Statistics indicate that women are more commonly the victims of elder abuse and perpetrators of this abuse are mostly men, particularly family members, partners or spouses. People aged 85 years and above are more likely to undergo elder abuse than those aged between 65 and 84. Moreover, exploitation increases as the health of victims deteriorates. Also, elderly people who have a lower socio-economic status are more likely to experience elder abuse. Other aspects like psychological disorders, physical injury, cognitive impairment, restricted mobility, fear of isolation, ignorance of their rights and social isolation can increase the risk of an elderly person being mistreated (Bagshaw, Wendt & Zannettino, 2007). Some individuals hold the belief that elderly people are weak, helpless and less significant in society. These are ageist attitudes, which make society more tolerant of elder abuse and ignore the detrimental consequences faced by the elderly. However, the good news is that elder abuse can be prevented. Although few studies have been put forward on prevention of elder abuse, there is still hope for the elderly. This paper explains how social media can be used to prevent the pervasive problem of elder abuse.

Social media, the society, and prevention of elder abuse

Social media is a technology, which uses web-based techniques to offer information and create awareness on several issues. Social media can also be used as a tool that creates dialogue among front-line employees looking for support and professional assistance on how to stop elder abuse. Caregivers from rural areas and remote places often feel isolated, unappreciated and unmotivated in their profession. Continued communication among caregivers is important because they can share information, encourage each other and share updates on what is happening in their local areas. This is where social media comes in handy though avenues like "exploring the space between" (an experimental blog that invites communication for professional and caregivers for the elderly), "CHNET-Works" (a conference system for health professionals) and "USTREAM TV" (a live streaming resource used on various geographic levels). Chat services enable immediate and prompt communication between individuals and they can also share photos. This increases support for other caregivers and gives them an opportunity to obtain professional guidance from others. When caregivers and professionals who deal with the elderly connect, they can share information, which will be useful in eliminating elder abuse in the society (Cooper, Selwood & Livingston, 2008).

Currently, statistics indicate that more elderly people are using the Internet and social media than ever before. Statistics Canada (2011) reported that age is a significant factor in determining Internet use regardless of the other factors being taken into account such as income and education levels. In 2010 alone, 80% of Internet users over 45 years old were between 45 and 64 years. Those aged 65 and above were less likely to use the Internet and the percentage of Internet users declined with age (Kathryn & Mary, 2012). However, current statistics indicate that the elderly are increasingly using the Internet and social media, and they are the fastest growing category of Internet users. In a 2012 survey by American Life Project and the Pew Internet, 34% of those aged 65 and above used the Internet and another study by Ipsos Reid research firm indicated that 44% of those aged 55 and above used the Internet. Of the people who contribute to blog content, take part in discussions, upload photos and participate in social networking, 9% of them are aged between 55 and 65 (Ipsos, 2011). This trend is a clear indication that the Internet and social media is an important tool for creating awareness about elder abuse and offering advice through current support services (Kathryn & Mary, 2012).

Social media creates forums and groups where individuals can hold discussions, share information, communicate, and work together towards a common goal. Social media includes blogs, twitter and Facebook. People have the opportunity to share personal opinions and professional recommendations on blogs. Facebook gives individuals an opportunity to meet friends and create a group where people can form a network, which they use to share information, photos

Continued next page

and post updates. Twitter is a short instant messaging network, which gets updated immediately as a message is uploaded. These social networks are often free of charge and even if they have to charge, the cost is very little. They are also accessible from any place, at any time. Moreover, the elderly need to get awareness about what they should tolerate and what not to. For instance, a support group can start a blog, which posts articles or provides information that highlight behaviors and actions that the elderly should accept from caregivers and what they should report as abuse. This blog can offer advice and help to locals in knowing what is acceptable; hence, increasing awareness (Cooper, Selwood & Livingston, 2008).

The fundamental issue that has given birth to the spread of elder abuse in society is the negative attitude that people often carry towards the elderly. The first step is therefore, creating an atmosphere, which encourages a positive attitude towards the elderly. Many people, especially the youth have stereotypes, negative attitudes, and discrimination towards the elderly. The elderly are believed to be of no great significance to the society because they are thought to basically rely on others for physical assistance, housing, financial support, medical help, among others. Since they are physically frail and worn out, they have little control over their own life (including personal activities like physical hygiene, feeding, etc.) and are therefore believed to be of little value to the society. This reasoning affects the way relatives, caregivers, friends, and society as a whole treats the elderly (Kathryn & Mary, 2012).

Interventions that encourage people to have more respect and warmth for the elderly are a major step towards eradicating elder abuse. This comes in the form of public education where the social media is used to raise awareness of elder abuse in the society. Knowledgeable people make informed decisions, which are likely to bring transformation in the society. Movements that support the elderly have started campaigns and have groups online, which create awareness. Some important elements highlighted in these social networks are increasing respect for the elderly, seeing the valuable experiences, skills and abilities in the elderly people, and treating them as fellow human beings who can make a change in the society. Social media can also be important in increasing identification and the referral of elderly people who have been abused. This will make it easier to report a case of abuse or suspected abuse because all you would need to do is log in and post the information after which the support group can do a follow-up. This means that even if the person being abused is afraid of taking action, the support group can help them to bring the case to the attention of the authorities (Outreach Gide, 2013).

Everyone can participate in this fight; it can be as simple as liking a Facebook page for the fight against elder abuse or 'tweeting' your friends about it. You can post photos with elderly people with smiles to show your friends that older people are interesting and "older is wiser". You can make a poster about prevention of elder abuse and post it on your Facebook wall. Start an awareness group on your social network and invite friends to join. Inform your friends in your social networks about rallies, conferences or public forums on prevention of elder abuse. Chat with your online friends or group members and make arrangements to visit a local nursing home or a homebound senior adult and engage in games, picnic or a barbecue. Post articles in a blog about elder abuse prevention, mentioning the rights of the elderly and why they deserve better. Visit organizations featured in your social network and partner with them for more opportunities to collaborate and raise awareness for eradication of elder abuse.

Conclusion

It is hard to measure the effectiveness of social media in preventing elder abuse. However, the fundamental idea is to make an effort to challenge the negative attitudes that people have towards the elderly, increasing protection for the abused and informing people that such behavior is harmful to our aged generation and should not be tolerated. Social media provides numerous opportunities for caregivers, organizations, society, and the elderly themselves to take a stand against elder abuse. Visit organizations featured in your social network and partner with them for more opportunities to collaborate and raise awareness for eradication of elder abuse. All in all, older people must be given the opportunity to live in dignity, free

Continued next page

of exploitation and mistreatment, and participate in cultural, economic and spiritual activities.

ITALIAN JOURNAL: CALL FOR ARTICLES

Journal of Basic and Applied Sciences

About the Journal:
The journal covers the following disciplines: Agriculture, Biochemistry, Biotechnology, Botany, Chemistry, Computer Sciences, Environmental Sciences, Food Sciences, Genetics, Geography, Geology, Mathematics, Medical Sciences, Microbiology, Nano Science, Petroleum Technology, Pharmaceutical Sciences, Psychology, Physiology, Physics, Space Science, Statistics, Veterinary Sciences, Zoology.

The journal is published with the assistance of Lifescience Global, committed to publishing research rapidly online and providing a platform for worldwide dissemination using modern publishing model. The publisher is a member of CrossRef and its publications are indexed by chemical abstracts, CAB Abstracts, Index Copernicus, IMEMR and AsiaNet. The journal accepts original research papers, reviews and short communications.

If you are interested in contributing then please send your title or abstract of the manuscript by email or submit your full manuscript using the Online Manuscript Submission & Tracking System. Your manuscript will go through peer review process by experts in the area before final acceptance and publication. You may also contribute in other sections of the journal which you may find more relevant to your specific area of expertise.

Alzheimer's Disease and Dementia

(Past and Current Reserach)

Ludwig F. Lowenstein, Ph.D.
Southern England Psychological Services, UK

Abstract

This article seeks to investigate dementia via past and current research. The condition of Alzheimer Disease and dementia is described. The causes, incidence, and signs and repercussions of dementia are delineated. Finally, there is a brief section dealing with the diagnosis and treatment of the condition. Much needs to be done to identify early dementia and seek new and more effective treatment for this condition.

Introduction

It has long been known that people live longer now than in the past. This is partly due to the better medical services that they now have than they did in the past. It is also due to the attitude and behaviour or many individuals such as changing of lifestyles, including working longer, taking more exercise, eating more healthy foods, avoidance of smoking and reduction of alcohol intake etc. etc. Efforts have been made, without total success, in differentiating Alzheimer Disease from Vascular Dementia (Laukka et al., 2012). It was only found that those suffering from dementia deteriorated more quickly than those with Alzheimer Disease and that Alzheimer Disease is a form of dementia. Also included as forms of demential are vascular dementia, dementia with Lewy bodies and frontal temporal dementia.

Longer life means that many will reach their 80s and 90s and beyond. This naturally puts considerable pressure on the medical profession, Social Services and the relations of those having to care for those suffering from dementia. It also puts pressure on individual who may ultimately develop Alzheimer Disease. The two conditions, as already mentioned, are similar. Others consider them identical, due to similarities in their causes and symptoms, and the fact that like many causes they are difficult to prevent. Hence, there is a need for early detection via screening (Fowler, 2012). At this stage certain therapeutic strategies and medications can be used as soon as possible.

Little at present can be done except to try to slow down the condition for a time. This is because genetics plays such an important role in determining dementia (Williams, 2003). Therapeutic methods may be said to be working against genetic predispositions. Many individuals consider dementia a form of a 'death sentence'. Affected are the individual's memory and other cognitive functions. There are still many who hope that some form of genetic manipulation can in future improve the dismal ultimate outcome of deterioration.

Brain abnormalities in the form of tangles and plaques are responsible for the causes of dementia as well as high levels of zinc which affect memory and other functions. It is especially likely to affect short term memory or working memory, and less so long term memory. Long term memory can be divided into procedural memory and declarative memory. Procedural memory is still performed without needing to think, such as walking. Declarative memory involves remembering names, dates and other facts. Declarative memory is more affected than procedural memory by dementia.

Areas of the brain responsible for memory are the pre-frontal lobes and other important structures are the diencephalon including the mammillary bodies, the thalamus and hypothalamus. These organs transform short term memory into long term memory (Van der Flier et al., 2005). There are also chemical changes which occur in the brain including proteins that run amok.

Incidence of dementia

Being over the age of 65 is usually considered to be old age. There are however, many in society who function well and work successfully beyond that age and into their 80s. In the USA those deemed to be aged over 65 are 13% of the population. This constitutes an 11-fold increase since 1900 (Webster, 2005; Dietch, 2001). There are still a larger number of females that live longer than males by a ratio of 3:2. Hence dementia is more common in females. Only 2-5% of people under 65 suffer from dementia.

Repercussions of signs of developing dementia

Among the repercussions of growing older is the

Continued next page

greater susceptibility to illness, physical injuries, psychological stress (Nordhus & Nielson, 2005), a loss of hope due to becoming depressed and suicidal. Part of this is undoubtedly due to a lack of purpose and motivation after unwanted retirement (Inselmann, 2004).Many, at least 50% of individuals would benefit from mental health treatment, yet only 20% seek such help (Aldwin, Spiro & Park, 2006).

Gero-psychology or dealing with the mental health of aging is only 50 years old, but only 5% of clinicians work in this area (Birren & Schroots, 2001). The most common problems of the aged are depression, anxiety and substance abusing of their medication or alcohol (Biringer et al., 2005; Devanand, 2002). Depression is associated with feelings of hopelessness and having low self-esteem (Knight et al., 2006). Many of the elderly suffer from low self-esteem, emptiness and sleep disturbances including insomnia (Chong, 2005). They often suffer from loss of appetite, feeling guilty, and pessimistic (Nelson et al., 2005). Many experience trauma and loss such as the loss of a spouse, or other members of one's family, and friends (Alexopoulos, 2005; Freyne et al., 2005). It has been well established that the elderly recover less quickly from physical illnesses such as heart failure, hip and other fractures, pneumonia and other infections. The other aspect related to frequency of physical illness and depression are increased likelihood of feeling suicidal, and actually committing suicide (Preville et al., 2005; Fisher et al., 2001).

The suicide rate is 19 per 100,000 among the elderly in the United States. This is much higher than among the normal population. In the normal population it is 12 per 100,000. For those over the age of 85 the suicide rate is 65 per 100,000 (Fisher et al., 2001).

Another sign of dementia is a decline in cognitive ability, that is, intelligence and memory (Ancelin et al., 2012; Sorbi et al. 2012).This is due to frontal temporal lobe neuro-degeneration (Sperling & Johnson, 2012). Sometimes this is associated with Parkinson's, and Huntington's Disease. Decline in cognitive ability may be rapid as noted in 32.7% of cases (Sona et al., 2012).

Another development in some of the elderly, especially those who have a tendency towards substance abusing is the excessive use of medication and alcohol. This is used by them to reduce anxieties and stress (Jeste et al., 2005; Knight et al., 2006). The most common substance abuse is likely to be alcohol and the misuse of the patient's own medication in the form of prescription drugs (Beckman, Parker & Thorslund, 2005). These medications are often supplied by the medical profession not being aware of the tendency of the elderly to abuse their use.

Another reaction, but somewhat rarer, due to aging, is the development of psychotic symptoms or disorders. These include delusional disorders and schizophrenia (Fisher et al., 2001). These conditions frequently have been present before the aging process commenced. Such individuals also suffer from paranoid ideations such as feeling they are being persecuted, cheated, or maligned. This feeling is frequently expressed toward well intentioned family members.

Many suffer from cognitive disorders most especially short term memory deficits and attention (Hoyer & Verhaeghen, 2006) as well as delirium sometimes. This affects the capacity to concentrate, focus, attend and to think clearly (Kempler, 2005). Such individuals become confused about where they are and there can be frequent changes in their personality due to brain disease and stroke. Fewer than 1% suffer from dementia at aged 60, while 50% suffer from this condition after the age of 85 (Cowley, 2000). Other signs of dementia are poor judgement and suffering from disorientation, confusion, delusions and incoherent thinking. Eventually such individuals require almost constant care (Shenk, 2001). Fowler (2012) emphasizes the importance of screening the elderly in order to provide treatment as early as possible, this being either medication, psychological treatment, or both.

The DSM Checklist indicates that those suffering from dementia of the Alzheimer type also develop, in addition, memory loss, aphasia, apraxia, agnosia and executive functioning problems. Social and occupational functions also become impaired and there is a gradual decline in every day functioning. Early diagnosis of the condition is necessary to hold or slow down the process of deterioration (Getsios, et al., 2012; Genius, et al., 2012; Perneczky & Kurz, 2012).

Continued next page

Diagnosing dementia

A number of diagnostic assessments have been used to identify, as early as possible, those suffering from Alzheimer Disease. These include the Alzheimer Disease Knowledge Scale (ADKS) consisting of 30 true and false items covering risk factors, assessment and diagnosis symptoms. Another useful test is the Clinical Dementia Reading Sum of Boxes (CDR-SB) measuring the symptoms of Alzheimer Disease. Agreement on diagnosis is important in order to develop the most effective treatment approach possible (Zaleta et al., 2012).

Treating dementia and its effects

Other than medication, there is the use of multisensory training approaches which can be of value in slowing the ravages of dementia (Lippa, 2013). Many who suffer from Alzheimer Disease or another illness that causes dementia are cared for by their families. This however, is very demanding and stressful for the family members and there is the need to consider the emotional needs of these care-givers (Zarit & Talley, 2013).

Many investigators and researchers are currently seeking to curb the growing population of individuals suffering from dementia (Lyketsos & Miller, 2012; Naylor et al., 2012). Many researchers are currently looking for new innovative methods to prevent, delay and deal with dementia. One researcher who is undoubtedly optimistic has stated "Twenty years from now dementia as a disease may be a distant memory. The best is yet to come." (Reiman & Jagust, 2012). At this point in time however, there is still a heavy reliance on nursing homes and hospitals where 60% of these individuals spend their final days (Nichols, 2013).

The treatment of the depressed elderly consists mainly of the use of anti-depressant and other medication (Annweiler et al., 2012) as well as the use of statins (McGuiness et al., 2013). Cognitive therapy, interpersonal therapy, group therapy or an eclectic use of all of these approaches has also been of value (Knight et al., 2006). In some cases ECT or electroconvulsion therapy has also been used (Blazer, 2002), mainly to combat severe depression and tendencies towards suicide. One hopes current research will bring about a revolution in new therapeutic rehabilitation approaches.

ANGER: Heroic Idealism in Action

Ann M. O'Roark, Ph.D., ABAP
St. Augustine, Florida, USA
[Excerpt with author's permission]

What we love and what we get most angry about tells a tale of the hero within. Anger reveals our ideals, our goals, and our grand passions. Angers are indelible character markers. We go to war to defend beliefs and persons we cherish. We fill with outraged determination when an obstacle interrupts progress toward our goals.

The Anger Leitmotiv

Anger is a normal survival emotion. Yet, we treat anger as if it were Pandora's box. If we dare open it, to see what's inside, we believe we will let loose a horde of evils. That apprehension is not without reason. Court dockets are overloaded with testimony of negative consequences of anger. As far back as our earliest memories of elementary schooldays, we recall encounters with troublemakers who were quick to get mad and pick-a-fight. Children, at predictable ages, tend to take immediate action to resolve conflict or disappointment, fists flying, tears flowing, feet kicking. As adults, we hear news reports of how often anger is the motive for criminal acts.

Ironically, and appropriately, anger is described by some as the moral, judicial emotion. Anger motivates acts of heroism as well as acts of mayhem. Especially, when love is involved. Strong attachment, as in grand passion, inspires both grand arts and folk arts. Do Greek theater, Wagnerian opera, country pickin-music, and western guitar songs possibly have anything in common? Yes: Love, honor, anger, and death.

Judicial Anger in Greek Tragedy and Grand Ole Opry

Oedipus Rex, the tragic hero in a classic 5th century BC Greek drama, is remembered as a model leader-king, yet one who inadvertently killed his father and married his mother. In mid-life, Oedipus learned that the menacing traveler he battled to the death when he was a youth was actually the king of Thebes, the husband of the woman he later met and married, and a man whose murder he vowed to avenge to honor his bride. His shock deepened when he further learned that the king and queen of Thebes were the parents he had been separated from in infancy. Ethically-bound to carry out his pledge of vengeance, Oedipus gouged out his eyes and went into exile with his daughter to guide him. His wife committed suicide. A Freddie Kruger-Halloween plot of ancient times.

This story became a favorite example for psychoanalysts. It was elaborated into the Oedipus Complex, which is used to diagnose and explain a particular kind of love-anger conflict. This condition is diagnosed when a male child's attraction for the mother, innocent or not, is complicated by rivalry with, or anger toward the father. Another classic tragedy, based on events that took place more than a millennium later, is immortalized in the 18th century opera, *Tristan and Isolde,* where Wagner's love-honor-anger-and-death leitmotiv probed medieval erotic desire and death wishes of a heroic dragon slayer and a beautiful Irish princess. Later, in the opera *Parsifal*, Wagner dares compare emotional similarities of love as aroused in sexual experiences with religious experiences. He explores the subtleties of the diverting and perversion of emotions and, always, harsh consequences of denial of emotions.

Grand passions and perversions are no less traumatic among the poor and the untitled. From the stage at the Grand Ole Opry in Nashville, Tennessee and from roadhouse music-circuits, simple ballads passed down through ordinary folk are full of the tragic, the sadistic, and the forbidden. Country-singer Johnny Cash made Folsom prison famous as a homeplace of love-stricken suitors. Cash also sang about desire, anger, and death wishes -- homey tales of jealous rages, of murders of rivals, and of unobtainable loved-ones. Even before Johnny Cash topped the hit parade, two unextrordinary but ill-fated lovers, *Frankie and Johnny,* were immortalized in song and dance by Gene Kelly, who staged the now famous bluegrass ballad as a musical spectacular for the 1951 film, *American In Paris*. Kelly's fusion of life's common passages into memorably innovative contexts earned him a place in history books, and speaks volumes about universality of a love-anger connection.

Justified Anger

Passionate love endures in spite of, and sometimes because of, hardships, separations, and anger-arousing experiences. Such passion inspires the extraordinary in science as well as operas, ballads, and paintings. A love-anger motif became the driving force behind Marie Curie's efforts to extract radium from pitchblende. Madam Curie [1867-1934] loved her work and her teacher who, later, became her husband. Together, the Curies made discoveries that won them Nobel Prizes.

Yet, Marie's greatest work was done after her husband's tragic death. He was run over on a Paris street by a heavily loaded dray transporting commercial goods. Madam Curie's impassioned anger at this untimely loss had far-reaching consequences, inspiring her single-purposed dedication to completing their unfinished research. Her life of love, loss, sadness, anger, and purposeful work is a tale which could fit easily into Wagner's favorite plot: redemption through love. Her story equally well illustrates effective use of justified anger.

Justified Anger Is The Unsung-Hero Emotion

Anger receives little praise because it is a closet emotion. Stress researchers early-on found anger to be a hard-wired signal occurring in animals and humans, a distinctive neurochemical survival mechanism. Cannon was the first to associate anger with a biologically determined fight-or-flight response observed in all forms of life. Across the ages since prehistoric eras, adults had experiences that suggested it was best to avoid the painful, often irreparable consequences of fighting, at least with members of one's own tribe. Societies worked to eradicate or ignore the presence of anger. Children who showed their anger were quickly, sternly punished. A noticeable side effect of generations of effort to civilize angry behavior is under-appreciation of anger, and failure to recognize anger as a built-in problem detector.

Anger sends us signals that it's time to attend to justice, or love, or integrity. Anger's normal job is to increase chances of survival by adjusting attention to matters of immediate importance, and to work in concert with the two other stress emotions--curiosity and anxiety. Curiosity gets us moving and exploring, finding nourishment for body and mind, and anxiety keeps us from being foolishly naive, reminding us the duty officer on *Hill Street* Blues advises us to "be careful out-there on the street." Anger fires us up to be sure things are right for ourselves and our loved ones. Anger motivates us to pursue truth, beauty, and excellence.

In order to recover an appreciation for anger's intended beneficial function, it is necessary to look directly at anger, to acknowledge anger's presence and it's relationship to perfectionism, health, and happiness. We begin by taking a fresh look at anger. Everybody knows what anger is, even those who say that they never get angry. Everyone has experienced frustration, exasperation, and irritation.

Problems arise when anger is confused with hostility and aggression. Overlaps in the daily use of these terms contributes to a common misperception sometimes referred to as an *AHA Syndrome*. The acronym suggests Anger is automatically infused with Hostility and destined to culminate in acts of Aggression. In contrast, behavioral scientists make distinctions between anger and hostility. Hostility, like anger, is considered to be an emotional condition that can vary in intensity from annoyance to rage. But hostility, unlike anger, incorporates permissive attitudes toward destroying objects and injuring others. Hostility also involves disliking others and evaluating them negatively. Anger does not.

Aggression is behavior that results in punitive effects on persons or objects. Some aggressive acts are carried out to achieve desirable, generative outcomes. Harmful or destructive side effects are unintended. This type of goal-driven aggression is called "instrumental aggression" in contrast to "hostile aggression." Hostile aggression is behavior that is punitive, and sometimes destructive, proceeds out of negative evaluations. For example, sporting competitions that shift from competitive, instrumental-aggression into hostile-aggressive fighting are most likely to occur when team rivalries include a preconditioned hatred, contempt, or disrespect for the opposing group.

The fresh look at anger, in its natural form, shows it to be a survival emotion that motivates actions of innovators and idealists. Anger is a quality assurance emotion: *If I point out flaws when I see them; if I re-*

Continued next page

dress insults, then the good things of life can be won. Anger signals that quality of life is being threatened, and that corrective, sometimes punitive, action may be required.

Anger, recognized as a *stop-look-listen* message, means it is time to get clear about what we are expecting or are hoping for that is not happening. Stop and reassess the situation to be sure it is currently realizable and appropriate, or if it is an out of date expectation or objective. What is a reasonable goal in terms of fairness or improvement? Then, with that reasonable goal in mind, formulate an *instrumental* action plan, one that moves toward a constructive goal. Infusing Anger with Hope followed by Action produces a different kind of AHA Syndrome.

To re-claim the natural power [adrenal energy/ motivation] of the anger emotion involves the shift in expression of anger from the hostility to the hope mode. Experiences of anger, once acknowledged, are found to be neither a Pandora's box of evils nor a Medusa's head. We do not let loose a horde of horrors or turn into stone when we look deeply at anger. Instead, what researchers noticed is that anger experiences come in two related, but noticeably different ways. One, a broad-band signal, is called *angry temperament*, and the second, a personal protection signal, is called *angry reaction*. Individuals vary in their tendency to see a lot of situations as unfair, which is reflected by their reporting high or low levels of angry temperament. We also vary in the intensity of our reaction to being criticized, to not receiving recognition, or to being slowed down in pursuit of a goal. Angry reaction, while related to angry temperament, is triggered primarily by a perception of unfairness that strikes close to home-- nsults to the self.

More surprises awaited researchers who investigated what happens following an experience of anger. The expression of angry emotions has two separate, independent pathways. Anger expressed inwardly and anger expressed outwardly are not polar opposites of one trait. I could, for example, score high on one scale and not on the other, high on both scales, or low on both scales. Anger-in is when I know I am experiencing a mild to intensely angry emotion, but I do not express this directly to others. Anger-out is when I know I'm feeling angry emotion and I verbally or non -verbally let others know it. I speak-up, I strike others, I throw things.

The anger emotion impacts us in three ways -- mind, body and behavior. The experience starts with a mental signal that something is wrong. The autonomic nervous systems kicks into action and neurochemicals flow through the body. Energized by the emotional state, we shape mental conclusions [i.e., apperceptions] about the meaning of what we are perceiving. Finally we select a behavioral action. That action depends on available resources, knowledge, recent experiences, and creative thinking skill.

New ways of thinking about anger began with attention to stress, Type-A behavior, workaholics, and heart diseases. Surprise findings and subsequent changes in how researchers understood anger reshaped insights about longevity and vitality. Once anger proved to be the most salient emotional factor effecting heart disease patients, it wasn't long before scientific explorers mapped out topographic features of the emotion.

A scientific *Anger Box* replaces Pandora's Box to illustrate Spielberger's research findings about the experience and expression of angry emotions. Notice a strong separation of **state** from **trait** anger. State-anger describes variations of *intensity* of angry emotion being experienced in the present. Trait-anger looks at differences in the *frequency* that angry emotions are experienced in an extended time frame. State-anger may, or may not, reflect an individual's typical intensity of experience, and state intensity does not look at source or provocations of anger. State anger reflects *current circumstances*. Trait-anger suggests how often and how easily the **control** lid on anger **expression i**s likely to be raised. Trait anger does sort between generic provocations: Temperament-no specific provocation; and Reaction-receiving negative evaluation or being treated badly.

Since one person's boiling over point is likely to be quite different from another's, it became important to assess anger control. Measures reflect how much effort is expended to manage experiences of anger and subsequent expression of anger. Heroes who address every flaw, who always point out how things can be improved, may be acting out of love and loyalty, wanting only the best possible for others, push-

The Tyranny of Perfectionism

Few things in life attain the perfection of a first love. Few people fail to remember the first love-of-their-life. Frequently, it's a memory from high school years spiced with first kisses and first proms and first heartbreaks. Recalling first-loves may bring flash-backs of hard-won baseball games, or a shiny used-car, or frequently played tunes on a cherished guitar. Love at first sight may be best represented by the famous photograph showing sociologist Konrad Lorenz striding across a marshy field with a row of baby ducks following along behind him. Lorenz was the first thing these duckling saw when they opened their eyes, so they followed him wherever he went. Other new-born ducks follow a mother duck who is sitting by their eggs as they hatch.

First Impressions, Admirations, Irritations, and Trust

How long does a first impression influence where one goes? Some believe *reward-and-punishment* make the difference in how long a first love lasts. Others suggest it depends on the quality of trust in early relationships. Either way, a current reading of your early imprinting is easy: what do you most admire? What are you most proud of about yourself? What makes you angry? What about others irritates you most? Angers and irritations may give the best clues to deeper roots of your own characteristics.

Externally caused surprises, like falling and loud noises which Karen Horney said invoked the earliest experiences and expressions of anger, bring on internal feelings of disequilibria: Something is wrong. I must stop this. I must regain balance...must not fall. I must keep out the strong sounds. I must resist invasion. Why is someone/thing causing abuse to my body? It makes me angry.

Not everyone interprets imbalances or counter intuitive sensations as a call to aggressive behavior. Rather than instrumental or hostile acting-out, Einstein took a fresh approach to surprising external movement. Near the end of his life, he declared that his most happy moment came when he conceived of a man falling from the roof who simultaneously dropped an object he had been holding. As the man and the object continued to fall, the man was in motion, falling from the roof--yet he was in a state of non-motion or a stable, unchanging state in relationship to the object falling beside him at the same rate of speed. As a result, Einstein formulated his theory of relativity, a startling breakthrough in the science of physics, releasing scientists from Newtonian expectations. Visions of a dual state of being, without Einstein's insight, might generate more questions about one's sanity than about relativity.

Editing is Better than Denying

Like Einstein, we can control how we respond to our emotional signals. We can decide not to deny anger signals. We can *edit* how we behave after we get a surprising signal: *Something is not moving as expected. Perhaps it needs some fixing.* Or, even better, *we need to consider relativity*.

Denial may bring short term relief, but is long range trouble and reduces survival probabilities. Editing, on the other hand, maximizes survival potentials, in a relativity context. Editing responses to emotional signals involves intentional thinking about immediate actions compatible with future benefits for all.

This flow chart suggests it's best to accept sensations for what they are. Recognize when something is falling, invading, or moving in a surprising direction. Notice how anger can be used radar-like, to show when the ship is veering off-course. Never loosing sight of the fact that if anger is allowed to be king among emotions, to dominate curiosity and anxiety, then, anger's quality assurance perceptions can turn ugly. Or, if anger is allowed to disguise itself in robes of honorable perfectionism, it begins planting seeds of depression.

Anger and Depression In Second Generation Corporate Leaders

Harry Levinson, one of the wisest US therapists who worked primarily with executives, understood that depression and psychological illness is one of the most important problems associated with failures in corporations. He argues that understanding depression is the first step in resolving complex psychological issues inherited by second & third-generation leaders, especially in giant corporations. Levinson found that, too often, individuals groomed for succession leadership and even newly-hired talented technicians were vulnerable to depressive rage in the aftermaths of abrupt or dramatic changes in corporate operations.

Less than two years after the downsizing rush, popular management publications reported that reengineering advocates were reversing pattern and rushing to aid beleaguered staff in human resources departments. These once hard-nosed, time-task neo-Taylorites reported feeling pain, anger, and guilt. The corporate reengineers suffered emotions they denounced while arousing them in others.

Unattended Anger, Injustices, and Depressions are Dangerous

What's the problem with just ignoring the distress felt when something we advocate ardently doesn't turn out to be perfect? What's the cost of executive depression, burnout, heart attack, suicide? A classic example from the 1980's is Vincent Foster, the accomplished attorney who was deputy counsel to President Clinton. Psychological autopsy of this suicide suggests it was perfectionism that led to the depression that ended with a solitary gunshot. Yale's Sid Blatt describes Foster as a pillar of strength, a portrait of poise, and a person of impeccable integrity, someone who seemed outwardly successful in both his professional and personal life.

It was the intensity of his perfectionist standards and his vulnerability to personal and public criticism that allowed his inner voices to stalk him relentlessly. There were observable symptoms: He lost weight, his mood was low, he spent weekends in bed with the shades pulled, he told the graduating class at the University of Arkansas Law School a few months before his death that "The reputation you develop for intellectual and ethical integrity will be your greatest asset or your worst enemy."

Executive suicides represent an extreme resolution of severe depression. More frequently, high achievers survive the periods when they experienced some or all of the criteria used to diagnose major depression and the time of reduced productivity. Many more endure episodic experiences of one or two of the critical symptoms: diminished interest and pleasure; significant increase or decrease in weight; chronic fatigue; inability to sleep or over-sleeping; agitation; sense of worthlessness or guilt; reduced thinking or concentration abilities; thoughts of death.

Living in Beautiful Surroundings Is Not Protection from Machismo Thinking

In New Zealand, recently reported to have highest suicide rate in the industrialized world, it's the young men who are six times more likely to kill themselves. Analysts conclude that they are trying to conform to exaggerated standards of masculinity. They are expected to excel in school and in sports and to never give vent to their emotions. No wonder the families are often surprised by their suicides. Self-criticism, a key aspect of perfectionism, plays a central role in depressions and in suicide.

Blatt points out that Perfectionism, in some forms and to a certain degree, can contribute to high achievement. He suggests that perfectionism comes in three varieties: socially prescribed perfectionism, other-oriented perfectionism, and self-oriented perfectionism. Of the three, self oriented perfectionism is the one closely linked to executive effectiveness. High personal standards, a need for order and organi-

zation seem to go along with good work habits, striving, and high achievement. Executives with strong self oriented perfectionism characteristics, as in an active striving for improving performance to the point of being flawless, are typically managers who have been seen as resourceful and engaged in constructive problem solving activity. Executives who set high expectations and standards for others, Blatt's third face of perfectionism, when those expectations are realistic and presented in supportive ways, are identified as charismatic leaders and mentors in studies reported by Bernard Bass. They inspire others to achieve even more than they ever imagined they could achieve.

Beneficial vs Debilitative Perfectionism

Beneficial perfectionism, a condition found in hardy executives, is characterized by a sense of pleasure from painstaking effort, rather than a feeling of anger with oneself or others if an outcome is not perfect. These persons are flexible, adaptable leaders who seek excellence while being able to be less precise when necessary or appropriate. For example, an anonymous saying advises the busy person that "some things are worth not doing well."

Perfectionism coupled with fear of failure or with stressor conditions which limit the level or nature of achievement is a prelude to a number of disorders, especially depression. Negative conditions intensify when self-oriented perfectionism is influenced by socially prescribed perfectionism. The perfectionist harbors a belief, real or imagined, that others are expecting difficult or impossible achievements and will withhold acceptance or approval until these imposed demands are met. Such external expectations are felt to be uncontrollable. They generate, as in an experience of falling, feelings of anxiety, helplessness, and anger.

Debilitating perfectionism is found in persons who have excessive concern over mistakes, who perceive high parental expectations along with strong criticism, and who struggle with doubts about the quality of their actions. These people carry an intense need to avoid failure, nothing is quite good enough, and there is an endless cycle of over-striving and distress. Health problems linked to debilitating perfectionism, in addition to depression, are eating disorders, obsessive-compulsive disorders, anxiety, panic disorder, migraine, sexual dysfunction, and Type A Behavior.

Death, Divorce, Abandonment, Self-Criticism

Depressions that are not caused by chemical imbalances in the body are believed to be activated from two sources, either interpersonal relationships or self-definition issues. Inner questioning is either about *who we are*, or *who I am*. Depression arising from interpersonal relationships is often related to a loss of a significant other who was greatly depended upon. This type of depression can be noticed after a death of a significant other and after a divorce. Likewise, it underlies the abandonment experiences of employees fired or retired from companies after many years of employment. A second source of depression is associated with autonomous responsibility, self-criticism, and guilt. There is continuous harsh self-scrutiny and evaluation, plus a chronic fear of criticism. They make many demands upon themselves and are often highly competitive, with others and with themselves.

Assessments of health-care mid-level managers and of local pastors from two major Protestant denominations reflected higher-than-average levels of assessed trait anger. Both mid-level managers and local pastors reported noticeably higher anger levels when contrasted with executive level or regional administrative staff, who reported higher levels of trait anxiety. One explanation is that senior executives and administrators know that no one has neat solutions to industry or profession-wide issues, while new managers and professionals, frequently selected for front-line positions because they are fired-up go-getters, experience impatient frustration. They assume those in seats-of-power are hoarding information, or else they are incompetent to produce decisions on timely basis. *These executives and administrators are keeping me from doing perfect work*.

Helping-professionals and therapists coined and applied the term *burnout* to negative, depressive periods in the careers of professionals of all types. These intervention specialists determined that the way to reduce depressive episodes for professionals and executives is for organizational leaders to recognize the

symptoms of depression in persons like Vincent Foster, and use their authority to take action to provide assistance to individuals struggling against burnout or depression.

Too Little Control, Too Much Control Exact a Price

Type-A behavior patterns show that hard-driving individuals liked to gain and maintain control over their environment. Assessment of anger control shows that persons with high anger control scores are those who invest a great deal of energy in gaining and maintaining control over their expression of anger-in and, or out. If there is a high level of angry temperament, anger is predicted to show through as authoritarian behavior with deliberate use of expression of anger to intimidate others. On the other hand, observers and predictors, also see that excessive control can at times result in passivity. High anger-out control levels and high anxiety scores are also considered conducive to depressive states.

Suppressed anger, as measured on the anger-in scale, is associated with hypertension, especially in Black males. Interpretation of anger-in control is underway and is expected to also impact elevations in depression. A tendency to work hard at control of anger expression conforms to Pandora-Box beliefs about keeping anger in the closet. Excesses in anger control are not more prevalent in either male or female populations. Gender differences on anger measures do show up in questions about particular situations. Women experience more intense anger when criticized in front of others, and males are more angry when slowed by others mistakes. Men are much more likely to report expressing anger out physically or verbally, e.g. when I get angry I say nasty things.

While women generally seem more able to tolerate higher levels of anger without becoming ill, recurring patterns are similar in both gender groups. High trait anger, high anger control is associated with recurrence of breast cancer in women. A high trait anger, high angry reaction, and high anger-out is an at-risk factor for myocardial infarcts, heart attacks, and cardiovascular accidents, strokes. These later findings are not news when we recall the tale of Rip Van Winkle. This fictional New Englander got home after a 20 -year nap and learned that his ill-tempered wife had died of apoplexy. Internal physical disasters are known to happen in the wake of frequent and intense bouts of fury.

Fifty Plus Years of Investigation into Executive Stress

Specific insights into the role of anger in health have been a long time in the making. At the end of World War II the US male was twice as likely to be struck down by heart failure as a Dane, a Swede or a Norwegian, and five times as likely as a Japanese man. Deaths from strokes and heart attacks had risen from 20% in 1900 to 55% in the 1950s. The federal government launched the first longitudinal study of the causes of heart attacks. With more specific information about risk factors like tobacco use and cholesterol, the general public gradually became less fatalistic about heart diseases.

Changing behaviors--stopping smoking, exercising, watching the diet--was accepted as a means to preventing heart attacks in people with basic good health. Next came the study of nonphysical risk factors, and close attention to the fact that many heart disease patients were ambitious, competitive, and highly stressed. The direct comparison of Type As with Type Bs showed that over a period of eight-and-one-half years the Type As were more than twice as likely to suffer heart attacks as the Type Bs, even with other risk factors like cholesterol and smoking were taken into consideration. Major components were found to be the competitive way of life, the sense of time urgency, and an excessive involvement with one's job. Factors were refined to hostility, irritability, impatience, and competitiveness. Under scrutiny, the underlying factor distills into anger and its power to activate the autonomic nervous system.

Physiological Pathways from Anger to Heart Disease

Anger fires-up a signal that travels down the pituitary, hypothalamus, adrenal cortex pathway and puts into production excess catecholamine which in turn are what put the plaque on the inside of the blood vessels and give the heart a hard time. This is one way that perception of external irritation brings about internal actions that wear down and burnout physical beings. Other emotions collude with anger, to our det-

riment and to our benefit: Anxiety boosts the anger signal into a bigger wallop. Curiosity tones things down by revving up proteins in the brain and strengthening the auto-immune system.

Cynicism, an acquired attitude, is believed to stimulate production of additional fight-or-flight hormones [catecholamines, i.e., adrenalines] that accelerate buildup on artery walls, causing hardening of the arteries. Following the cynicism etiology school-of-reasoning, hostility questionnaires measure, primarily, mistrust. The assertion is that those who have untrusting hearts, who believe it is safer to trust nobody, who say "most people will tell a lie to get ahead," are, perhaps, not angry, just cynical. It's hard to believe that those who find it safer to trust nobody would not have an emotional history dominated by anger and anxiety. Darwin and Freud recognized that depression generally resulted from the interaction of anxiety and anger. Spielberger and Reheiser {2009) further trace the history of theory and research on depression, which carries symptoms that vary in severity and can include sadness, guilt, hopelessness, gloomy attitudes [cynicism] and even thoughts of suicide.

Disturbances of Normal Processes

Hostile aggression begins with a negative attitude about the object of the invasive behavior, a cynical attitude. Evaluating others negatively escalates the dislike, which is manifested in harmful ways as sanctioned by permissive attitudes toward destroying objects and injuring others. If anger is a neurochemical process proceeding from experiences of a hardwired emotion, then hostile aggression is an aberration of normal survival function. Normal processes gone haywire are examined for characterizing features and classified as disorders.

Classification of disturbances of natural processes, physical and mental, is not a new idea. Medical libraries are full of volumes describing the physical parts, their workings, their interactions, and their abnormalities. Mental workings and abnormalities are more recent targets of diagnostic and prognostic knowledge seekers. Four revisions with another in-process of the initial 1952 Diagnostic and Statistical Manual of Mental Disorders have been produced since 1968. While not one addresses anger directly, acute anger is frequently listed as a symptom and as a primary diagnostic criteria in a wide range of disorders -- affective, organic, neurotic, psychotic.

Panic Attacks

Panic attacks, an unpleasant and acute anxiety episode, offers a prototype for thinking about "anger attacks." Panic attacks, described frequently in popular magazines, are DSM listed as a unique anxiety disorder.

Symptoms include difficulty breathing, palpitations of the heart, chest pains, dizziness, hot and cold flashes, sweating, fainting, trembling, fear of dying or going crazy. A panic attack brings sudden and intense apprehension, fear, or terror. These moments occur unpredictably, yet may become attached to certain situations -- i.e., driving a car. The disorder often begins in late adolescence or early adult years. It may be limited to a single brief period, or become chronic. It is rarely incapacitating unless complicated by severe phobia, abuse of alcohol, or drugs and medications. Early warning clues are experiences of separation anxiety in childhood and or sudden loss of significant others.

Anger Attacks

Temper tantrums are recognized in children, and can continue as an adult behavior pattern. In an early consulting assignment, I learned about both the tantrum and the perfectionist. Contracted to provide organization development services, my monthly activities were periodically side-tracked to attend to special situations identified by the Vice-President. One month, I talked with a computer specialist who was kicking the main-frame computer and screaming at it several times a week. Another month, I spent time with a supervisor who was being heard down the hallways venting her anger at her staff. She berated them about inappropriately dressing for work and excessively wasting time.

The computer specialist was intentionally venting his frustration and anger in order to send a message upstairs that he wanted a new computer. The woman supervisor, with no daughters of her own, was unaware that her voice tone and affect conveyed anger at her young staffers. This supervisor-perfectionist

not only wanted to shape her employees into top performing employees. She wanted them to make a good appearance by being professionally well-groomed. Most of all, she wanted to protect them, fearing that they were at-risk wearing short, short skirts in the dominantly male environment of their heavy-industry workplace. She was trying to warn them that, at the very least, they could evoke insults and undesirable sexual attention. Of course, at her more settled, less adventuresome stage of life, she failed to see that attention from the male workers may have been an important goal for the younger women.

After those early assignments, I began to notice that my organizational consultation assignments frequently involved [a] cleaning-up after an employee's expression of anger and [b] communications training to prevent angry exchanges. Looking back, I see that many of the anger incidents I witnessed or intervened with were similar in many ways to panic attacks. Angry behaviors, however, in my experience, occurred more frequently in work settings than panic attacks and had more after effects than did panic attacks. I observed that:

Anger attacks include labored breathing, flaring of nostrils, narrowed eye focus, pounding of the heart, clenching of head, arm, and leg muscles, clutching of the chest, hot flashes, going cold, and loss of concern for personal safety, life, or others at risk, a tunnel vision awareness.

An anger attack begins with a sudden and intense sense of frustration, deprivation, or insult. These moments occur unpredictably, yet may attach to certain situations, e.g., an umpire's ruling in a baseball game. The disorder often begins in childhood or preadolescent years. Anger attacks may be limited to a single brief period, or become chronic. Anger attacks are rarely incapacitating unless complicated by particularized hostility, abuse of alcohol, drugs, or medication. Early warning clues that an anger attack is imminent can be similar to aura precursors of an epileptic seizure: onset of sensory hallucinations of smells, colors, or pains in parts of the body where tension is maintained, such as the jaw or the neck. Etiologies of chronic anger attacks include a history of severe parental punishment and / or criticism, sibling fighting, or severe deprivation in childhood and early life. Anger expression is influenced by family and social norms, and may be effected by genetic factors.

How Do I Love Thee? Let Me Count the Angers

Anger, like love, can be personal, professional, and generic, for example, as defined by erotic, filial, and agape types of love. Things that make us angry enough to take action at home, at work, or as a citizen reveal the hero within. Angers are indelible character markers of what it is that we value and love.

Examples of Filial and Agape Angers

Martin Luther King said, "I have a dream." A legendary Mexican contemporary, Don Juan was a very different type of visionary. Made famous in the writings of Carlos Castaneda, Don Juan understood individual, separate realities and taught the importance of controlled folly. King loved his kinfolk: filial love. Don Juan loved all folk: agape love. One advocated an instrumental, non-aggressive anger-out strategy for demonstrating ways of protecting and loving others. The second plumbed the depths of anger-in strategies, ways of controlling fascinations and frustrations that inhibit our ways of respecting and loving all life. King was angry about racial prejudice against his brothers. Don Juan was angry about social norms and biases that inhibit talent utilization, and respect for life potentials in each individual.

King, full of righteous *filial anger*, spoke about injustices done to people with black skin by people with white skin. He harnessed and channeled the anger of many people to move society toward the dream of equality, his goal was justice. Don Juan spoke of mastery over anger through intensive, individualized training. Don Juan's students were challenged to let go of externally imposed perspectives, and to train the powers within to extend their idiosyncratic capabilities into the world. He taught that cultivation of inner strength let's one achieve beyond ordinary expectations and goals. He was full of agape anger about people enslaved to things, people or ideas. Both were charismatic participators in the quest for quality of life.

Erotic Anger

Most of us fall somewhere between the activist and the individualist, and all of us have at least a glimpse of what personal, erotic anger is about. Freud's love-anger-deathwish notions make sense even for those who disagree with elaborate psychoanalytic assumptions and conclusions. For the less fatalistic, living beyond first impressions and first loves is a matter of putting new spins on emotional experiences. Anger signals a time-out for planning. Refocusing gets us to be at-rest with what's beside us, here and now. Like Einstein, we shift an internal sense of falling into one of moving relative to another person or object of our love or anger.

Concentration on goals, much like Marie Curie's determination to complete the research work she began with her husband, becomes a stabilizing influence as we adapt in response to anger's alert that it's time for a perceptual shift. Executives and managers who refuse to accept new goals, new technologies, new assignments are difficult, sometimes impossible, to motivate. They are using their anger to dig their heels in, to stay right where they are for the rest of their days. Some call it being in a rut, others consider it digging an early grave.

We know, first or second-hand, the debilitating consequences of a wrong choice in a career or in a marriage partner. Struggles come either way, staying in a bad job or marriage, and when divorcing or starting over. Over-estimating and relying on first impressions is a matter of doing more wishful thinking than data gathering. First impressions seldom include all relevant and accurate details. Mistaken first loves, as well as long-lasting loves, show themselves in our angers and too often lead to our sadness and depression, which in extreme situations culminate in suicide or hostile aggression.

As we live out our days in the non-stop stream of experiences, emotions, and behaviors, we can count on anger to be an informed ally bent on improving and perfecting things. We can tune into what our angry temperament and our angry reaction points out. We can edit our behavior, pausing the spontaneous flow of anger-out or anger-in long enough to determine the behavior that will maximize survival potentials when we lift the lid of the anger box.

Anger As Political Advisor: Constant Campaign for Justice, Fairness, Improvement

Beneficial anger in it's intended form keeps us from being walked on, abused by the systems around us, and increases our energy for achievement. Anger makes it possible for us to survive, to feel adequate, to grow, and to make meaningful contributions to life around us. In fact, our anger can be compared to a politician who runs for office every two, four, or six years, and knows staying relevant means being on a *constant campaign*. To hold your place of influence and get re-elected, the politician must be alert to what is lacking and needed, and must stay publically visible. Like anger, the elected official will be constantly pointing out what's wrong with the way things are in the present and how to make it better in the future.

> *Anger, like love, is a moral emotion...We are ambivalent about anger because sometimes it is effective and sometimes it is not, because sometimes it is necessary and sometimes it is destructive. . . anger is ultimately an emphatic message: Pay attention to me. I don't like what you are doing. Restore my pride. You're in my way. . . Give me justice.*

Establishing Forgiveness and Peace Gardens Around the Globe

Dr. Ani Kalayjian
ATOP Meaningfulworld, USA

Forgiveness is not an occasional act.
It is a permanent attitude.
Martin Luther King, Jr.

Although an abundance of peace organizations, non-governmental, as well as related university affiliations exist; conflict continues to flourish around the world. The roots of these conflicts and violence may be political, religious, territorial, tribal, generational, as well as those motivated by greed, rigidity, ego centrism, and shortsightedness. Since 1988 I have organized and delivered programs in over 45 countries to bring peace, conflict resolution, post trauma healing, forgiveness, and meaning-making through our organization, the Association for Trauma Outreach & Prevention, Meaningfulworld (www.meaningfulworld.com). We have noticed repeatedly that in spite of the establishment of a number of peace centered groups there are at least a handful of oppositional groups, or extremist groups being formed in opposition to another extremist group. In addition, many states have used extreme force, slavery, and violence in the name of peace and security.

Only in the Middle East, we have seen Israeli government building a wall all around Palestine and complicating and delaying the check points. We have also seen many Islamic extremist groups formed to defy these new developments. Similar oppositional groups are formed in Africa, such as in Kenya, Somalia, the Democratic Republic of Congo, and Burundi, all in the name of peace and security while destroying lives and ecology.

In addition to our educational and empowerment programs, we have recently integrated the establishment of Forgiveness and Peace Gardens around the world, in countries where we have collaborative centers and programs. These gardens have been welcomed as an alternative ecological connection, as well as a reinforcement of our educational programs. Forgiveness & Peace Gardens are a place where people can visit privately, or in a group, to renew their commitment to peace, and to be mindful of the importance forgiveness plays in establishing peace within, and all around. We can use these gardens to gather around and have educational, ecological, and emotional healing programs, especially on United Nations International Day of Peace annually 21 September. Peace begins in every individual, first on a personal level, and then spreads through our actions, behaviors, thoughts, and intentions. This extension happens both energetically as well as in learned and reinforced behaviors.

Many individuals, as well as States, are not mindful of inconsistencies they engage in; they may talk about, yet yell, hit, or destroy in anger and rage. If one's thoughts, actions and intentions are not harmonized we will not be able to establish peace on any level. We need to harmonize our head (thoughts), heart (intentions), and hands (actions) in order to be in peace.

Central to our educational programs is the 7-Step Integrative Healing Model (Kalayjian 2002, Sofletea & Kalayjian 2012). This innovative model incorporates various theories including: psychodynamic (Freud, 1910), interpersonal (Sullivan, 1953), existential and humanistic (Viktor Frankl, 1962), electromagnetic field balancing (EMF, Dubro & Lapierre, 2002), learning theory, ecology, forgiveness (Kalayjian & Paloutzian, 2010), flower fssences (Bach & other flower remedies), essential oils, physical release (yoga, martial arts), and mind-body-spirit chakra balancing exercises, prayers, meditation, indigenous rituals and celebration.

The 6th step of this Model integrates ecological principles of Mother Earth, for engendering inner peace, peace all around, as well as physical, mental & spiritual health. Creating gardens as sanctuaries is important to reconnect with Mother Nature and honor our presence in this world in harmony with our Mother. Whether we have a window seat, a terrace, a porch, a corner in our room, or a garden is irrelevant; instead, what matters is a corner that we create with thoughtfulness, intention, and love to house a work of art that celebrates our connection with the earth and our unconditional love. Our feelings of fear,

Continued next page

isolation, hopelessness, and uncertainty will decrease immensely once we establish and frequent this special sanctuary. We may explore a variety of themes, such as angels, flowers, wood, trees, bells, gongs, candles or colorful flags or scarves, with each theme representing an aspect of the earth. We need to be mindful to include something to represent love, something for passion, another for forgiveness, love, nurturing abundance, gratitude, and compassion.

Therefore, we are mindful of including 7 elements: Water, such as a fountain or running water; earth, such as a plant with a planter; fire, such as candles, wind, created with chimes; rocks and crystals, especially rose quartz, jade or turquoise; sculptures, representing peace and forgiveness, and incense. We have sown the seeds to create these ecological peaceful places for students, faculty, clinics, hospitals, and community centers in eight countries in the Middle East, Haiti and Africa. Community is invited to gather around the garden to engender inner peace, to help forgive oneself and others, to raise consciousness on being mindful of one's own feelings, managing and transforming negative feelings of anger, rage, envy, and greed, and replacing them with positive and uplifting feelings such as love, gratitude, forgiveness, empathy, compassion, abundance, and acceptance. These gardens will be in every house, in front of every university, secondary and primary schools and kindergartens, including in the slums, refugee centers, and other open community centers.

Garden description

The garden should be circular, representing natural space. Evergreen short bushes are to be placed all around to mark the circularity, which represents unity, as well as follows the shape of a medicine wheel. Large river stones or rocks could be placed around the perimeter for definition and grounding. A small cedar tree could be central. The following flowers and herbs are recommended, with special attention to perennials for their endurance and practicality.

- Hybrid Tea Roses, such as Peace, Pope John Paul II, Our Lady of Guadalupe, and Innocence
- Baby's Breath, to connect us with our innocence and purity of our heart
- Gardenias, for purity of purpose
- Magnolias, to activate our heart
- Allium Gigantean, for nurturing unity
- Gladiolas, for sincerity
- Bird of Paradise, central for meditation
- Iris, for appreciation of friendship and instilling hope
- Blue Scylla, for forgiveness
- Honey Suckle, for letting go
- Jasmine, for transformation
- Lily of the Valley, to open our heart to let love in
- Lilies in general, to strengthen our commitment to be the change we want to see,
- Larkspur, to open our heart even when we are in pain, and we have been hurt
- Clematis, for nurturing peaceful thoughts
- Hosta, for devotion to our inner health
- Yarrow, for healing
-

Other flowers could be added based on your garden's exposure to sun, type of soil, water needs, and season. I encourage you to add tulips, daffodils, crocus, iris, bergamot, butterfly catcher, bearberry bush, lobelia, evening primrose, poppies, mums, bachelor buttons, and so forth. Inside the circle I recommend to plant the following healing herbs: lavender, mint, rosemary, sage, thyme, and other local healing herbs.

Other flowers could be added based on your garden's exposure to sun, type of soil, water needs, and season. I encourage you to add tulips, daffodils, crocus, iris, bergamot, butterfly catcher, bearberry bush, lobelia, evening primrose, poppies, mums, bachelor buttons, and so forth. Inside the circle I recommend to plant the following healing herbs: lavender, mint, rosemary, sage, thyme, and other local healing herbs. If the Forgiveness and Peace Garden is within an institution, all departments would get involved in the establishment of this garden by donating one of the flowers or herbs mentioned above. The art department could be asked to conduct a contest for the best sculpture signifying peace and forgiveness. The winner's sculpture would be placed in the center of the garden with a plaque that states:

Meaningfulworld Ecology Project Forgiveness & Peace Garden (name of institution, city & state)

Brochures and informational material could be prepared to have an opening of the Forgiveness and Peace Garden, and press releases sent to the community at large, to disseminate this concept widely. Liaisons will be assigned to mentor community members on the importance of these gardens, how to start them in their homes, how to begin a practice of mindfulness for peace and forgiveness, and how to utilize these gardens in a meaningful way. Forgiveness is shifting from the automatic ego reaction (anger/self-protection, hurting back), to a non-reactive conscious response of empathy; considering that the other person is ALSO a human being, perhaps not mindful, and there is no peace without forgiveness (Kalayjian, 2010).

How to use the Forgiveness and Peace Garden

Meaningfulworld liaisons will mentor the community on how to use this garden daily for prayers, meditation, and a time for refuge, silence, renewal, commitment and mindfulness. This Forgiveness and Peace Garden could signify that no matter how challenging life circumstances become, we can surround ourselves with love, peaceful plants, herbs and flowers, and reinforce the importance of peace for our health, for generations of healthy people who are guided by peace, forgiveness and love. For forgiveness is not an innocent act of Pollyanna but rather is self-love above and beyond anything else, as well as love of others, engendering inner peace as well as peace all around us.

Gratitude: special gratitude to Antonia Gentile, Sandra Delcioppio, and Leysa Cerswell.

For further information on how to start your own garden contact the author Dr. Kalayjian at DrKalayjian@Meaningfulworld.com selective gardens would be displayed at our website: www.Meaningfulworld.com

Kitty Genovese Forum Convened in New York City

Harold Takooshian, Ph.D.
New York, New York, USA

On March 8-9, 2014, 150 people gathered in the rooftop conference center of Fordham University in New York City, to hear 24 experts address the "The Kitty Genovese Memorial Conference: 50 years later." These 24 speakers included journalists, scholars, activists, and Genovese family members--most of them meeting for the first time. Participants heard each expert speak with passion for 15 minutes, presenting their new information or insights, on one of three themes: (1) a celebration of young Kitty's life, (2) a re-examination of the facts in her senseless death, or (3) the many ways society has changed for the better after Kitty's tragedy.

When Kitty was fatally stabbed outside her New York City home at 3 am on March 13, 1964, her little-known death soon exploded into headlines world-wide, when journalist A.M. Rosenthal's bold book, THIRTY EIGHT WITNESSES, asked this simple question: "If many of Kitty's neighbors saw or heard her screaming for her life, why did none of them help her, or even phone the police in time?" Even a half-century later, we continue to learn new facts about Kitty and her iconic tragedy. Inexplicably, not one biography of Ms. Genovese has appeared these past 50 years--yet this conference included the voices of authors of at least five powerful new or forthcoming books this year about Kitty and her tragedy. A list of these books appears in the conference program, at http://file-id.org/140310/13688.

One question probed in this conference was whether knowledge of Kitty's tragedy has changed bystander behavior since 1964? A blog seeks people's views on this question, http://psyccritiquesblog.apa.org/2009/04/what-is-the-value-of-the-genovese-parable.html.

For any details, contact the forum's co-chairs: Attorney Joseph F. DeMay of New York City, or Professor Harold Takooshian of Fordham University, kgconf@gmail.com.

ICP, Inc. 2014 ANNUAL MEETING: JULY 13-15 PARIS, FRANCE

THEME: INTERNATIONAL PERSPECTIVES ON GLOBAL ISSUES

President-Elect and Scientific Program Chair: Dr. Janet Sigal

Part B: International Psychologist Spring 2014 Edition

By Dr. Ann Marie O'Roark, Editor
International Psychologist A/B

This Part B is intended to be used for longer reports and as a place for the ICP's Research Interest Groups to present their collaborative work. One expectation is that *IU* can be a linking pin between print media and electronic communications offered through the ICPWEB.ORG site. Dr. Varda Muhlbauer [Israel] is exploring ways with the help of new Director at Large Diana Boer [Germany] to implement a blog for scientific conversations and professional discussions, as well as using it for planning conference symposia and joint research projects.

We certainly hope that you will enjoy this ICP publication and consider contributing to future issues. This is a fine venue for sharing your work with others in our field.

CALL FOR MANUSCRIPTS

Please submit manuscripts using APA style, Word, 12 pt. Times New Roman to the Editor at annoroark@bellsouth.net. The *IU* is published two to four times yearly, according to the number of manuscripts received. An Editorial Review Panel reviews all material submitted for the International Psychologist for readability and consistency with ICP, Inc policies. *IU* submissions are screened for style and professional content. Submissions may be returned for revisions as needed. We invite your participation. While *IU* is not a formal journal, it may set the stage for re-activating *World Psychology.*

Helping Prevent Elder Abuse Globally Through the Use of Social Media

Richard Velayo, Ph.D. and Michael Trush
Pace University, New York City

Elder abuse is a single or continuous exploitative behavior, or failure to take an appropriate action (as expected) in a relationship, which involves trust, and eventually causes distress or psychological harm to an elderly person. This form of mistreatment can occur at home within a family, care givers/assistants, friends, etc. or in an institution such as a nursing home in the hands of a professional caregiver. Approximately 2.1 million elderly people in America are victims of elder abuse yearly. Neglect and failure to carry out a responsibility towards an elderly person are the most common forms of abuse. Other forms of abuse which often cause psychological and emotional harm include lack of respect and denying the elderly freedom (e.g. freedom of expression and doing what makes them happy like listening to music), controlling all their moves and making all decisions for them, threatening to withdraw care, bullying, financial exploitation (e.g. misappropriation of the wealth of an elderly person, exploiting their finances and depriving them the right to use their wealth as desired, denying them access to their property and giving them false reports regarding their wealth). Other forms of elder abuse include physical abuse like beat-

ing or slapping, unnecessary medical sedation, and physical restraint, as well as sexual abuse (Bagshaw, Wendt & Zannettino, 2007). This paper explores the various forms of elder abuse and how social media can be useful in reversing this vice.

Statistics indicate that women are more commonly the victims of elder abuse and perpetrators of this abuse are mostly men, particularly family members, partners or spouses. People aged 85 years and above are more likely to undergo elder abuse than those aged between 65 and 84. Moreover, exploitation increases as the health of victims deteriorates. Also, elderly people who have a lower socio-economic status are more likely to experience elder abuse. Other aspects like psychological disorders, physical injury, cognitive impairment, restricted mobility, fear of isolation, ignorance of their rights and social isolation can increase the risk of an elderly person being mistreated (Bagshaw, Wendt & Zannettino, 2007). Some individuals hold the belief that elderly people are weak, helpless and less significant in society. These are ageist attitudes, which make society more tolerant of elder abuse and ignore the detrimental consequences faced by the elderly. However, the good news is that elder abuse can be prevented. Although few studies have been put forward on prevention of elder abuse, there is still hope for the elderly. This paper explains how social media can be used to prevent the pervasive problem of elder abuse.

Social media, the society, and prevention of elder abuse

Social media is a technology, which uses web-based techniques to offer information and create awareness on several issues. Social media can also be used as a tool that creates dialogue among front-line employees looking for support and professional assistance on how to stop elder abuse. Caregivers from rural areas and remote places often feel isolated, unappreciated and unmotivated in their profession. Continued communication among caregivers is important because they can share information, encourage each other and share updates on what is happening in their local areas. This is where social media comes in handy though avenues like "exploring the space between" (an experimental blog that invites communication for professional and caregivers for the elderly), "CHNET-Works" (a conference system for health professionals) and "USTREAM TV" (a live streaming resource used on various geographic levels). Chat services enable immediate and prompt communication between individuals and they can also share photos. This increases support for other caregivers and gives them an opportunity to obtain professional guidance from others. When caregivers and professionals who deal with the elderly connect, they can share information, which will be useful in eliminating elder abuse in the society (Cooper, Selwood & Livingston, 2008).

Currently, statistics indicate that more elderly people are using the Internet and social media than ever before. Statistics Canada (2011) reported that age is a significant factor in determining Internet use regardless of the other factors being taken into account such as income and education levels. In 2010 alone, 80% of Internet users over 45 years old were between 45 and 64 years. Those aged 65 and above were less likely to use the Internet and the percentage of Internet users declined with age (Kathryn & Mary, 2012). However, current statistics indicate that the elderly are increasingly using the Internet and social media, and they are the fastest growing category of Internet users. In a 2012 survey by American Life Project and the Pew Internet, 34% of those aged 65 and above used the Internet and another study by Ipsos Reid research firm indicated that 44% of those aged 55 and above used the Internet. Of the people who contribute to blog content, take part in discussions, upload photos and participate in social networking, 9% of them are aged between 55 and 65 (Ipsos, 2011). This trend is a clear indication that the Internet and social media is an important tool for creating awareness about elder abuse and offering advice through current support services (Kathryn & Mary, 2012).

Social media creates forums and groups where individuals can hold discussions, share information, communicate, and work together towards a common goal. Social media includes blogs, twitter and Facebook. People have the opportunity to share personal opinions and professional recommendations on blogs. Facebook gives individuals an opportunity to meet friends and create a group where people can form a network, which they use to share information, photos

Continued next page

and post updates. Twitter is a short instant messaging network, which gets updated immediately as a message is uploaded. These social networks are often free of charge and even if they have to charge, the cost is very little. They are also accessible from any place, at any time. Moreover, the elderly need to get awareness about what they should tolerate and what not to. For instance, a support group can start a blog, which posts articles or provides information that highlight behaviors and actions that the elderly should accept from caregivers and what they should report as abuse. This blog can offer advice and help to locals in knowing what is acceptable; hence, increasing awareness (Cooper, Selwood & Livingston, 2008).

The fundamental issue that has given birth to the spread of elder abuse in society is the negative attitude that people often carry towards the elderly. The first step is therefore, creating an atmosphere, which encourages a positive attitude towards the elderly. Many people, especially the youth have stereotypes, negative attitudes, and discrimination towards the elderly. The elderly are believed to be of no great significance to the society because they are thought to basically rely on others for physical assistance, housing, financial support, medical help, among others. Since they are physically frail and worn out, they have little control over their own life (including personal activities like physical hygiene, feeding, etc.) and are therefore believed to be of little value to the society. This reasoning affects the way relatives, caregivers, friends, and society as a whole treats the elderly (Kathryn & Mary, 2012).

Interventions that encourage people to have more respect and warmth for the elderly are a major step towards eradicating elder abuse. This comes in the form of public education where the social media is used to raise awareness of elder abuse in the society. Knowledgeable people make informed decisions, which are likely to bring transformation in the society. Movements that support the elderly have started campaigns and have groups online, which create awareness. Some important elements highlighted in these social networks are increasing respect for the elderly, seeing the valuable experiences, skills and abilities in the elderly people, and treating them as fellow human beings who can make a change in the society. Social media can also be important in increasing identification and the referral of elderly people who have been abused. This will make it easier to report a case of abuse or suspected abuse because all you would need to do is log in and post the information after which the support group can do a follow-up. This means that even if the person being abused is afraid of taking action, the support group can help them to bring the case to the attention of the authorities (Outreach Gide, 2013).

Everyone can participate in this fight; it can be as simple as liking a Facebook page for the fight against elder abuse or 'tweeting' your friends about it. You can post photos with elderly people with smiles to show your friends that older people are interesting and "older is wiser". You can make a poster about prevention of elder abuse and post it on your Facebook wall. Start an awareness group on your social network and invite friends to join. Inform your friends in your social networks about rallies, conferences or public forums on prevention of elder abuse. Chat with your online friends or group members and make arrangements to visit a local nursing home or a homebound senior adult and engage in games, picnic or a barbecue. Post articles in a blog about elder abuse prevention, mentioning the rights of the elderly and why they deserve better. Visit organizations featured in your social network and partner with them for more opportunities to collaborate and raise awareness for eradication of elder abuse.

Conclusion

It is hard to measure the effectiveness of social media in preventing elder abuse. However, the fundamental idea is to make an effort to challenge the negative attitudes that people have towards the elderly, increasing protection for the abused and informing people that such behavior is harmful to our aged generation and should not be tolerated. Social media provides numerous opportunities for caregivers, organizations, society, and the elderly themselves to take a stand against elder abuse. Visit organizations featured in your social network and partner with them for more opportunities to collaborate and raise awareness for eradication of elder abuse. All in all, older people must be given the opportunity to live in dignity, free

of exploitation and mistreatment, and participate in cultural, economic and spiritual activities.

ITALIAN JOURNAL: CALL FOR ARTICLES

Journal of Basic and Applied Sciences

About the Journal:
The journal covers the following disciplines: Agriculture, Biochemistry, Biotechnology, Botany, Chemistry, Computer Sciences, Environmental Sciences, Food Sciences, Genetics, Geography, Geology, Mathematics, Medical Sciences, Microbiology, Nano Science, Petroleum Technology, Pharmaceutical Sciences, Psychology, Physiology, Physics, Space Science, Statistics, Veterinary Sciences, Zoology.

The journal is published with the assistance of Lifescience Global, committed to publishing research rapidly online and providing a platform for worldwide dissemination using modern publishing model. The publisher is a member of CrossRef and its publications are indexed by chemical abstracts, CAB Abstracts, Index Copernicus, IMEMR and AsiaNet. The journal accepts original research papers, reviews and short communications.

If you are interested in contributing then please send your title or abstract of the manuscript by email or submit your full manuscript using the Online Manuscript Submission & Tracking System. Your manuscript will go through peer review process by experts in the area before final acceptance and publication. You may also contribute in other sections of the journal which you may find more relevant to your specific area of expertise.

Alzheimer's Disease and Dementia

(Past and Current Reserach)

Ludwig F. Lowenstein, Ph.D.
Southern England Psychological Services, UK

Abstract

This article seeks to investigate dementia via past and current research. The condition of Alzheimer Disease and dementia is described. The causes, incidence, and signs and repercussions of dementia are delineated. Finally, there is a brief section dealing with the diagnosis and treatment of the condition. Much needs to be done to identify early dementia and seek new and more effective treatment for this condition.

Introduction

It has long been known that people live longer now than in the past. This is partly due to the better medical services that they now have than they did in the past. It is also due to the attitude and behaviour or many individuals such as changing of lifestyles, including working longer, taking more exercise, eating more healthy foods, avoidance of smoking and reduction of alcohol intake etc. etc. Efforts have been made, without total success, in differentiating Alzheimer Disease from Vascular Dementia (Laukka et al., 2012). It was only found that those suffering from dementia deteriorated more quickly than those with Alzheimer Disease and that Alzheimer Disease is a form of dementia. Also included as forms of demential are vascular dementia, dementia with Lewy bodies and frontal temporal dementia.

Longer life means that many will reach their 80s and 90s and beyond. This naturally puts considerable pressure on the medical profession, Social Services and the relations of those having to care for those suffering from dementia. It also puts pressure on individual who may ultimately develop Alzheimer Disease. The two conditions, as already mentioned, are similar. Others consider them identical, due to similarities in their causes and symptoms, and the fact that like many causes they are difficult to prevent. Hence, there is a need for early detection via screening (Fowler, 2012). At this stage certain therapeutic strategies and medications can be used as soon as possible.

Little at present can be done except to try to slow down the condition for a time. This is because genetics plays such an important role in determining dementia (Williams, 2003). Therapeutic methods may be said to be working against genetic predispositions. Many individuals consider dementia a form of a 'death sentence'. Affected are the individual's memory and other cognitive functions. There are still many who hope that some form of genetic manipulation can in future improve the dismal ultimate outcome of deterioration.

Brain abnormalities in the form of tangles and plaques are responsible for the causes of dementia as well as high levels of zinc which affect memory and other functions. It is especially likely to affect short term memory or working memory, and less so long term memory. Long term memory can be divided into procedural memory and declarative memory. Procedural memory is still performed without needing to think, such as walking. Declarative memory involves remembering names, dates and other facts. Declarative memory is more affected than procedural memory by dementia.

Areas of the brain responsible for memory are the pre-frontal lobes and other important structures are the diencephalon including the mammillary bodies, the thalamus and hypothalamus. These organs transform short term memory into long term memory (Van der Flier et al., 2005). There are also chemical changes which occur in the brain including proteins that run amok.

Incidence of dementia

Being over the age of 65 is usually considered to be old age. There are however, many in society who function well and work successfully beyond that age and into their 80s. In the USA those deemed to be aged over 65 are 13% of the population. This constitutes an 11-fold increase since 1900 (Webster, 2005; Dietch, 2001). There are still a larger number of females that live longer than males by a ratio of 3:2. Hence dementia is more common in females. Only 2-5% of people under 65 suffer from dementia.

Repercussions of signs of developing dementia

Among the repercussions of growing older is the

Continued next page

greater susceptibility to illness, physical injuries, psychological stress (Nordhus & Nielson, 2005), a loss of hope due to becoming depressed and suicidal. Part of this is undoubtedly due to a lack of purpose and motivation after unwanted retirement (Inselmann, 2004).Many, at least 50% of individuals would benefit from mental health treatment, yet only 20% seek such help (Aldwin, Spiro & Park, 2006).

Gero-psychology or dealing with the mental health of aging is only 50 years old, but only 5% of clinicians work in this area (Birren & Schroots, 2001). The most common problems of the aged are depression, anxiety and substance abusing of their medication or alcohol (Biringer et al., 2005; Devanand, 2002). Depression is associated with feelings of hopelessness and having low self-esteem (Knight et al., 2006). Many of the elderly suffer from low self-esteem, emptiness and sleep disturbances including insomnia (Chong, 2005). They often suffer from loss of appetite, feeling guilty, and pessimistic (Nelson et al., 2005). Many experience trauma and loss such as the loss of a spouse, or other members of one's family, and friends (Alexopoulos, 2005; Freyne et al., 2005). It has been well established that the elderly recover less quickly from physical illnesses such as heart failure, hip and other fractures, pneumonia and other infections. The other aspect related to frequency of physical illness and depression are increased likelihood of feeling suicidal, and actually committing suicide (Preville et al., 2005; Fisher et al., 2001).

The suicide rate is 19 per 100,000 among the elderly in the United States. This is much higher than among the normal population. In the normal population it is 12 per 100,000. For those over the age of 85 the suicide rate is 65 per 100,000 (Fisher et al., 2001).

Another sign of dementia is a decline in cognitive ability, that is, intelligence and memory (Ancelin et al., 2012; Sorbi et al. 2012).This is due to frontal temporal lobe neuro-degeneration (Sperling & Johnson, 2012). Sometimes this is associated with Parkinson's, and Huntington's Disease. Decline in cognitive ability may be rapid as noted in 32.7% of cases (Sona et al., 2012).

Another development in some of the elderly, especially those who have a tendency towards substance abusing is the excessive use of medication and alcohol. This is used by them to reduce anxieties and stress (Jeste et al., 2005; Knight et al., 2006). The most common substance abuse is likely to be alcohol and the misuse of the patient's own medication in the form of prescription drugs (Beckman, Parker & Thorslund, 2005). These medications are often supplied by the medical profession not being aware of the tendency of the elderly to abuse their use.

Another reaction, but somewhat rarer, due to aging, is the development of psychotic symptoms or disorders. These include delusional disorders and schizophrenia (Fisher et al., 2001). These conditions frequently have been present before the aging process commenced. Such individuals also suffer from paranoid ideations such as feeling they are being persecuted, cheated, or maligned. This feeling is frequently expressed toward well intentioned family members.

Many suffer from cognitive disorders most especially short term memory deficits and attention (Hoyer & Verhaeghen, 2006) as well as delirium sometimes. This affects the capacity to concentrate, focus, attend and to think clearly (Kempler, 2005). Such individuals become confused about where they are and there can be frequent changes in their personality due to brain disease and stroke. Fewer than 1% suffer from dementia at aged 60, while 50% suffer from this condition after the age of 85 (Cowley, 2000). Other signs of dementia are poor judgement and suffering from disorientation, confusion, delusions and incoherent thinking. Eventually such individuals require almost constant care (Shenk, 2001). Fowler (2012) emphasizes the importance of screening the elderly in order to provide treatment as early as possible, this being either medication, psychological treatment, or both.

The DSM Checklist indicates that those suffering from dementia of the Alzheimer type also develop, in addition, memory loss, aphasia, apraxia, agnosia and executive functioning problems. Social and occupational functions also become impaired and there is a gradual decline in every day functioning. Early diagnosis of the condition is necessary to hold or slow down the process of deterioration (Getsios, et al., 2012; Genius, et al., 2012; Perneczky & Kurz, 2012).

Continued next page

Diagnosing dementia

A number of diagnostic assessments have been used to identify, as early as possible, those suffering from Alzheimer Disease. These include the Alzheimer Disease Knowledge Scale (ADKS) consisting of 30 true and false items covering risk factors, assessment and diagnosis symptoms. Another useful test is the Clinical Dementia Reading Sum of Boxes (CDR-SB) measuring the symptoms of Alzheimer Disease. Agreement on diagnosis is important in order to develop the most effective treatment approach possible (Zaleta et al., 2012).

Treating dementia and its effects

Other than medication, there is the use of multisensory training approaches which can be of value in slowing the ravages of dementia (Lippa, 2013). Many who suffer from Alzheimer Disease or another illness that causes dementia are cared for by their families. This however, is very demanding and stressful for the family members and there is the need to consider the emotional needs of these care-givers (Zarit & Talley, 2013).

Many investigators and researchers are currently seeking to curb the growing population of individuals suffering from dementia (Lyketsos & Miller, 2012; Naylor et al., 2012). Many researchers are currently looking for new innovative methods to prevent, delay and deal with dementia. One researcher who is undoubtedly optimistic has stated "Twenty years from now dementia as a disease may be a distant memory. The best is yet to come." (Reiman & Jagust, 2012). At this point in time however, there is still a heavy reliance on nursing homes and hospitals where 60% of these individuals spend their final days (Nichols, 2013).

The treatment of the depressed elderly consists mainly of the use of anti-depressant and other medication (Annweiler et al., 2012) as well as the use of statins (McGuiness et al., 2013). Cognitive therapy, interpersonal therapy, group therapy or an eclectic use of all of these approaches has also been of value (Knight et al., 2006). In some cases ECT or electroconvulsion therapy has also been used (Blazer, 2002), mainly to combat severe depression and tendencies towards suicide. One hopes current research will bring about a revolution in new therapeutic rehabilitation approaches.

ANGER: Heroic Idealism in Action

Ann M. O'Roark, Ph.D., ABAP
St. Augustine, Florida, USA
[Excerpt with author's permission]

What we love and what we get most angry about tells a tale of the hero within. Anger reveals our ideals, our goals, and our grand passions. Angers are indelible character markers. We go to war to defend beliefs and persons we cherish. We fill with outraged determination when an obstacle interrupts progress toward our goals.

The Anger Leitmotiv

Anger is a normal survival emotion. Yet, we treat anger as if it were Pandora's box. If we dare open it, to see what's inside, we believe we will let loose a horde of evils. That apprehension is not without reason. Court dockets are overloaded with testimony of negative consequences of anger. As far back as our earliest memories of elementary schooldays, we recall encounters with troublemakers who were quick to get mad and pick-a-fight. Children, at predictable ages, tend to take immediate action to resolve conflict or disappointment, fists flying, tears flowing, feet kicking. As adults, we hear news reports of how often anger is the motive for criminal acts.

Ironically, and appropriately, anger is described by some as the moral, judicial emotion. Anger motivates acts of heroism as well as acts of mayhem. Especially, when love is involved. Strong attachment, as in grand passion, inspires both grand arts and folk arts. Do Greek theater, Wagnerian opera, country pickin-music, and western guitar songs possibly have anything in common? Yes: Love, honor, anger, and death.

Judicial Anger in Greek Tragedy and Grand Ole Opry

Oedipus Rex, the tragic hero in a classic 5th century BC Greek drama, is remembered as a model leader-king, yet one who inadvertently killed his father and married his mother. In mid-life, Oedipus learned that the menacing traveler he battled to the death when he was a youth was actually the king of Thebes, the husband of the woman he later met and married, and a man whose murder he vowed to avenge to honor his bride. His shock deepened when he further learned that the king and queen of Thebes were the parents he had been separated from in infancy. Ethically-bound to carry out his pledge of vengeance, Oedipus gouged out his eyes and went into exile with his daughter to guide him. His wife committed suicide. A Freddie Kruger-Halloween plot of ancient times.

This story became a favorite example for psychoanalysts. It was elaborated into the Oedipus Complex, which is used to diagnose and explain a particular kind of love-anger conflict. This condition is diagnosed when a male child's attraction for the mother, innocent or not, is complicated by rivalry with, or anger toward the father. Another classic tragedy, based on events that took place more than a millennium later, is immortalized in the 18th century opera, *Tristan and Isolde,* where Wagner's love-honor-anger-and-death leitmotiv probed medieval erotic desire and death wishes of a heroic dragon slayer and a beautiful Irish princess. Later, in the opera *Parsifal*, Wagner dares compare emotional similarities of love as aroused in sexual experiences with religious experiences. He explores the subtleties of the diverting and perversion of emotions and, always, harsh consequences of denial of emotions.

Grand passions and perversions are no less traumatic among the poor and the untitled. From the stage at the Grand Ole Opry in Nashville, Tennessee and from roadhouse music-circuits, simple ballads passed down through ordinary folk are full of the tragic, the sadistic, and the forbidden. Country-singer Johnny Cash made Folsom prison famous as a homeplace of love-stricken suitors. Cash also sang about desire, anger, and death wishes -- homey tales of jealous rages, of murders of rivals, and of unobtainable loved-ones. Even before Johnny Cash topped the hit parade, two unextrordinary but ill-fated lovers, *Frankie and Johnny,* were immortalized in song and dance by Gene Kelly, who staged the now famous bluegrass ballad as a musical spectacular for the 1951 film, *American In Paris*. Kelly's fusion of life's common passages into memorably innovative contexts earned him a place in history books, and speaks volumes about universality of a love-anger connection.

Justified Anger

Passionate love endures in spite of, and sometimes because of, hardships, separations, and anger-arousing experiences. Such passion inspires the extraordinary in science as well as operas, ballads, and paintings. A love-anger motif became the driving force behind Marie Curie's efforts to extract radium from pitchblende. Madam Curie [1867-1934] loved her work and her teacher who, later, became her husband. Together, the Curies made discoveries that won them Nobel Prizes.

Yet, Marie's greatest work was done after her husband's tragic death. He was run over on a Paris street by a heavily loaded dray transporting commercial goods. Madam Curie's impassioned anger at this untimely loss had far-reaching consequences, inspiring her single-purposed dedication to completing their unfinished research. Her life of love, loss, sadness, anger, and purposeful work is a tale which could fit easily into Wagner's favorite plot: redemption through love. Her story equally well illustrates effective use of justified anger.

Justified Anger Is The Unsung-Hero Emotion

Anger receives little praise because it is a closet emotion. Stress researchers early-on found anger to be a hard-wired signal occurring in animals and humans, a distinctive neurochemical survival mechanism. Cannon was the first to associate anger with a biologically determined fight-or-flight response observed in all forms of life. Across the ages since prehistoric eras, adults had experiences that suggested it was best to avoid the painful, often irreparable consequences of fighting, at least with members of one's own tribe. Societies worked to eradicate or ignore the presence of anger. Children who showed their anger were quickly, sternly punished. A noticeable side effect of generations of effort to civilize angry behavior is under-appreciation of anger, and failure to recognize anger as a built-in problem detector.

Anger sends us signals that it's time to attend to justice, or love, or integrity. Anger's normal job is to increase chances of survival by adjusting attention to matters of immediate importance, and to work in concert with the two other stress emotions--curiosity and anxiety. Curiosity gets us moving and exploring, finding nourishment for body and mind, and anxiety keeps us from being foolishly naive, reminding us the duty officer on *Hill Street* Blues advises us to "be careful out-there on the street." Anger fires us up to be sure things are right for ourselves and our loved ones. Anger motivates us to pursue truth, beauty, and excellence.

In order to recover an appreciation for anger's intended beneficial function, it is necessary to look directly at anger, to acknowledge anger's presence and it's relationship to perfectionism, health, and happiness. We begin by taking a fresh look at anger. Everybody knows what anger is, even those who say that they never get angry. Everyone has experienced frustration, exasperation, and irritation.

Problems arise when anger is confused with hostility and aggression. Overlaps in the daily use of these terms contributes to a common misperception sometimes referred to as an *AHA Syndrome*. The acronym suggests Anger is automatically infused with Hostility and destined to culminate in acts of Aggression. In contrast, behavioral scientists make distinctions between anger and hostility. Hostility, like anger, is considered to be an emotional condition that can vary in intensity from annoyance to rage. But hostility, unlike anger, incorporates permissive attitudes toward destroying objects and injuring others. Hostility also involves disliking others and evaluating them negatively. Anger does not.

Aggression is behavior that results in punitive effects on persons or objects. Some aggressive acts are carried out to achieve desirable, generative outcomes. Harmful or destructive side effects are unintended. This type of goal-driven aggression is called "instrumental aggression" in contrast to "hostile aggression." Hostile aggression is behavior that is punitive, and sometimes destructive, proceeds out of negative evaluations. For example, sporting competitions that shift from competitive, instrumental-aggression into hostile-aggressive fighting are most likely to occur when team rivalries include a preconditioned hatred, contempt, or disrespect for the opposing group.

The fresh look at anger, in its natural form, shows it to be a survival emotion that motivates actions of innovators and idealists. Anger is a quality assurance emotion: *If I point out flaws when I see them; if I re-*

Continued next page

dress insults, then the good things of life can be won. Anger signals that quality of life is being threatened, and that corrective, sometimes punitive, action may be required.

Anger, recognized as a *stop-look-listen* message, means it is time to get clear about what we are expecting or are hoping for that is not happening. Stop and reassess the situation to be sure it is currently realizable and appropriate, or if it is an out of date expectation or objective. What is a reasonable goal in terms of fairness or improvement? Then, with that reasonable goal in mind, formulate an *instrumental* action plan, one that moves toward a constructive goal. Infusing Anger with Hope followed by Action produces a different kind of AHA Syndrome.

To re-claim the natural power [adrenal energy/ motivation] of the anger emotion involves the shift in expression of anger from the hostility to the hope mode. Experiences of anger, once acknowledged, are found to be neither a Pandora's box of evils nor a Medusa's head. We do not let loose a horde of horrors or turn into stone when we look deeply at anger. Instead, what researchers noticed is that anger experiences come in two related, but noticeably different ways. One, a broad-band signal, is called *angry temperament*, and the second, a personal protection signal, is called *angry reaction*. Individuals vary in their tendency to see a lot of situations as unfair, which is reflected by their reporting high or low levels of angry temperament. We also vary in the intensity of our reaction to being criticized, to not receiving recognition, or to being slowed down in pursuit of a goal. Angry reaction, while related to angry temperament, is triggered primarily by a perception of unfairness that strikes close to home-- nsults to the self.

More surprises awaited researchers who investigated what happens following an experience of anger. The expression of angry emotions has two separate, independent pathways. Anger expressed inwardly and anger expressed outwardly are not polar opposites of one trait. I could, for example, score high on one scale and not on the other, high on both scales, or low on both scales. Anger-in is when I know I am experiencing a mild to intensely angry emotion, but I do not express this directly to others. Anger-out is when I know I'm feeling angry emotion and I verbally or non -verbally let others know it. I speak-up, I strike others, I throw things.

The anger emotion impacts us in three ways -- mind, body and behavior. The experience starts with a mental signal that something is wrong. The autonomic nervous systems kicks into action and neurochemicals flow through the body. Energized by the emotional state, we shape mental conclusions [i.e., apperceptions] about the meaning of what we are perceiving. Finally we select a behavioral action. That action depends on available resources, knowledge, recent experiences, and creative thinking skill.

New ways of thinking about anger began with attention to stress, Type-A behavior, workaholics, and heart diseases. Surprise findings and subsequent changes in how researchers understood anger reshaped insights about longevity and vitality. Once anger proved to be the most salient emotional factor effecting heart disease patients, it wasn't long before scientific explorers mapped out topographic features of the emotion.

A scientific *Anger Box* replaces Pandora's Box to illustrate Spielberger's research findings about the experience and expression of angry emotions. Notice a strong separation of **state** from **trait** anger. State-anger describes variations of *intensity* of angry emotion being experienced in the present. Trait-anger looks at differences in the *frequency* that angry emotions are experienced in an extended time frame. State-anger may, or may not, reflect an individual's typical intensity of experience, and state intensity does not look at source or provocations of anger. State anger reflects *current circumstances*. Trait-anger suggests how often and how easily the **control** lid on anger **expression i**s likely to be raised. Trait anger does sort between generic provocations: Temperament-no specific provocation; and Reaction-receiving negative evaluation or being treated badly.

Since one person's boiling over point is likely to be quite different from another's, it became important to assess anger control. Measures reflect how much effort is expended to manage experiences of anger and subsequent expression of anger. Heroes who address every flaw, who always point out how things can be improved, may be acting out of love and loyalty, wanting only the best possible for others, push-

The Tyranny of Perfectionism

Few things in life attain the perfection of a first love. Few people fail to remember the first love-of-their-life. Frequently, it's a memory from high school years spiced with first kisses and first proms and first heartbreaks. Recalling first-loves may bring flash-backs of hard-won baseball games, or a shiny used-car, or frequently played tunes on a cherished guitar. Love at first sight may be best represented by the famous photograph showing sociologist Konrad Lorenz striding across a marshy field with a row of baby ducks following along behind him. Lorenz was the first thing these duckling saw when they opened their eyes, so they followed him wherever he went. Other new-born ducks follow a mother duck who is sitting by their eggs as they hatch.

First Impressions, Admirations, Irritations, and Trust

How long does a first impression influence where one goes? Some believe *reward-and-punishment* make the difference in how long a first love lasts. Others suggest it depends on the quality of trust in early relationships. Either way, a current reading of your early imprinting is easy: what do you most admire? What are you most proud of about yourself? What makes you angry? What about others irritates you most? Angers and irritations may give the best clues to deeper roots of your own characteristics.

Externally caused surprises, like falling and loud noises which Karen Horney said invoked the earliest experiences and expressions of anger, bring on internal feelings of disequilibria: Something is wrong. I must stop this. I must regain balance...must not fall. I must keep out the strong sounds. I must resist invasion. Why is someone/thing causing abuse to my body? It makes me angry.

Not everyone interprets imbalances or counter intuitive sensations as a call to aggressive behavior. Rather than instrumental or hostile acting-out, Einstein took a fresh approach to surprising external movement. Near the end of his life, he declared that his most happy moment came when he conceived of a man falling from the roof who simultaneously dropped an object he had been holding. As the man and the object continued to fall, the man was in motion, falling from the roof--yet he was in a state of non-motion or a stable, unchanging state in relationship to the object falling beside him at the same rate of speed. As a result, Einstein formulated his theory of relativity, a startling breakthrough in the science of physics, releasing scientists from Newtonian expectations. Visions of a dual state of being, without Einstein's insight, might generate more questions about one's sanity than about relativity.

Editing is Better than Denying

Like Einstein, we can control how we respond to our emotional signals. We can decide not to deny anger signals. We can *edit* how we behave after we get a surprising signal: *Something is not moving as expected. Perhaps it needs some fixing.* Or, even better, *we need to consider relativity*.

Denial may bring short term relief, but is long range trouble and reduces survival probabilities. Editing, on the other hand, maximizes survival potentials, in a relativity context. Editing responses to emotional signals involves intentional thinking about immediate actions compatible with future benefits for all.

This flow chart suggests it's best to accept sensations for what they are. Recognize when something is falling, invading, or moving in a surprising direction. Notice how anger can be used radar-like, to show when the ship is veering off-course. Never loosing sight of the fact that if anger is allowed to be king among emotions, to dominate curiosity and anxiety, then, anger's quality assurance perceptions can turn ugly. Or, if anger is allowed to disguise itself in robes of honorable perfectionism, it begins planting seeds of depression.

Anger and Depression In Second Generation Corporate Leaders

Harry Levinson, one of the wisest US therapists who worked primarily with executives, understood that depression and psychological illness is one of the most important problems associated with failures in corporations. He argues that understanding depression is the first step in resolving complex psychological issues inherited by second & third-generation leaders, especially in giant corporations. Levinson found that, too often, individuals groomed for succession leadership and even newly-hired talented technicians were vulnerable to depressive rage in the aftermaths of abrupt or dramatic changes in corporate operations.

Less than two years after the downsizing rush, popular management publications reported that reengineering advocates were reversing pattern and rushing to aid beleaguered staff in human resources departments. These once hard-nosed, time-task neo-Taylorites reported feeling pain, anger, and guilt. The corporate reengineers suffered emotions they denounced while arousing them in others.

Unattended Anger, Injustices, and Depressions are Dangerous

What's the problem with just ignoring the distress felt when something we advocate ardently doesn't turn out to be perfect? What's the cost of executive depression, burnout, heart attack, suicide? A classic example from the 1980's is Vincent Foster, the accomplished attorney who was deputy counsel to President Clinton. Psychological autopsy of this suicide suggests it was perfectionism that led to the depression that ended with a solitary gunshot. Yale's Sid Blatt describes Foster as a pillar of strength, a portrait of poise, and a person of impeccable integrity, someone who seemed outwardly successful in both his professional and personal life.

It was the intensity of his perfectionist standards and his vulnerability to personal and public criticism that allowed his inner voices to stalk him relentlessly. There were observable symptoms: He lost weight, his mood was low, he spent weekends in bed with the shades pulled, he told the graduating class at the University of Arkansas Law School a few months before his death that "The reputation you develop for intellectual and ethical integrity will be your greatest asset or your worst enemy."

Executive suicides represent an extreme resolution of severe depression. More frequently, high achievers survive the periods when they experienced some or all of the criteria used to diagnose major depression and the time of reduced productivity. Many more endure episodic experiences of one or two of the critical symptoms: diminished interest and pleasure; significant increase or decrease in weight; chronic fatigue; inability to sleep or over-sleeping; agitation; sense of worthlessness or guilt; reduced thinking or concentration abilities; thoughts of death.

Living in Beautiful Surroundings Is Not Protection from Machismo Thinking

In New Zealand, recently reported to have highest suicide rate in the industrialized world, it's the young men who are six times more likely to kill themselves. Analysts conclude that they are trying to conform to exaggerated standards of masculinity. They are expected to excel in school and in sports and to never give vent to their emotions. No wonder the families are often surprised by their suicides. Self-criticism, a key aspect of perfectionism, plays a central role in depressions and in suicide.

Blatt points out that Perfectionism, in some forms and to a certain degree, can contribute to high achievement. He suggests that perfectionism comes in three varieties: socially prescribed perfectionism, other-oriented perfectionism, and self-oriented perfectionism. Of the three, self oriented perfectionism is the one closely linked to executive effectiveness. High personal standards, a need for order and organi-

zation seem to go along with good work habits, striving, and high achievement. Executives with strong self oriented perfectionism characteristics, as in an active striving for improving performance to the point of being flawless, are typically managers who have been seen as resourceful and engaged in constructive problem solving activity. Executives who set high expectations and standards for others, Blatt's third face of perfectionism, when those expectations are realistic and presented in supportive ways, are identified as charismatic leaders and mentors in studies reported by Bernard Bass. They inspire others to achieve even more than they ever imagined they could achieve.

Beneficial vs Debilitative Perfectionism

Beneficial perfectionism, a condition found in hardy executives, is characterized by a sense of pleasure from painstaking effort, rather than a feeling of anger with oneself or others if an outcome is not perfect. These persons are flexible, adaptable leaders who seek excellence while being able to be less precise when necessary or appropriate. For example, an anonymous saying advises the busy person that "some things are worth not doing well."

Perfectionism coupled with fear of failure or with stressor conditions which limit the level or nature of achievement is a prelude to a number of disorders, especially depression. Negative conditions intensify when self-oriented perfectionism is influenced by socially prescribed perfectionism. The perfectionist harbors a belief, real or imagined, that others are expecting difficult or impossible achievements and will withhold acceptance or approval until these imposed demands are met. Such external expectations are felt to be uncontrollable. They generate, as in an experience of falling, feelings of anxiety, helplessness, and anger.

Debilitating perfectionism is found in persons who have excessive concern over mistakes, who perceive high parental expectations along with strong criticism, and who struggle with doubts about the quality of their actions. These people carry an intense need to avoid failure, nothing is quite good enough, and there is an endless cycle of over-striving and distress. Health problems linked to debilitating perfectionism, in addition to depression, are eating disorders, obsessive-compulsive disorders, anxiety, panic disorder, migraine, sexual dysfunction, and Type A Behavior.

Death, Divorce, Abandonment, Self-Criticism

Depressions that are not caused by chemical imbalances in the body are believed to be activated from two sources, either interpersonal relationships or self-definition issues. Inner questioning is either about *who we are*, or *who I am*. Depression arising from interpersonal relationships is often related to a loss of a significant other who was greatly depended upon. This type of depression can be noticed after a death of a significant other and after a divorce. Likewise, it underlies the abandonment experiences of employees fired or retired from companies after many years of employment. A second source of depression is associated with autonomous responsibility, self-criticism, and guilt. There is continuous harsh self-scrutiny and evaluation, plus a chronic fear of criticism. They make many demands upon themselves and are often highly competitive, with others and with themselves.

Assessments of health-care mid-level managers and of local pastors from two major Protestant denominations reflected higher-than-average levels of assessed trait anger. Both mid-level managers and local pastors reported noticeably higher anger levels when contrasted with executive level or regional administrative staff, who reported higher levels of trait anxiety. One explanation is that senior executives and administrators know that no one has neat solutions to industry or profession-wide issues, while new managers and professionals, frequently selected for front-line positions because they are fired-up go-getters, experience impatient frustration. They assume those in seats-of-power are hoarding information, or else they are incompetent to produce decisions on timely basis. *These executives and administrators are keeping me from doing perfect work*.

Helping-professionals and therapists coined and applied the term *burnout* to negative, depressive periods in the careers of professionals of all types. These intervention specialists determined that the way to reduce depressive episodes for professionals and executives is for organizational leaders to recognize the

symptoms of depression in persons like Vincent Foster, and use their authority to take action to provide assistance to individuals struggling against burnout or depression.

Too Little Control, Too Much Control Exact a Price

Type-A behavior patterns show that hard-driving individuals liked to gain and maintain control over their environment. Assessment of anger control shows that persons with high anger control scores are those who invest a great deal of energy in gaining and maintaining control over their expression of anger-in and, or out. If there is a high level of angry temperament, anger is predicted to show through as authoritarian behavior with deliberate use of expression of anger to intimidate others. On the other hand, observers and predictors, also see that excessive control can at times result in passivity. High anger-out control levels and high anxiety scores are also considered conducive to depressive states.

Suppressed anger, as measured on the anger-in scale, is associated with hypertension, especially in Black males. Interpretation of anger-in control is underway and is expected to also impact elevations in depression. A tendency to work hard at control of anger expression conforms to Pandora-Box beliefs about keeping anger in the closet. Excesses in anger control are not more prevalent in either male or female populations. Gender differences on anger measures do show up in questions about particular situations. Women experience more intense anger when criticized in front of others, and males are more angry when slowed by others mistakes. Men are much more likely to report expressing anger out physically or verbally, e.g. when I get angry I say nasty things.

While women generally seem more able to tolerate higher levels of anger without becoming ill, recurring patterns are similar in both gender groups. High trait anger, high anger control is associated with recurrence of breast cancer in women. A high trait anger, high angry reaction, and high anger-out is an at-risk factor for myocardial infarcts, heart attacks, and cardiovascular accidents, strokes. These later findings are not news when we recall the tale of Rip Van Winkle. This fictional New Englander got home after a 20 -year nap and learned that his ill-tempered wife had died of apoplexy. Internal physical disasters are known to happen in the wake of frequent and intense bouts of fury.

Fifty Plus Years of Investigation into Executive Stress

Specific insights into the role of anger in health have been a long time in the making. At the end of World War II the US male was twice as likely to be struck down by heart failure as a Dane, a Swede or a Norwegian, and five times as likely as a Japanese man. Deaths from strokes and heart attacks had risen from 20% in 1900 to 55% in the 1950s. The federal government launched the first longitudinal study of the causes of heart attacks. With more specific information about risk factors like tobacco use and cholesterol, the general public gradually became less fatalistic about heart diseases.

Changing behaviors--stopping smoking, exercising, watching the diet--was accepted as a means to preventing heart attacks in people with basic good health. Next came the study of nonphysical risk factors, and close attention to the fact that many heart disease patients were ambitious, competitive, and highly stressed. The direct comparison of Type As with Type Bs showed that over a period of eight-and-one-half years the Type As were more than twice as likely to suffer heart attacks as the Type Bs, even with other risk factors like cholesterol and smoking were taken into consideration. Major components were found to be the competitive way of life, the sense of time urgency, and an excessive involvement with one's job. Factors were refined to hostility, irritability, impatience, and competitiveness. Under scrutiny, the underlying factor distills into anger and its power to activate the autonomic nervous system.

Physiological Pathways from Anger to Heart Disease

Anger fires-up a signal that travels down the pituitary, hypothalamus, adrenal cortex pathway and puts into production excess catecholamine which in turn are what put the plaque on the inside of the blood vessels and give the heart a hard time. This is one way that perception of external irritation brings about internal actions that wear down and burnout physical beings. Other emotions collude with anger, to our det-

riment and to our benefit: Anxiety boosts the anger signal into a bigger wallop. Curiosity tones things down by revving up proteins in the brain and strengthening the auto-immune system.

Cynicism, an acquired attitude, is believed to stimulate production of additional fight-or-flight hormones [catecholamines, i.e., adrenalines] that accelerate buildup on artery walls, causing hardening of the arteries. Following the cynicism etiology school-of-reasoning, hostility questionnaires measure, primarily, mistrust. The assertion is that those who have untrusting hearts, who believe it is safer to trust nobody, who say "most people will tell a lie to get ahead," are, perhaps, not angry, just cynical. It's hard to believe that those who find it safer to trust nobody would not have an emotional history dominated by anger and anxiety. Darwin and Freud recognized that depression generally resulted from the interaction of anxiety and anger. Spielberger and Reheiser {2009) further trace the history of theory and research on depression, which carries symptoms that vary in severity and can include sadness, guilt, hopelessness, gloomy attitudes [cynicism] and even thoughts of suicide.

Disturbances of Normal Processes

Hostile aggression begins with a negative attitude about the object of the invasive behavior, a cynical attitude. Evaluating others negatively escalates the dislike, which is manifested in harmful ways as sanctioned by permissive attitudes toward destroying objects and injuring others. If anger is a neurochemical process proceeding from experiences of a hardwired emotion, then hostile aggression is an aberration of normal survival function. Normal processes gone haywire are examined for characterizing features and classified as disorders.

Classification of disturbances of natural processes, physical and mental, is not a new idea. Medical libraries are full of volumes describing the physical parts, their workings, their interactions, and their abnormalities. Mental workings and abnormalities are more recent targets of diagnostic and prognostic knowledge seekers. Four revisions with another in-process of the initial 1952 Diagnostic and Statistical Manual of Mental Disorders have been produced since 1968. While not one addresses anger directly, acute anger is frequently listed as a symptom and as a primary diagnostic criteria in a wide range of disorders -- affective, organic, neurotic, psychotic.

Panic Attacks

Panic attacks, an unpleasant and acute anxiety episode, offers a prototype for thinking about "anger attacks." Panic attacks, described frequently in popular magazines, are DSM listed as a unique anxiety disorder.

Symptoms include difficulty breathing, palpitations of the heart, chest pains, dizziness, hot and cold flashes, sweating, fainting, trembling, fear of dying or going crazy. A panic attack brings sudden and intense apprehension, fear, or terror. These moments occur unpredictably, yet may become attached to certain situations -- i.e., driving a car. The disorder often begins in late adolescence or early adult years. It may be limited to a single brief period, or become chronic. It is rarely incapacitating unless complicated by severe phobia, abuse of alcohol, or drugs and medications. Early warning clues are experiences of separation anxiety in childhood and or sudden loss of significant others.

Anger Attacks

Temper tantrums are recognized in children, and can continue as an adult behavior pattern. In an early consulting assignment, I learned about both the tantrum and the perfectionist. Contracted to provide organization development services, my monthly activities were periodically side-tracked to attend to special situations identified by the Vice-President. One month, I talked with a computer specialist who was kicking the main-frame computer and screaming at it several times a week. Another month, I spent time with a supervisor who was being heard down the hallways venting her anger at her staff. She berated them about inappropriately dressing for work and excessively wasting time.

The computer specialist was intentionally venting his frustration and anger in order to send a message upstairs that he wanted a new computer. The woman supervisor, with no daughters of her own, was unaware that her voice tone and affect conveyed anger at her young staffers. This supervisor-perfectionist

not only wanted to shape her employees into top performing employees. She wanted them to make a good appearance by being professionally well-groomed. Most of all, she wanted to protect them, fearing that they were at-risk wearing short, short skirts in the dominantly male environment of their heavy-industry workplace. She was trying to warn them that, at the very least, they could evoke insults and undesirable sexual attention. Of course, at her more settled, less adventuresome stage of life, she failed to see that attention from the male workers may have been an important goal for the younger women.

After those early assignments, I began to notice that my organizational consultation assignments frequently involved [a] cleaning-up after an employee's expression of anger and [b] communications training to prevent angry exchanges. Looking back, I see that many of the anger incidents I witnessed or intervened with were similar in many ways to panic attacks. Angry behaviors, however, in my experience, occurred more frequently in work settings than panic attacks and had more after effects than did panic attacks. I observed that:

Anger attacks include labored breathing, flaring of nostrils, narrowed eye focus, pounding of the heart, clenching of head, arm, and leg muscles, clutching of the chest, hot flashes, going cold, and loss of concern for personal safety, life, or others at risk, a tunnel vision awareness.

An anger attack begins with a sudden and intense sense of frustration, deprivation, or insult. These moments occur unpredictably, yet may attach to certain situations, e.g., an umpire's ruling in a baseball game. The disorder often begins in childhood or preadolescent years. Anger attacks may be limited to a single brief period, or become chronic. Anger attacks are rarely incapacitating unless complicated by particularized hostility, abuse of alcohol, drugs, or medication. Early warning clues that an anger attack is imminent can be similar to aura precursors of an epileptic seizure: onset of sensory hallucinations of smells, colors, or pains in parts of the body where tension is maintained, such as the jaw or the neck. Etiologies of chronic anger attacks include a history of severe parental punishment and / or criticism, sibling fighting, or severe deprivation in childhood and early life. Anger expression is influenced by family and social norms, and may be effected by genetic factors.

How Do I Love Thee? Let Me Count the Angers

Anger, like love, can be personal, professional, and generic, for example, as defined by erotic, filial, and agape types of love. Things that make us angry enough to take action at home, at work, or as a citizen reveal the hero within. Angers are indelible character markers of what it is that we value and love.

Examples of Filial and Agape Angers

Martin Luther King said, "I have a dream." A legendary Mexican contemporary, Don Juan was a very different type of visionary. Made famous in the writings of Carlos Castaneda, Don Juan understood individual, separate realities and taught the importance of controlled folly. King loved his kinfolk: filial love. Don Juan loved all folk: agape love. One advocated an instrumental, non-aggressive anger-out strategy for demonstrating ways of protecting and loving others. The second plumbed the depths of anger-in strategies, ways of controlling fascinations and frustrations that inhibit our ways of respecting and loving all life. King was angry about racial prejudice against his brothers. Don Juan was angry about social norms and biases that inhibit talent utilization, and respect for life potentials in each individual.

King, full of righteous *filial anger*, spoke about injustices done to people with black skin by people with white skin. He harnessed and channeled the anger of many people to move society toward the dream of equality, his goal was justice. Don Juan spoke of mastery over anger through intensive, individualized training. Don Juan's students were challenged to let go of externally imposed perspectives, and to train the powers within to extend their idiosyncratic capabilities into the world. He taught that cultivation of inner strength let's one achieve beyond ordinary expectations and goals. He was full of agape anger about people enslaved to things, people or ideas. Both were charismatic participators in the quest for quality of life.

Erotic Anger

Most of us fall somewhere between the activist and the individualist, and all of us have at least a glimpse of what personal, erotic anger is about. Freud's love-anger-deathwish notions make sense even for those who disagree with elaborate psychoanalytic assumptions and conclusions. For the less fatalistic, living beyond first impressions and first loves is a matter of putting new spins on emotional experiences. Anger signals a time-out for planning. Refocusing gets us to be at-rest with what's beside us, here and now. Like Einstein, we shift an internal sense of falling into one of moving relative to another person or object of our love or anger.

Concentration on goals, much like Marie Curie's determination to complete the research work she began with her husband, becomes a stabilizing influence as we adapt in response to anger's alert that it's time for a perceptual shift. Executives and managers who refuse to accept new goals, new technologies, new assignments are difficult, sometimes impossible, to motivate. They are using their anger to dig their heels in, to stay right where they are for the rest of their days. Some call it being in a rut, others consider it digging an early grave.

We know, first or second-hand, the debilitating consequences of a wrong choice in a career or in a marriage partner. Struggles come either way, staying in a bad job or marriage, and when divorcing or starting over. Over-estimating and relying on first impressions is a matter of doing more wishful thinking than data gathering. First impressions seldom include all relevant and accurate details. Mistaken first loves, as well as long-lasting loves, show themselves in our angers and too often lead to our sadness and depression, which in extreme situations culminate in suicide or hostile aggression.

As we live out our days in the non-stop stream of experiences, emotions, and behaviors, we can count on anger to be an informed ally bent on improving and perfecting things. We can tune into what our angry temperament and our angry reaction points out. We can edit our behavior, pausing the spontaneous flow of anger-out or anger-in long enough to determine the behavior that will maximize survival potentials when we lift the lid of the anger box.

Anger As Political Advisor: Constant Campaign for Justice, Fairness, Improvement

Beneficial anger in it's intended form keeps us from being walked on, abused by the systems around us, and increases our energy for achievement. Anger makes it possible for us to survive, to feel adequate, to grow, and to make meaningful contributions to life around us. In fact, our anger can be compared to a politician who runs for office every two, four, or six years, and knows staying relevant means being on a *constant campaign*. To hold your place of influence and get re-elected, the politician must be alert to what is lacking and needed, and must stay publically visible. Like anger, the elected official will be constantly pointing out what's wrong with the way things are in the present and how to make it better in the future.

> *Anger, like love, is a moral emotion...We are ambivalent about anger because sometimes it is effective and sometimes it is not, because sometimes it is necessary and sometimes it is destructive. . . anger is ultimately an emphatic message: Pay attention to me. I don't like what you are doing. Restore my pride. You're in my way. . . Give me justice.*

Establishing Forgiveness and Peace Gardens Around the Globe

Dr. Ani Kalayjian
ATOP Meaningfulworld, USA

Forgiveness is not an occasional act.
It is a permanent attitude.
Martin Luther King, Jr.

Although an abundance of peace organizations, non-governmental, as well as related university affiliations exist; conflict continues to flourish around the world. The roots of these conflicts and violence may be political, religious, territorial, tribal, generational, as well as those motivated by greed, rigidity, ego centrism, and shortsightedness. Since 1988 I have organized and delivered programs in over 45 countries to bring peace, conflict resolution, post trauma healing, forgiveness, and meaning-making through our organization, the Association for Trauma Outreach & Prevention, Meaningfulworld (www.meaningfulworld.com). We have noticed repeatedly that in spite of the establishment of a number of peace centered groups there are at least a handful of oppositional groups, or extremist groups being formed in opposition to another extremist group. In addition, many states have used extreme force, slavery, and violence in the name of peace and security.

Only in the Middle East, we have seen Israeli government building a wall all around Palestine and complicating and delaying the check points. We have also seen many Islamic extremist groups formed to defy these new developments. Similar oppositional groups are formed in Africa, such as in Kenya, Somalia, the Democratic Republic of Congo, and Burundi, all in the name of peace and security while destroying lives and ecology.

In addition to our educational and empowerment programs, we have recently integrated the establishment of Forgiveness and Peace Gardens around the world, in countries where we have collaborative centers and programs. These gardens have been welcomed as an alternative ecological connection, as well as a reinforcement of our educational programs. Forgiveness & Peace Gardens are a place where people can visit privately, or in a group, to renew their commitment to peace, and to be mindful of the importance forgiveness plays in establishing peace within, and all around. We can use these gardens to gather around and have educational, ecological, and emotional healing programs, especially on United Nations International Day of Peace annually 21 September. Peace begins in every individual, first on a personal level, and then spreads through our actions, behaviors, thoughts, and intentions. This extension happens both energetically as well as in learned and reinforced behaviors.

Many individuals, as well as States, are not mindful of inconsistencies they engage in; they may talk about, yet yell, hit, or destroy in anger and rage. If one's thoughts, actions and intentions are not harmonized we will not be able to establish peace on any level. We need to harmonize our head (thoughts), heart (intentions), and hands (actions) in order to be in peace.

Central to our educational programs is the 7-Step Integrative Healing Model (Kalayjian 2002, Sofletea & Kalayjian 2012). This innovative model incorporates various theories including: psychodynamic (Freud, 1910), interpersonal (Sullivan, 1953), existential and humanistic (Viktor Frankl, 1962), electromagnetic field balancing (EMF, Dubro & Lapierre, 2002), learning theory, ecology, forgiveness (Kalayjian & Paloutzian, 2010), flower fssences (Bach & other flower remedies), essential oils, physical release (yoga, martial arts), and mind-body-spirit chakra balancing exercises, prayers, meditation, indigenous rituals and celebration.

The 6th step of this Model integrates ecological principles of Mother Earth, for engendering inner peace, peace all around, as well as physical, mental & spiritual health. Creating gardens as sanctuaries is important to reconnect with Mother Nature and honor our presence in this world in harmony with our Mother. Whether we have a window seat, a terrace, a porch, a corner in our room, or a garden is irrelevant; instead, what matters is a corner that we create with thoughtfulness, intention, and love to house a work of art that celebrates our connection with the earth and our unconditional love. Our feelings of fear,

isolation, hopelessness, and uncertainty will decrease immensely once we establish and frequent this special sanctuary. We may explore a variety of themes, such as angels, flowers, wood, trees, bells, gongs, candles or colorful flags or scarves, with each theme representing an aspect of the earth. We need to be mindful to include something to represent love, something for passion, another for forgiveness, love, nurturing abundance, gratitude, and compassion.
